1 Introduction

1.1 The Quality of Government Institute

The QoG Institute was founded in 2004 by Professor Bo Rothstein and Professor Sören Holmberg. It is an independent research institute within the Department of Political Science at the University of Gothenburg. The institute conducts research on the causes, consequences and nature of Good Governance and the Quality of Government (QoG) - that is, trustworthy, reliable, impartial, uncorrupted, and competent government institutions.

The main objective of the research is to address the theoretical and empirical problems of how political institutions of high quality can be created and maintained. A second objective is to study the effects of Quality of Government on a number of policy areas, such as health, environment, social policy, and poverty. While Quality of Government is the common intellectual focal point of the research institute, a variety of theoretical and methodological perspectives are applied.

1.2 The QoG Data

One aim of the QoG Institute is to make comparative data on QoG and its correlates publicly available. To accomplish this, we have compiled several datasets that draw on a number of freely available data sources, including aggregated individual-level data. The QoG datasets are available in several file formats making them usable in most statistical softwares as well as in Excel.

The QoG Standard dataset is our largest dataset consisting of approximately 2,000 variables. For those who prefer a smaller dataset, we provide the QoG Basic dataset, consisting of approximately the 300 most used variables from the QoG Standard dataset. We also provide a dataset called the QoG OECD dataset which covers OECD member countries and has high data coverage in terms of geography and time.

The Standard, Basic, and OECD datasets are all available in both time-series (TS) and cross-sectional (CS) versions, as separate datasets. In the TS datasets, the unit of analysis is country-year (e.g. Sweden-1984, Sweden-1985 and so on). The CS datasets, unlike the TS dataset, does not include multiple years for a particular country and the unit of analysis is therefore countries. Many of the variables are available in both TS and CS, but some are not. Each variable entry in this codebook specifies in which dataset you will find the variable.

The variables in the Standard, Basic, and OECD datasets are categorized in 18 thematic categories. This categorization should be seen as a guideline rather than a definite classification. Most variables belong only to one category, but some variables are categorized in more than one category.

On the QoG website we also provide three additional datasets. The QoG Expert Survey (2014), the QoG EU Regional dataset (2010 & 2013) and the QoG EQI dataset. The QoG Expert Survey is a dataset based on a survey among experts on public administration around the world. The data is available in an individual dataset and an aggregated dataset. The QoG EU Regional dataset is a dataset consisting of approximately 450 variables covering three levels of European regions. The EQI dataset is based on a survey among 34,000 respondents and concerns corruption on regional level within the EU.

Previous versions of all our datasets can be found in the Data Archive on the QoG website: <http://qog.pol.gu.se/data/datadownloads/data-archive>

1.3 QoG Standard Dataset

1.3.1 Cross-Sectional (CS)

In the QoG Standard CS dataset, data from and around 2013 is included. Data from 2013 is prioritized, however, if no data are available for a country for 2013, data for 2014 is included. If no data for 2014 exists, data for 2012 is included, and so on up to a maximum of +/- 3 years.

While this works fine for some variables, it does not for others. For GDP growth it might be far from ideal to use figures from the following or previous year, whereas it might be more or less unproblematic for bureaucratic structures, which are more stable and fluctuate less. We advise you to carefully read the codebook and use your own judgment when using the CS dataset.

In the description of each variable in this codebook, there are basic descriptive statistics (minimum year, maximum year and number of countries (N)) and a map indicating the countries that have data for that specific variable in the CS dataset. If the variable is not included in the CS dataset there is a text simply stating that this is the case. The maps should not be confused as visualizations of the data itself; they are only visualizations of the data availability in the dataset.

1.3.2 Time-Series (TS)

In the QoG Standard TS dataset, data from 1946 to 2016 are included and the unit of analysis is country-year (e.g. Sweden-1946, Sweden-1947 and so on).

As countries are not a static phenomenon, this has resulted in a number of what we call historical countries. Historical countries are in most cases denoted by a parenthesis, following the country name, and within the parenthesis we have added the to- date (e.g. Ethiopia (-1992)). Consequentially, the historical countries are often associated with a present-day version of the "same" country. These are also denoted by a parenthesis but within that parenthesis we have added the from-date (e.g. Ethiopia (1993-)). You will find more information on which countries this applies to, and our line of reasoning for each country, in the section on countries and time coverage.

We have decided not to include data that was available for a country before that country became independent according to our judgment. This is debatable; it might be argued that if an original source has included values, the values are correct and could be included. However, we have reasoned that if the datasets primarily are used in cross-country comparisons, all units should be independent countries and not, for example, semi-independent territories.

In each entry in this codebook there are basic descriptive statistics (minimum year, maximum year, number of countries (N), number of observations (n), average number of countries per year (\bar{N}) and average number of years per country (\bar{T})) and a bar graph indicating the number of countries with data available each year from 1946 to 2016. If the variable is not included in the TS dataset, there is a text simply stating that this is the case. These should not be confused as visualizations of the data itself; it is only visualizations of the data availability in the datasets.

1.3.3 Country and Time Coverage

When deciding which countries to include in the datasets, we have relied on the following reasoning:

We have included current members of the United Nations (UN) as well as previous members, provided that their de facto sovereignty has not changed substantially since they were members; this means that we, for example, have included Taiwan.

Using UN membership to decide whether or not to include a country in the dataset works quite well for cases from around 1955. Afterwards, independent states, in general, joined the UN following independence. This leaves us with the question of what to do with countries that might be said to have been independent some time during the period 1946 to around 1955, but were not independent after that period (such as Tibet). We have decided to include data for Tibet from 1946 to 1950, making it possible for users to decide for themselves whether to include Tibet in their analysis or not. It is worth noting that we do not use the date on which a country gained membership to the UN to decide when a country came into being, but to determine which countries to include. All in all, this means that we have 194 countries included in the cross-sectional dataset.

In the time-series dataset, we include the same 194 nations, plus an additional 17 historical countries that did not exist in 2013: Tibet, Pakistan pre 1971 (including East Pakistan, presently Bangladesh), North and South Vietnam, North and South Yemen, East and West Germany, Yugoslavia pre 1992 (the Peoples Republic of Yugoslavia), Serbia and Montenegro, the USSR, Czechoslovakia, Ethiopia pre 1993 (including Eritrea), France pre 1962 (including Algeria), Malaysia pre 1965

(including Singapore), Cyprus pre 1974 (including the later Turkish occupied north Cyprus) and Sudan pre 2012 (including South Sudan). This makes a total of 211 countries. In the Appendix we have included the full list of countries and a short note on how we have reasoned for each country.

Unfortunately, no established international standard exists on how historical cases, resulting either from country mergers or country splits, should be treated in a time-series setting. We have applied the following principles:

After a merger of two countries, the new country is considered a new case, even when the new state formed could be considered as a continuation of one of the merging states. This rule applies to: (1) Vietnam, which merged from North and South Vietnam in 1976; (2) Yemen, which merged from North and South Yemen in 1990; and (3) Germany, which merged from East and West Germany in 1990.

If a country has split, the new countries are considered new cases, even when one of the new states could be considered as a continuation of the state that split. This rule applies to: (1) Pakistan, which was split into Pakistan and Bangladesh in 1971; (2) the USSR, which was split into 15 Post-Soviet countries in 1991; (3) Yugoslavia, which was split into Slovenia, Croatia, Bosnia and Herzegovina, Macedonia, and Serbia and Montenegro in 1991; (4) Czechoslovakia, which was split into the Czech Republic and Slovakia in 1993; (5) France which was split into France and Algeria in 1962; (6) Malaysia which was split into Malaysia and Singapore in 1965; (7) Cyprus which was occupied by Turkey in 1974, effectively splitting the country into Cyprus and the internationally unrecognized northern Cyprus; and (8) Ethiopia, which was split into Ethiopia and Eritrea in 1993. There is one exception to this rule: Indonesia is considered a continuation of the country that existed before the independence of Timor-Leste in 2002 (while Timor-Leste is considered a new country).

Since most of the original data sources treat these cases of country mergers and splits differently, we have rearranged data in accordance with our criteria above. Consequently, if a merger or a split has occurred and a data source does not treat the countries as different cases, we consider them to be different cases.

To determine where to put the data for the year of the merger/split and when to include data for a newly independent country, we have relied on the July 1st-principle. If the merger/split or independence occurred after July 1st, the data for this year will belong to the historical country or it will not be included.

Thus, for example: If Germany in a data source is treated as a continuation of West Germany, we place data up to and including 1990 on West Germany and leave Germany blank until and including 1990, since the merger of Germany occurred in October 1990 (after July 1st, 1990). If, on the other hand, Serbia and Montenegro in a data source is treated as a continuation of Yugoslavia, we place the data up to and including 1991 on Yugoslavia and from 1992 and onward on Serbia and Montenegro (which is left blank until and including 1991), since the split occurred from June 1991-March 1992 (before July 1st, 1992).

Finally, Cyprus (1974-) denotes the Greek part of the island after the Turkish occupation. Most sources probably do the same with the data they refer to Cyprus, but the documentation of the original data rarely specifies this.

1.3.4 Note for Stata/IC Users

The Stata/IC has limitation in 2 047 variables. The QoG Standard datasets are bigger; therefore users of the Stata/IC cannot use these datasets in its original form. If you have access to Stata/IC, you can open only those variables of QoG Standard dataset that you need for studies.

First, you need to download the QoG Standard data file in .dta format to your computer. Then, open Stata/IC and write the following command in the command window and run it:

```
use list of variables using "C:\Link\to\file\filename.dta"
```

list of variables can be any of the following:

- list of all variable names (e.g. aid_cpnc fh_status vi_ext) that you need
- the prefixes of the data sources (e.g. bl_*, ciri_*) to open all variables from one or several data sources
- a range of variables (e.g. aid_cpnc-vi_ext).

Note: All list of prefixes and variable names are presented in the codebook. We recommend that you always add and open the identification variables: cname, ccode and year (for time-series).

1.3.5 A brief note on the QoG Standard 2017 update

To improve consistency and compatibility of statistical data related to QoG, we continuously work to improve the coverage and data quality. For the 2017 update of the QoG Standard Dataset, we have included three new data sources that previously were not part of the QoG datasets.

- The Bayesian Corruption Index. (Sherppa Ghent University)
- Environmental Treaties and Resources Indicators. (Earth Institute, Columbia University)
- Index of Public Integrity. (European Research Centre for Anti-Corruption and State-Building)

1.4 Thematic Categories

1.4.1 Quality of Government

This category includes variables that are the core features of QoG (impartiality, bureaucratic quality and corruption) as well as measures that are broader (rule of law and transparency).

1.4.2 Civil Society/Population/Culture

This category includes variables that relate to social capital, personal beliefs, size and distribution of the population as well as ethnic and linguistic fractionalization.

1.4.3 Conflict

This category includes variables concerning armed conflict, including civil war and terrorism, government revenue and spending related to violent conflict (military expenditure, arms imports, military personnel).

1.4.4 Education

This category includes a variety of indicators related to education, such as key characteristics of the educational system (public expenditure, gross enrollment, number of teachers), the students (age, gender, educational level), and educational outcomes (mean scores, literacy rates, numbers of researchers and scientists).

1.4.5 Energy and Infrastructure

This category includes indicators that cover descriptions of different energy sources (production, consumption and trade) and variables related to quality and quantity of different sectors of infrastructure (transportation and communication).

1.4.6 Environment

This category includes geographical characteristics such as the geographical region, land area etc. as well as indicators describing the state of the environment, ecosystems and materials, the impact of human beings on the environment, and environmental protection.

1.4.7 Health

This category includes indicators describing the health of a population of a given country. These include reports about self-perceived health (state of health), policies and provided infrastructure concerning health (expenditure, number of hospitals), the prevalence of diseases (HIV, tuberculosis), and indicators such as birth rate, death rate and life expectancy.

1.4.8 History

This category includes variables related to historical phenomena or situations, for example colonial origin, legal origin and GDP/capita year 1500.

1.4.9 Judicial

This category includes judicial indicators, generally covering legal rights granted by a state to its citizens and their compliance, as well as measures of crimes.

1.4.10 Labour Market

This category includes variables about employment, unemployment and union density rate, in general, as well as in subgroups of the population.

1.4.11 Media

This category includes indicators on the freedom of the media in a given country (freedom of the press, regulation of the media) as well as the public access and confidence in the media.

1.4.12 Migration

This category includes indicators related to migration and refugees.

1.4.13 Political Parties and Elections

This category includes variables describing various aspects of the legislature and political parties in the legislature (number of seats) as well as variables related to the election for the executive and variables on the outcomes of elections.

1.4.14 Political System

This category includes variables describing the rules of the political system (presidential or parliamentary system), the chief executive (years in office), regime type, stability (age of present regime), and checks and balances as well as aspects of federalism.

1.4.15 Public Economy

This category includes economic indicators that reflect the involvement of the government in the economy (taxes, tariff rates and government expenditures), economic key figures of a state (GDP, inflation, and economic inequality), and indicators that characterize the state of the economy (aid-flows, debt).

1.4.16 Private Economy

This category includes variables characterizing the private sector in a country, inter alia: regulation of the private sector, indicators concerning economic characteristics of groups in the society, such as poverty and household consumption, as well as tax rates.

1.4.17 Religion

This category includes variables regarding numbers of followers of specific religions and the status of religion in the constitution.

1.4.18 Welfare

This category includes indicators on government expenditure related to social welfare (pension, sickness coverage and accidents).

3 Identification Variables

3.0.1 ccode Country Code

Numeric country code based on the ISO-3166-1 standard. All the numeric country codes are unique and this is thus the variable best suitable to use when merging files (in combination with year for time-series data). (http://en.wikipedia.org/wiki/ISO_3166-1_numeric)

3.0.2 ccodealp 3-letter Country Code

3-letter country code based on the ISO-3166-1 alpha3 standard. Please note, the ccodealp variable does not uniquely identify all countries.

3.0.3 ccodealp_year 3-letter Country Code and Year

3-letter country code and year.

3.0.4 ccodecow Country Code COW

Country code from the Correlates of War.

3.0.5 ccodewb Country Code World Bank

Country code from the World Bank.

3.0.6 cname Country Name

The name of the country.

3.0.7 cname_year Country Name and Year

Country name and year.

3.0.8 version Version of the Dataset

Version of the QoG dataset.

3.0.9 year Year

Year.

4 Description of Variables by Original Data Sources

4.1 AidData

<http://aiddata.org/aiddata-research-releases>

(Tierney et al., 2011) (AidDataCore_ResearchRelease_Level1_v3.0 Research Releases dataset. Williamsburg, 2016)

(Data downloaded: 2016-09-21)

AidData v. 3.0 In addition to providing a searchable database of more than 1 million aid activities from the 1940s to present, AidData has assembled a set of datasets specifically for researchers. Three of these datasets are derived from AidData's core database: a 'Research Release' of all project-level records as of February 2013, a dataset of aggregate financial transfers between donors and recipients (generated from the February 2012 Research Release), and a dataset of aggregate financial transfers between individual financing agencies and recipients (generated from the February 2012 Research Release).

Note: The observations with year=9999 has been dropped.

4.1.1 aid_cpnc Number of Recipients to whom Commitments were provided (not incl. Int. Org.)

Number of Recipients to whom Commitments were provided, not including International Organizations

Min. Year:2010 Max. Year: 2013
N: 40

Min. Year:1962 Max. Year: 2013
N: 47 n: 1048 \bar{N} : 20 \bar{T} : 22

4.1.2 aid_cpsc Sum of Commitments provided to Recipients (not incl. Int. Org.)

Sum of Commitments provided to Recipients, not including International Organizations

Min. Year:2010 Max. Year: 2013
N: 40

Min. Year:1962 Max. Year: 2013
N: 47 n: 1048 \bar{N} : 20 \bar{T} : 22

4.1.3 aid_crnc Number of Donors from whom Commitments were received (not incl. Int. Org.)

Number of Donors from whom Commitments were received, not including International Organizations

Min. Year:2010 Max. Year: 2013
N: 148

Min. Year:1962 Max. Year: 2013
N: 196 n: 5711 \bar{N} : 110 \bar{T} : 29

4.1.4 aid_crnio Number of Int. Org. from whom Commitments were recieved

Number of International Organizations from whom Commitments were recieved

Min. Year:2010 Max. Year: 2013
N: 156

Min. Year:1947 Max. Year: 2013
N: 195 n: 6183 \bar{N} : 92 \bar{T} : 32

4.1.5 aid_crsc Sum of Commitments recieved from Donors (not incl. Int. Org.)

Sum of Commitments recieved from Donors, not including International Organizations

Min. Year:2010 Max. Year: 2013
N: 148

Min. Year:1962 Max. Year: 2013
N: 196 n: 5711 \bar{N} : 110 \bar{T} : 29

4.1.6 aid_crsio Sum of Commitments recieved from Int. Org.

Sum of Commitments recieved from International Organizations

Min. Year:2010 Max. Year: 2013
N: 156

Min. Year:1947 Max. Year: 2013
N: 195 n: 6183 \bar{N} : 92 \bar{T} : 32

4.2 Acemoglu, Johnson & Robinson

<http://economics.mit.edu/faculty/acemoglu/data/ajr2001>

(Acemoglu et al., 2001)

(Data downloaded: 2016-09-13)

Settler Mortality Data used in the article The Colonial Origins of Comparative Development: An Empirical Investigation.

4.2.1 ajr_settmort log settler mortality

Log of the mortality rate faced by European settlers at the time of colonization.

Note: The data for Ethiopia is used for both Ethiopia (-1992) and Ethiopia (1993-).

Min. Year:2013 Max. Year: 2013
N: 85

Min. Year:1946 Max. Year: 2016
N: 91 n: 5170 \bar{N} : 73 \bar{T} : 57

4.3 Alesina, Devleeschauwer, Easterly, Kurlat & Wacziarg

http://www.anderson.ucla.edu/faculty_pages/romain.wacziarg/papersum.html

(Alesina et al., 2003)

(Data downloaded: 2016-09-14)

Fractionalisation The variables reflect the probability that two randomly selected people from a given country will not share a certain characteristic, the higher the number the less probability of the two sharing that characteristic.

4.3.1 al_ethnic Ethnic Fractionalization

The definition of ethnicity involves a combination of racial and linguistic characteristics. The result is a higher degree of fractionalization than the commonly used ELF-index (see el_elf60) in for example Latin America, where people of many races speak the same language.

Min. Year:2013 Max. Year: 2013
N: 186

Min. Year:1946 Max. Year: 2015
N: 188 n: 10013 \bar{N} : 143 \bar{T} : 53

4.3.2 al_language Language Fractionalization

Reflects probability that two randomly selected people from a given country will not belong to the same linguistic group. The higher the number, the more fractionalized society.

Min. Year:2013 Max. Year: 2013
N: 180

Min. Year:1946 Max. Year: 2015
N: 181 n: 9585 \bar{N} : 137 \bar{T} : 53

4.3.3 al_religion Religion Fractionalization

Reflects probability that two randomly selected people from a given country will not belong to the same religious group. The higher the number, the more fractionalized society.

Min. Year:2013 Max. Year: 2013
N: 189

Min. Year:1946 Max. Year: 2015
N: 190 n: 10069 \bar{N} : 144 \bar{T} : 53

4.4 The Association of Religion Data Archives

<http://www.thearda.com/Archive/CrossNational.asp>
(Maoz & Henderson, 2013)
(Data downloaded: 2016-09-14)

World Religion Dataset: National Religion Dataset The World Religion Dataset (WRD) aims to provide detailed information about religious adherence worldwide since 1945. It contains data about the number of adherents by religion in each of the states in the international system. These numbers are given for every half-decade period (1945, 1950, etc., through 2010). Percentages of the states' populations that practice a given religion are also provided. (Note: These percentages are expressed as decimals, ranging from 0 to 1, where 0 indicates that 0 percent of the population practices a given religion and 1 indicates that 100 percent of the population practices that religion.) Some of the religions are divided into religious families. To the extent data are available, the breakdown of adherents within a given religion into religious families is also provided.

The project was developed in three stages. The first stage consisted of the formation of a religion tree. A religion tree is a systematic classification of major religions and of religious families within those major religions. To develop the religion tree a comprehensive literature review was prepared, the aim of which was (i) to define a religion, (ii) to find tangible indicators of a given religion or religious families within a major religion, and (iii) to identify existing efforts at classifying world religions. (Please see the original survey instrument to view the structure of the religion tree.) The second stage consisted of the identification of major data sources of religious adherence and the collection of data from these sources according to the religion tree classification. This created a dataset that included multiple records for some states for a given point in time. It also contained multiple missing data for specific states, specific time periods and specific religions. The third stage consisted of cleaning the data, reconciling discrepancies of information from different sources and imputing data for the missing cases.

The National Religion Dataset: The observation in this dataset is a state-five-year unit. This dataset provides information regarding the number of adherents by religions, as well as the percentage of the state's population practicing a given religion.

4.4.1 arda_angenpct Animist religions: Total (% Adherents)

Animist religions: Total (% Adherents).

Min. Year:2010 Max. Year: 2010

4.5 Sherppa Ghent University

<http://www.sherppa.ugent.be/BCI/BCI.html>

(Standaert, 2015)

(Data downloaded: 2016-10-25)

The Bayesian Corruption Index The Bayesian Corruption Index is a composite index of the perceived overall level of corruption: Corruption: With corruption, we refer to the "abuse of public power for private gain". Perceived corruption: Given the hidden nature of corruption, direct measures are hard to come by, or inherently flawed (e.g. the number of corruption convictions). Instead, we amalgamate the opinion on the level of corruption from inhabitants of the country, companies operating there, NGOs, and officials working both in governmental and supra-governmental organizations. Composite: It combines the information of 20 different surveys and more than 80 different survey questions that cover the perceived level of corruption.

It is an alternative to the other well-known indicators of corruption perception: the Corruption Perception Index (CPI) published by Transparency International and the Worldwide Governance Indicators (WGI) published by the World Bank. Methodologically, it is most closely related to the latter as the methodology used in the construction of the BCI can be seen as an augmented version of the Worldwide Governance Indicators' methodology.

The augmentation allows an increase of the coverage of the BCI: a 60% to 100% increase relative to the WGI and CPI, respectively. In addition, in contrast to the WGI or CPI, the underlying source data are entered without any ex-ante imputations, averaging or other manipulations. This results in an index that truly represents the underlying data, unbiased by any modeling choices of the composer.

4.5.1 bci_bci The Bayesian Corruption Indicator

The BCI index values lie between 0 and 100, with an increase in the index corresponding to a raise in the level of corruption. This is a first difference with CPI and WGI where an increase means that the level of corruption has decreased.

There exists no objective scale on which to measure the perception of corruption and the exact scaling you use is to a large extent arbitrary. However, we were able to give the index an absolute scale: zero corresponds to a situation where all surveys say that there is absolutely no corruption. On

the other hand, when the index is one, all surveys say that corruption is as bad as it gets according to their scale. This is another difference with CPI and WGI, where the scaling is relative. They are rescaled such that WGI has mean 0 and a standard deviation of 1 in each year, while CPI always lies between 0 and 100.

In contrast, the actual range of values of the BCI will change in each year, depending how close countries come to the situation where everyone agrees there is no corruption at all (0), or that corruption is as bad as it can get (100). By way of illustration, the figure below shows the histogram of the BCI in 2014. The country with the lowest level of corruption is New Zealand (15.4), while corruption is most problematic in Somalia (70.9).

The absolute scale of the BCI index was obtained by rescaling all the individual survey data such that zero corresponds to the lowest possible level of corruption and 1 to the highest one. We subsequently rescaled the BCI index such that when all underlying indicators are zero (one), the expected value of the BCI index is zero (one).

4.6 The World Conservation Union Red List of Threatened Species

http://www.iucnredlist.org/about/summary-statistics#Tables_5_6
(International Union for Conservation of Nature and Natural Resources, 2015)
(Data downloaded: 2016-09-21)

Red List of Threatened Species (version 2016.2) The IUCN Red List of Threatened Species is widely recognized as the most comprehensive, objective global approach for evaluating the conservation status of plant and animal species. From its small beginning, The IUCN Red List has grown in size and complexity and now plays an increasingly prominent role in guiding conservation activities of governments, NGOs and scientific institutions. The introduction in 1994 of a scientifically rigorous approach to determine risks of extinction that is applicable to all species, has become a world standard.

4.7 Bar-Ilan University

<http://www.religionandstate.org>
(Fox, 2011) (Fox, 2008) (Fox, n.d.)
(Data downloaded: 2016-09-14)

Religion and State Project The Religion and State (RAS) project is a university-based project located at Bar Ilan University in Ramat Gan, Israel. Its goal is to create a set of measures that systematically gauge the intersection between government and religion. Specifically, it examines government religion policy. The project's goals are threefold:

- To provide an accurate description of government religion policies worldwide.
- To create a tool which will lead to greater understanding of the factors which influence government religion policy.
- To provide the means to examine how government religion policy influences other political, social, and economic factors as well as how those factors influence government religion policy.

Round 2 of the RAS dataset, which is currently the official version available for download, measures the extent of government involvement in religion (GIR) or the lack thereof for 175 states on a yearly basis between 1990 and 2008. This constitutes all countries with populations of 250,000 or more as well as a sampling of smaller states. The data includes the following information:

Official Religion: A 15 value variable which measures the official relationship between religion and the state. This includes five categories of official religions and nine categories of state-religion relationships which range from unofficial support for a single religion to overt hostility to all religion.

Religious Support: This includes 51 separate variables which measure different ways a government can support religion including financial support, policies which enforce religious laws, and other forms of entanglement between government and religion.

Religious Restrictions: This includes 29 separate variables which measure different ways governments regulate, restrict, or control all religions in the state including the majority religion. This includes restrictions on religion's political role, restrictions on religious institutions, restrictions on religious practices, and other forms of regulation, control, and restrictions.

Religious Discrimination: This includes 30 types of restrictions that are placed on the religious institutions and practices of religious minorities that are not placed on the majority group. This includes restrictions on religious practices, restrictions on religious institutions and clergy, restrictions on conversion and proselytizing, and other restrictions.

The dataset also includes several sets of detailed variables measuring certain policies in depth. These topics include religious education, the registration of religious organizations, restrictions on abortion, restrictions on proselytizing, and religious requirements for holding public office or citizenship.

4.7.1 biu_girel Government Involvement in Religions

Official GIR (stands for government involvement in religions) measures the formal relationship between religion and the state. The variable is coded on the following scale:

0. **Specific Hostility:** Hostility and overt persecution of religion where state ideology specifically singles out religion in general or religion is in some other way uniquely singled out for persecution. (i.e. the ex USSR)
1. **State Controlled Religion, Negative Attitude:** The state controls all religious institutions and discourages religious expression outside of those institutions. This is part of the state's policy of maintaining social control or keeping religion in check rather than due to ideological support for religion.
2. **Nonspecific Hostility:** While the state is hostile to religion, this hostility is at about the same level as state hostility to other types of non-state organizations. Religion is not singled out.
3. **Separationist:** Official separation of Church and state and the state is slightly hostile toward religion. This includes efforts to remove expression of religion by private citizens from the public sphere.
4. **Accommodation:** Official separation of church and state and the state has a benevolent or neutral attitude toward religion in general.
5. **Supportive:** The state supports all religions more or less equally.
6. **Cooperation:** The state falls short of endorsing a particular religion but certain religions benefit from state support more than others. (Such support can be monetary or legal)
7. **Multi-Tiered Preferences 2:** two or more religions are clearly preferred by state, receiving the most benefits, there exists one or more tiers of religions which receive less benefits than the preferred religions but more than some other religions.
8. **Multi-Tiered Preferences 1:** one religion is clearly preferred by state, receiving the most benefits, there exists one or more tiers of religions which receive less benefits than the preferred religion but more than some other religions.
9. **Preferred Religion:** While the state does not officially endorse a religion, one religion serves unofficially as the state's religion receiving unique recognition or benefits. Minority religions all receive similar treatment to each other.
10. **Historical or Cultural State Religion:** There is an official religion but it is mostly due to historical or cultural inertia.
11. **Active State Religion:** State actively supports religion but the religion is not mandatory and the state does not dominate the official religion's institutions.
12. **State Controlled Religion, Positive Attitude:** The state both supports a religion and substantially controls its institutions but has a positive attitude toward this religion.

- 13. Religious State 2: Religion mandatory for members of official religion.
- 14. Religious State 1: Religion mandatory for all.

N: 175 n: 3235 \bar{N} : 170 \bar{T} : 18

4.7.2 biu_offrel Official Religion

Official Religion measures whether the government has an established religion. For a religion to be established there must be a constitutional clause, a law, or the equivalent explicitly stating that a specific religion or specific religions are the official religions of that state. This variable is coded on the following scale:

- 0. The State has no official religion
- 1. The state has multiple established religions
- 2. The state has one established religion

Variable not included
in Cross-Section Data

Min. Year:1990 Max. Year: 2008
N: 175 n: 3235 \bar{N} : 170 \bar{T} : 18

4.7.3 biu_offres Official Restrictions of Religions

Official Restrictions measures the extent to which, in practice, a state is willing to restrict some or all religions. This variable is necessary because support for a religion or some religions does not mean a state does not restrict or ban others. For example, while Iran, Saudi Arabia, and the UK all have official religions, the legal status of minority religions in these states is not at all the same. The word "other" is in parentheses because in some cases this refers to all religions while in others it refers to minority religions. The variable is coded on the following scale:

- 0. No (other) religions are illegal and there are no significant restrictions on minority religions.
- 1. No religions are illegal and no limitations are places on them but some religions have benefits not given to others due to some form of official recognition or status not given to all religions.
- 2. No religions are illegal but some or all (other) religions have practical limitations placed upon them.
- 3. No religions are illegal but some or all (other) religions have legal limitations placed upon them.
- 4. Some (other) religions or atheism are illegal.
- 5. All (other) religions are illegal

4.8 Barro & Lee

<http://www.barrolee.com/>
(Barro & Lee, 2013)
(Data downloaded: 2016-09-07)

Educational Attainment Dataset The Barro-Lee Data set provide data disaggregated by sex and and by 5-year age intervals. It provides educational attainment data for 146 countries in 5-year intervals from 1950 to 2010. It also provides information about the distribution of educational attainment of the adult population over age 15 and over age 25 by sex at seven levels of schooling - no formal education, incomplete primary, complete primary, lower secondary, upper secondary, incomplete tertiary, and complete tertiary. Average years of schooling at all levels - primary, secondary, and tertiary - are also measured for each country and for regions in the world. Aside from updating and expanding our previous estimates (1993, 1996, and 2001), we improve the accuracy of estimation in the current version by using more information and better methodology. To reduce measurement error, the new estimates are constructed using recently available census/survey observations from consistent census data, disaggregated by age group, and new estimates of mortality rate and completion rate by age and by education.

4.9 Carles Boix, Michael K. Miller, and Sebastian Rosato (2013)

<https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10.7910/DVN/28468>

(Boix & Rosato, 2012)

(Data downloaded: 2016-09-16)

Boix-Miller-Rosato Dichotomous Coding of Democracy, Version 2.0 This data set provides a dichotomous coding of democracy. Authors define a country as democratic if it satisfies conditions for both contestation and participation. Specifically, democracies feature political leaders chosen through free and fair elections and satisfy a threshold value of suffrage.

4.9.1 bmr_dem Dichotomous democracy measure

Dichotomous democracy measure.

(Bernhard et al., 2001)

(Data downloaded: 2016-09-19)

Event History Coding of Democratic Breakdowns Binary coding of all democracies from 1913 until 2005 prepared for use in event history analysis.

4.10.1 bnr_dem Democratic Breakdown

The variable is a binary coding of all democracies from 1913 until 2005 (included in the QoG dataset are only the years 1946-2005) prepared for use in event history analysis. Countries that meet the minimum conditions for democracy (see below) enter the dataset and are coded "0." When countries cease to meet those minimum criteria they are coded "1" and exit from the dataset. If, after a democratic breakdown, a country again meets our minimum criteria it re-enters the data as a new democratic episode. The time frame onset in 1913 is a function of when the first country (Norway) meets the minimum conditions. All series terminate in either in a breakdown in various years or right censorship in 2005. The minimal conditions are based on Dahl's notion of polyarchy (competitiveness, inclusiveness) combined with Linz and Stepan's stateness criteria.

Competitiveness: Like Przeworski et al. we include countries that hold elections for both the executive and legislature, and in which more than one party contests the elections. However, we exclude cases in which we detected outcome changing vote fraud, in which there was either extensive or extreme violence that inhibited voters' preference expression, or in which political parties representing a substantial portion of the population were banned.

Inclusiveness: We only include competitive polities in which at least fifty percent of all adult citizens are enfranchised to vote in our set of democracies.

Stateness: We also considered questions of sovereignty, not including colonial states, where founding elections were held prior to the granting of independence, and countries experiencing internal wars in which twenty percent or greater of the population or territory was out of control of the state.

4.11 Bertelsmann Stiftung

<http://www.social-inclusion-monitor.eu/downloads/>

(Schraad-Tischler, 2015)

(Data downloaded: 2016-09-19)

Social Justice Index The Social Justice Index is designed to measure on a regular basis the progress made and the ground lost on issues of social justice in each EU member state. Since social justice is a central constitutive element of the legitimacy and stability of any political community, we look at the current state of affairs within the individual member states. As a cross-national survey, the Social Justice Index comprises 27 quantitative and eight qualitative indicators, each associated with one of the six dimensions of social justice:

1. Poverty prevention

2. Equitable education
3. Labor market access
4. Social cohesion and non-discrimination
5. Health
6. Intergenerational justice

The dimension of poverty is weighted most strongly, given triple weight in the overall ranking. The importance of access to education and labor market is emphasized by doubly weighting these dimensions. Social cohesion, health and intergenerational justice are factored into the index with a simple/normal weight. For the purposes of comparison, in addition to the weighted Social Justice Index, a non-weighted ranking was created in which the six dimensions were treated equally. The Social Justice Index is based on quantitative and qualitative data collected by the Bertelsmann Stiftung within the framework of its SGI project (www.sgi-network.org). The data for the quantitative SGI indicators used in the Social Justice Index are derived primarily from Eurostat and the European Union Statistics on Income and Living Conditions (EU-SILC). The qualitative indicators reflect the evaluations provided by more than 100 experts responding to the SGI's survey of the state of affairs in various policy areas throughout the OECD and EU. For these indicators, the rating scale ranges from 1 (worst) to 10 (best). In order to ensure compatibility between the quantitative and qualitative indicators, all raw values for the quantitative indicators undergo linear transformation to give them a range of 1 to 10 as well. Together with the ranking of the resulting reform values, the index values form the Social Inclusion Monitor dataset.

The six dimensions in detail:

1. Poverty Prevention: Under conditions of poverty, social participation and self-determined life are possible only with great difficulty. Poverty is the strongest determinant of social and economic exclusion of young people.
2. Equitable Education: Equal access to good-quality education is an essential factor in providing equitable capabilities and opportunities for advancement (vertical mobility). It is critical to ending hereditary social exclusion, supports integration and includes lifelong learning.
3. Labor-market access: Employment both provides an income and facilitates social participation. The degree of inclusiveness is essential since an individual's status is defined in large part by his or her participation in the workforce. Exclusion from the labor market substantially limits individual opportunities for self-realization, contributes to an increase in the risk of poverty, and can even lead to serious health stresses.
4. Health: The conditions in which people live and die are shaped by political, social and economic forces. Social and economic policies have a determining impact on whether a child can grow and develop to its full potential and live a flourishing life, or whether its life will be blighted. This is why access to healthcare ensures young people can be active in society.
5. Social cohesion and non-discrimination: This dimension enables the examination of the extent to which trends towards social polarization, exclusion and the discrimination of specific groups are successfully countered. Developing a community of shared values, shared challenges and equal opportunity is the aim.
6. Intergenerational justice: The issue at stake here is the need for contemporary generations to lead lives they value without compromising the ability of future generations at the same. Sharing social burdens among young and old, with provision for future generations is the aspiration.

4.12 Bertelsmann Stiftung

<http://www.bti-project.org/index/>
(Bertelsmann Stiftung, 2016)
(Data downloaded: 2016-09-20)

Bertelsmann Transformation Index The Bertelsmann Stiftung's Transformation Index (BTI) analyzes and evaluates the quality of democracy, a market economy and political management in 129 developing and transition countries. It measures successes and setbacks on the path toward a democracy based on the rule of law and a socially responsible market economy.

In-depth country reports provide the basis for assessing the state of transformation and persistent challenges, and to evaluate the ability of policymakers to carry out consistent and targeted reforms. The BTI is the first cross-national comparative index that uses self-collected data to comprehensively measure the quality of governance during processes of transition.

4.12.1 bti_aar Associational/Assembly Rights

To what extent can individuals form and join independent political or civic groups? To what extent can these groups operate and assemble freely? 1-10.

1. Association and assembly rights are denied. Independent civic groups do not exist or are prohibited.
4. Association and assembly rights are severely limited. Oppositional political groups with any relevance are prohibited or systematically disabled. Independent civic groups can operate and assemble if they support the regime or are not outspokenly critical of it.
7. Association and assembly rights are partially limited, but generally there are no outright prohibitions of independent political or civic groups.
10. Association and assembly rights are unrestricted for individuals and independent political or civic groups within the basic democratic order.

N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.2 bti_acp Anti-Corruption Policy

To what extent does the government successfully contain corruption? 1-10.

1. The government fails to contain corruption, and there are no integrity mechanisms in place.
4. The government is only partly willing and able to contain corruption, while the few integrity mechanisms implemented are mostly ineffective.
7. The government is often successful in containing corruption. Most integrity mechanisms are in place, but some are functioning only with limited effectiveness.
10. The government is successful in containing corruption, and all integrity mechanisms are in place and effective.

4.12.3 bti_aod Approval of Democracy

How strong is the citizens' approval of democratic norms and procedures? 1-10.

1. Approval of democratic norms and procedures is very low.
4. Approval of democratic norms and procedures is fairly low.
7. Approval of democratic norms and procedures is fairly high.
10. Approval of democratic norms and procedures is very high.

Min. Year:2011 Max. Year: 2015
N: 74

Min. Year:2005 Max. Year: 2015
N: 80 n: 396 \bar{N} : 36 \bar{T} : 5

4.12.4 bti_ba Basic Administration

To what extent do basic administrative structures exist? 1-10.

1. The administrative structures of the state are limited to keeping the peace and maintaining law and order. Their territorial scope is very limited, and broad segments of the population are not covered.
4. The administrative structures of the state are extending beyond maintaining law and order, but their territorial scope and effectivity are limited.
7. The administrative structures of the state provide most basic public services throughout the country, but their operation is to some extent deficient.
10. The state has a differentiated administrative structure throughout the country which provides all basic public services.

N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.5 bti_cdi Commitment to Democratic Institutions

To what extent are democratic institutions accepted as legitimate by the relevant actors? 1-10.

1. There are no democratic institutions as such (authoritarian regime).
4. Only individual institutions are accepted, while influential actors hold vetoes. Acceptance remains unstable over time.
7. Most democratic institutions are accepted as legitimate by most relevant actors.
10. All democratic institutions are accepted as legitimate by all relevant actors.

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.6 bti_ci Conflict Intensity

How serious are social, ethnic and religious conflicts? 1-10.

1. There are no violent incidents based on social, ethnic or religious differences.
4. There are only few violent incidents. Radical political actors have limited success in mobilizing along existing cleavages. Society and the political elite, however, are divided along social, ethnic or religious lines.
7. There are violent incidents. Mobilized groups and protest movements dominate politics. Society and the political elite are deeply split into social classes, ethnic or religious communities.
10. There is civil war or a widespread violent conflict based on social, ethnic or religious differences.

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.7 bti_cps Currency and Price Stability

There are institutional or political precautions to control inflation sustainably, together with an appropriate monetary policy and fiscal policy. Including "To what extent do government and central bank pursue a consistent inflation policy and an appropriate foreign exchange policy?" and "To what extent do the government's fiscal and debt policies support macroeconomic stability?"

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.8 bti_cr Civil Rights

To what extent are civil rights guaranteed and protected, and to what extent can citizens seek redress for violations of these rights? 1-10.

1. Civil rights are not guaranteed and frequently violated. There are no mechanisms and institutions to protect citizens against violations of their rights.
4. Civil rights are guaranteed only within limited enclaves or are violated over protracted periods of time. Some mechanisms and institutions to prosecute, punish and redress violations of civil rights are established formally, but do not function.
7. Civil rights are guaranteed, but are partially or temporarily violated or are not protected in some parts of the country. Mechanisms and institutions to prosecute, punish and redress violations of civil rights are in place, but often prove to be ineffective.
10. Civil rights are guaranteed by the constitution and respected by all state institutions. Infringements present an extreme exception. Citizens are effectively protected by mechanisms and institutions established to prosecute, punish and redress violations of their rights.

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.9 bti_csp Civil Society Participation

To what extent does the political leadership enable the participation of civil society in the political process? 1-10.

1. The political leadership obstructs civil society participation. It suppresses civil society organizations and excludes its representatives from the policy process.
4. The political leadership neglects civil society participation. It frequently ignores civil society actors and formulates its policy autonomously.
7. The political leadership permits civil society participation. It takes into account and accommodates the interests of most civil society actors.
10. The political leadership actively enables civil society participation. It assigns an important role to civil society actors in deliberating and determining policies.

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 752 \bar{N} : 68 \bar{T} : 6

4.12.10 bti_cst Civil Society Traditions

To what extent are there traditions of civil society? 1-10.

1. Traditions of civil society are very strong.
4. Traditions of civil society are fairly strong.
7. Traditions of civil society are fairly weak.
10. Traditions of civil society are very weak.

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.11 bti_ds Democracy Status

N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.12 bti_eo Equal Opportunity

To what extent does equality of opportunity exist? 1-10.

1. Equality of opportunity is denied. Women and/or members of ethnic or religious groups have only very limited access to education, public office and employment. There are no legal provisions against discrimination.
4. Equality of opportunity is not achieved. Women and/or members of ethnic or religious groups have limited access to education, public office and employment. There are some legal provisions against discrimination, but their implementation is highly deficient.
7. Equality of opportunity is largely achieved. Women and members of ethnic or religious groups have near-equal access to education, public office and employment. There are a number of legal provisions against discrimination, but their implementation is at times insufficient.
10. Equality of opportunity is achieved. Women and members of ethnic or religious groups have equal access to education, public office and employment. There is a comprehensive and effective legal and institutional framework for the protection against discrimination.

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.13 bti_eos Economic Output Strength

How does the economy, as measured in quantitative indicators, perform? 1-10.

1. The economic performance is very poor. Strongly negative macroeconomic data may include negative GDP growth rates, very high unemployment levels, high inflation, large budget deficits, unreasonably high debt and an increasingly unsustainable current account position.
4. The economic performance is poor. Continuing negative macroeconomic data may include stagnant GDP levels, relatively high unemployment levels, low price stability, an unbalanced budget, rising debt and a volatile current account position.
7. The economic performance is good. Moderately positive macroeconomic data may include low GDP growth rates, only moderate unemployment levels, relative price stability, a slightly unbalanced budget, a tendency toward debt and a manageable current account position.
10. The economic performance is very good. Positive macroeconomic data may include relatively high GDP growth rates, relatively high employment levels, price stability, balanced budget, reasonable debt and a sustainable current account position.

4.12.15 bti_epg Effective Power to Govern

To what extent do democratically elected political representatives have the effective power to govern, or to what extent are there veto powers and political enclaves? 1-10.

1. Political decision-makers are not democratically elected.
4. Democratically elected political representatives have limited power to govern. Strong veto groups are able to undermine fundamental elements of democratic procedures.
7. Democratically elected political representatives have considerable power to govern. However, individual power groups can set their own domains apart or enforce special-interest policies.
10. Democratically elected political representatives have the effective power to govern. No individual or group is holding any de facto veto power.

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.16 bti_ffe Free and Fair Elections

To what extent are political representatives determined by general, free and fair elections? 1-10.

1. There are no elections at the national level.
4. General elections are held, but serious irregularities during voting process and ballot count occur. The rights to vote, campaign and run for office are restricted, and elections have de facto only limited influence over who governs.
7. General, multi-party elections are held, conducted properly and accepted as the means of filling political posts. However, there are some constraints on the fairness of the elections with regard to registration, campaigning or media access.
10. There are no constraints on free and fair elections.

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.17 bti_foe Freedom of Expression

To what extent can citizens, organizations and the mass media express opinions freely? 1-10.

1. Freedom of expression is denied. Independent media do not exist or are prohibited.
4. Freedom of expression is severely limited. Public debate is vulnerable to distortion and manipulation through strong intervention.
7. Freedom of expression is partially limited, but generally there are no outright prohibitions on the press.
10. Freedom of expression is unrestricted for citizens, groups and the press within the basic democratic order.

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.18 bti_ic International Cooperation

The political leadership is willing and able to cooperate with external supporters and organizations. Including "To what extent does the political leadership use the support of international partners to implement a long-term strategy of development?", "To what extent does the government act as a credible and reliable partner in its relations with the international community?" and "To what extent is the political leadership willing and able to cooperate with neighboring countries?".

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 752 \bar{N} : 68 \bar{T} : 6

4.12.19 bti_ig Interest Groups

To what extent is there a network of cooperative associations or interest groups to mediate between society and the political system? 1-10.

1. Interest groups are present only in isolated social segments, are on the whole poorly balanced and cooperate little. A large number of social interests remain unrepresented.
4. There is a narrow range of interest groups, in which important social interests are underrepresented. Only a few players dominate, and there is a risk of polarization.
7. There is an average range of interest groups, which reflect most social interests. However, a few strong interests dominate, producing a latent risk of pooling conflicts.

10. There is a broad range of interest groups that reflect competing social interests, tend to balance one another and are cooperative.

Min. Year:2013 Max. Year: 2013
N: 128

Min. Year:2005 Max. Year: 2015
N: 130 n: 753 \bar{N} : 68 \bar{T} : 6

4.12.20 bti_ij Independent Judiciary

To what extent does an independent judiciary exist? 1-10.

- 1. The judiciary is not independent and not institutionally differentiated.
- 4. The independence of the judiciary is heavily impaired by political authorities and high levels of corruption. It is to some extent institutionally differentiated, but severely restricted by functional deficits, insufficient territorial operability and scarce resources.
- 7. The judiciary is largely independent, even though occasionally its decisions are subordinated to political authorities or influenced by corruption. It is institutionally differentiated, but partially restricted by insufficient territorial or functional operability.
- 10. The judiciary is independent and free both from unconstitutional intervention by other institutions and from corruption. It is institutionally differentiated, and there are mechanisms for judicial review of legislative or executive acts.

4.12.26 bti_muf Monopoly on the use of Force

To what extent does the state's monopoly on the use of force cover the entire territory of the country?
1-10.

1. There is no state monopoly on the use of force.
4. The state's monopoly on the use of force is established only in key parts of the country. Large areas of the country are controlled by guerrillas, paramilitaries or clans.
7. The state's monopoly on the use of force is established nationwide in principle, but it is challenged by guerrillas, mafias or clans in territorial enclaves.

10. There is no competition with the state's monopoly on the use of force throughout the entire territory.

4.12.27 bti_nird No Interference of Religious Dogmas

To what extent are legal order and political institutions defined without interference by religious dogmas? 1-10.

1. The state is theocratic. Religious dogmas define legal order and political institutions.
4. Secular and religious norms are in conflict about the basic constitution of the state or are forming a hybrid system.
7. The state is largely secular. However, religious dogmas have considerable influence on legal order and political institutions.
10. The state is secular. Religious dogmas have no noteworthy influence on legal order or political institutions.

4.12.29 bti_poa Prosecution of Office Abuse

To what extent are public officeholders who abuse their positions prosecuted or penalized? 1-10.

1. Office holders who break the law and engage in corruption can do so without fear of legal consequences or adverse publicity.
4. Office holders who break the law and engage in corruption are not prosecuted adequately under the law, but occasionally attract adverse publicity.
7. Officeholders who break the law and engage in corruption generally are prosecuted under established laws and often attract adverse publicity, but occasionally slip through political, legal or procedural loopholes.
10. Officeholders who break the law and engage in corruption are prosecuted rigorously under established laws and always attract adverse publicity.

4.12.39 bti_si State Identity

To what extent do all relevant groups in society agree about citizenship and accept the nation-state as legitimate? 1-10.

1. The legitimacy of the nation-state is questioned fundamentally. Different population groups compete for hegemony and deny citizenship to others.
4. The legitimacy of the nation-state is frequently challenged. Significant aspects of citizenship are withheld from entire population groups.
7. The legitimacy of the nation-state is rarely questioned. Some groups are denied full citizenship rights.
10. The large majority of the population accepts the nation-state as legitimate. All individuals and groups enjoy the right to acquire citizenship without discrimination.

4.12.41 bti_ssn Social Safety Nets

To what extent do social safety nets provide compensation for social risks? 1-10.

1. Social safety nets do not exist. Poverty is combated hardly at all, or only ad hoc.
4. Social safety nets are rudimentary and cover only few risks for a limited number of beneficiaries. The majority of the population is at risk of poverty.
7. Social safety nets are well developed, but do not cover all risks for all strata of the population. A significant part of the population is still at risk of poverty.
10. Social safety nets are comprehensive and compensate for social risks, especially nationwide health care and a well-focused prevention of poverty.

4.13 Coppedge, Alvarez & Maldonado

<http://www3.nd.edu/~mcoppedg/crd/datacrd.htm>

(Coppedge et al., 2008)

(Data downloaded: 2016-09-20)

Contestation and Inclusiveness, 1950-2000 These are the two principal components of 13-15 indicators of democracy, including those compiled by Freedom House; Polity; Arthur Banks; Alvarez, Cheibub, Limongi, and Przeworski, as updated by Cheibub and Gandhi; Bollen; and Cingranelli and Richards. The dataset covers most countries in the world from 1950 through 2000. In an article in the *Journal of Politics* (July 2008), Angel Alvarez, Claudia Maldonado, and I argue that these principal components, which capture 75 percent of variation in the most commonly used democracy indicators, measure Robert Dahl's two dimensions of polyarchy: contestation and inclusiveness.

4.14 The Comparative Constitutions Project

<http://comparativeconstitutionsproject.org/>

(Elkins et al., 2014)

(Data downloaded: 2016-09-20)

Characteristics of National Constitutions This dataset presents records of the characteristics of national constitutions written since 1789. Each constitutional text is coded twice by different coders working independently. To maximize the reliability of the final data, the discrepancies between these two codings are reconciled by a third individual - a reconciler. This is the second public release of data (version 2.0) on the content of constitutions. Authors rely on Ward and Gleditsch's list to identify which countries are independent in a given year. There are utilized two concepts to categorize constitutional texts. A constitutional system encompasses the period in which a constitution is in force before it is replaced or suspended. A constitutional event is any change to a country's constitution, including adoption, amendment, suspension, or reinstatement. For years in which there are multiple events, the constitution is coded as it stood in force at the end of the year. For example, if a constitution was amended the same year as it was adopted, the content of the constitution is coded as amended rather than as originally adopted. In addition, since events are (often) in force for multiple years, authors interpolated the data associated each event across all country-years in which that event was in force. Note that this is an extremely conservative interpolation strategy because most constitutional amendments do not change many provisions. As a result, for most variables, one can safely interpolate across constitutional systems.

4.14.1 ccp_buildsoc Duty of the People is to Build Country in Constitution

Does the constitution refer to a duty of the people to take part in building society or to work for the development of the country?

1. Yes
2. No
96. Other

4.15 Cheibub, Antonio, Gandhi & Vreeland

<https://sites.google.com/site/joseantoniocheibub/datasets/democracy-and-dictatorship-revisited>

(Cheibub et al., 2010)

(Data downloaded: 2016-09-20)

Classification of Political Regimes Classification of political regimes as democracy and dictatorship. Classification of democracies as parliamentary, semi-presidential (mixed) and presidential. Classification of dictatorships as military, civilian and royal.

4.15.1 chga_demo Democracy

A regime is considered a democracy if the executive and the legislature is directly or indirectly elected by popular vote, multiple parties are allowed, there is de facto existence of multiple parties outside of regime front, there are multiple parties within the legislature, and there has been no consolidation of incumbent advantage (e.g. unconstitutional closing of the lower house or extension of incumbent's term by postponing of subsequent elections). Transition years are coded as the regime that emerges in that year.

4.16 Cingranelli & Richards

<http://www.humanrightsdata.com/>
(Cingranelli et al., 2014)
(Data downloaded: 2016-09-19)

The Cingranelli-Richards (CIRI) Human Rights Dataset The CIRI Human Rights Dataset (version 2014.04.14) contains standards-based quantitative information on government respect for 15 internationally recognized human rights for 202 countries, annually from 1981-2011. It is designed for use by scholars and students who seek to test theories about the causes and consequences of human rights violations, as well as policy makers and analysts who seek to estimate the human rights effects of a wide variety of institutional changes and public policies including democratization, economic aid, military aid, structural adjustment, and humanitarian intervention.

Note: The three different missing codes -66 (country is occupied by foreign powers), -77 (complete collapse of central authority), -999 (missing) have all been coded as missing.

4.16.1 ciri_assn Freedom of Assembly and Association

It is an internationally recognized right of citizens to assemble freely and to associate with other persons in political parties, trade unions, cultural organizations, or other special-interest groups. This variable indicates the extent to which the freedoms of assembly and association are subject to actual governmental limitations or restrictions (as opposed to strictly legal protections).

0. Citizens' rights to freedom of assembly or association were severely restricted or denied completely to all citizens
1. These rights were limited for all citizens or severely restricted or denied for select groups
2. These rights were virtually unrestricted and freely enjoyed by practically all citizens

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4916 \bar{N} : 159 \bar{T} : 25

4.16.2 ciri_disap Disappearance

Disappearances are cases in which people have disappeared, political motivation appears likely, and the victims have not been found. Knowledge of the whereabouts of the disappeared is, by definition, not public knowledge. However, while there is typically no way of knowing where victims are, it is typically known by whom they were taken and under what circumstances.

- 0. Disappearances have occurred frequently
- 1. Disappearances occasionally occurred
- 2. Disappearances did not occur

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4907 \bar{N} : 158 \bar{T} : 25

4.16.3 ciri_dommov Freedom of Domestic Movement

This variable indicates citizens' freedom to travel within their own country.

- 0. Freedom was severely restricted
- 1. Freedom was somewhat restricted
- 2. Freedom of foreign movement

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 5496 \bar{N} : 177 \bar{T} : 28

4.16.4 ciri_elecsd Electoral Self-Determination

This variable indicates to what extent citizens enjoy freedom of political choice and the legal right and ability in practice to change the laws and officials that govern them through free and fair elections. This right is sometimes known as the right to selfdetermination.

- 0. The right to self-determination through free and fair elections did not exist in law or practice
- 1. While citizens had the legal right to self-determination, there were some limitations to the fulfillment of this right in practice. Therefore, in states receiving a 1, political participation was only moderately free and open.
- 2. Political participation was very free and open and citizens had the right to self-determination through free and fair elections in both law and practice

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4921 \bar{N} : 159 \bar{T} : 25

4.16.5 `ciri_empinx_new` Empowerment Rights Index (New)

This is an additive index constructed from the Foreign Movement, Domestic Movement, Freedom of Speech, Freedom of Assembly and Association, Workers' Rights, Electoral Self-Determination, and Freedom of Religion indicators. It ranges from 0 (no government respect for these seven rights) to 14 (full government respect for these seven rights).

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4907 \bar{N} : 158 \bar{T} : 25

4.16.6 `ciri_empinx_old` Empowerment Rights Index (Old)

This is an additive index constructed from the Freedom of Movement, Freedom of Speech, Workers' Rights, Political Participation, and Freedom of Religion indicators. It ranges from 0 (no government respect for these five rights) to 10 (full government respect for these five rights).

Note: Starting with the 2007 coding, this variable was retired in favor of the newer index `ciri_empinx_new`.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2006
N: 199 n: 3953 \bar{N} : 152 \bar{T} : 20

4.16.7 `ciri_formov` Freedom of Foreign Movement

This variable indicates citizens' freedom to leave and return to their country.

- 0. This freedom was severely restricted
- 1. The freedom was somewhat restricted
- 2. Unrestricted freedom of foreign movement

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 5498 \bar{N} : 177 \bar{T} : 28

4.16.8 **ciri_injud** Independence of the Judiciary

This variable indicates the extent to which the judiciary is independent of control from other sources, such as another branch of the government or the military.

- 0. Not independent
- 1. Partially independent
- 2. Generally independent

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 5481 \bar{N} : 177 \bar{T} : 28

4.16.9 **ciri_kill** Extrajudicial Killing

Extrajudicial killings are killings by government officials without due process of law. They include murders by private groups if instigated by government. These killings may result from the deliberate, illegal, and excessive use of lethal force by the police, security forces, or other agents of the state whether against criminal suspects, detainees, prisoners, or others.

- 0. Extrajudicial killings were practiced frequently
- 1. Extrajudicial killings were practiced occasionally
- 2. Such killings did not occur

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4905 \bar{N} : 158 \bar{T} : 25

4.16.10 **ciri_move_old** Freedom of Movement (Old)

This variable indicates citizens' freedom to travel within their own country and to leave and return to that country.

- 0. Domestic and foreign travel was restricted
- 1. Such travel was generally unrestricted.

Note: Starting with the 2007 coding, this variable was retired and became two separate variables, **ciri_dommov** Freedom of Domestic Movement and **ciri_formov** Freedom of International Movement.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2010
N: 199 n: 3970 \bar{N} : 132 \bar{T} : 20

4.16.11 ciri_physint Physical Integrity Rights Index

This is an additive index constructed from the Torture, Extrajudicial Killing, Political Imprisonment, and Disappearance indicators. It ranges from 0 (no government respect for these four rights) to 8 (full government respect for these four rights).

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4889 \bar{N} : 158 \bar{T} : 25

4.16.12 ciri_polpris Political Imprisonment

Political imprisonment refers to the incarceration of people by government officials because of: their speech; their non-violent opposition to government policies or leaders; their religious beliefs; their non-violent religious practices including proselytizing; or their membership in a group, including an ethnic or racial group.

- 0. There were many people imprisoned because of their religious, political, or other beliefs
- 1. A few people were imprisoned
- 2. No persons were imprisoned for any of the above reasons

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4912 \bar{N} : 158 \bar{T} : 25

4.16.13 ciri_relfre_new Freedom of Religion (New)

This variable indicates the extent to which the freedom of citizens to exercise and practice their religious beliefs is subject to actual government restrictions. Citizens should be able to freely practice their religion and proselytize (attempt to convert) other citizens to their religion as long as such attempts are done in a non-coercive, peaceful manner.

- 0. The government restrictions on religious practices are severe and widespread
- 1. Such practices are moderate
- 2. Such practices are practically absent

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 5485 \bar{N} : 177 \bar{T} : 28

4.16.14 ciri_relfre_old Freedom of Religion (Old)

This variable indicates the extent to which the freedom of citizens to exercise and practice their religious beliefs is subject to actual government restrictions. Citizens should be able to freely practice

their religion and proselytize (attempt to convert) other citizens to their religion as long as such attempts are done in a non-coercive, peaceful manner.

- 0. The government restricted some religious practices,
- 1. The government placed no restrictions on religious practices.

Note: Starting with the 2007 coding, this variable was retired.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2006
N: 199 n: 3960 \bar{N} : 152 \bar{T} : 20

4.16.15 ciri_speech Freedom of Speech

This variable indicates the extent to which freedoms of speech and press are affected by government censorship, including ownership of media outlets. Censorship is any form of restriction that is placed on freedom of the press, speech or expression. Expression may be in the form of art or music.

- 0. Government censorship of the media was complete
- 1. There was some government censorship of the media
- 2. There was no government censorship of the media

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4921 \bar{N} : 159 \bar{T} : 25

4.16.16 ciri_tort Torture

Torture refers to the purposeful inflicting of extreme pain, whether mental or physical, by government officials or by private individuals at the instigation of government officials. Torture includes the use of physical and other force by police and prison guards that is cruel, inhuman, or degrading. This also includes deaths in custody due to negligence by government officials.

- 0. Torture was practiced frequently
- 1. Torture was practiced occasionally
- 2. Torture did not occur

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4911 \bar{N} : 158 \bar{T} : 25

4.16.17 ciri_wecon Women's Economic Rights

Women's economic rights include a number of internationally recognized rights. These rights include: Equal pay for equal work, Free choice of profession or employment without the need to obtain a

husband or male relative's consent, The right to gainful employment without the need to obtain a husband or male relative's consent, Equality in hiring and promotion practices, Job security (maternity leave, unemployment benefits, no arbitrary firing or layoffs, etc...), Non-discrimination by employers, The right to be free from sexual harassment in the workplace, The right to work at night, The right to work in occupations classified as dangerous, The right to work in the military and the police force.

- 0. There were no economic rights for women in law and that systematic discrimination based on sex may have been built into law
- 1. Women had some economic rights under law, but these rights were not effectively enforced
- 2. Women had some economic rights under law, and the government effectively enforced these rights in practice while still allowing a low level of discrimination against women in economic matters
- 3. All or nearly all of women's economic rights were guaranteed by law and the government fully and vigorously enforces these laws in practice

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4853 \bar{N} : 157 \bar{T} : 24

4.16.18 ciri_wopol Women's Political Rights

Women's political rights include a number of internationally recognized rights. These rights include: The right to vote, The right to run for political office, The right to hold elected and appointed government positions, The right to join political parties, The right to petition government officials.

- 0. Women's political rights were not guaranteed by law
- 1. Women's political rights were guaranteed in law, but severely prohibited in practice
- 2. Women's political rights were guaranteed in law, but were still moderately prohibited in practice
- 3. Women's political rights were guaranteed in both law and practice

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4904 \bar{N} : 158 \bar{T} : 25

4.16.19 ciri_worker Workers Rights

Workers should have freedom of association at their workplaces and the right to bargain collectively with their employers. This variable indicates the extent to which workers enjoy these and other internationally recognized rights at work, including a prohibition on the use of any form of forced or compulsory labor; a minimum age for the employment of children; and acceptable conditions of work with respect to minimum wages, hours of work, and occupational safety and health.

- 0. Workers' rights were severely restricted
- 1. Workers' rights were somewhat restricted
- 2. Workers' rights were fully protected

Min. Year:2011 Max. Year: 2011
N: 191

Min. Year:1981 Max. Year: 2011
N: 199 n: 4920 \bar{N} : 159 \bar{T} : 25

4.16.20 ciri_wosoc Women's Social Rights

Women's social rights include a number of internationally recognized rights. These rights include: The right to equal inheritance, The right to enter into marriage on a basis of equality with men, The right to travel abroad, The right to obtain a passport, The right to confer citizenship to children or a husband, The right to initiate a divorce, The right to own, acquire, manage, and retain property brought into marriage, The right to participate in social, cultural, and community activities, The right to an education, The freedom to choose a residence/domicile, Freedom from female genital mutilation of children and of adults without their consent, Freedom from forced sterilization.

0 There were no social rights for women in law and that systematic discrimination based on sex may have been built into law

1. Women had some social rights under law, but these rights were not effectively enforced
2. Women had some social rights under law, and the government effectively enforced these rights in practice while still allowing a low level of discrimination against women in social matters
3. All or nearly all of women's social rights were guaranteed by law and the government fully and vigorously enforced these laws in practice.

(Armingeon et al., 2016)
(Data downloaded: 2016-09-20)

Comparative Political Data Set The Comparative Political Data Set 1960-2014 (CPDS) is a collection of political and institutional data which have been assembled in the context of the research projects "Die Handlungsspielräume des Nationalstaates" and "Critical junctures. An international comparison" directed by Klaus Armingeon and funded by the Swiss National Science Foundation. This data set consists of (mostly) annual data for 36 democratic OECD and/or EU-member countries for the period of 1960 to 2013. In all countries, political data were collected only for the democratic periods. The data set is suited for cross-national, longitudinal and pooled time-series analyses.

4.17.1 cpds_chg Number of changes in government per year

Number of changes in government per year [termination of government due to (a) elections, (b) voluntary resignation of the Prime Minister, (c) resignation of Prime Minister due to health reasons, (d) dissension within government (break up of the coalition), (e) lack of parliamentary support, (f) intervention by the head of state, or (g) broadening of the coalition (inclusion of new parties)].

4.18 Comparative Study of Electoral Systems (CSES)

<http://www.cses.org/>

(The Comparative Study of Electoral Systems, 2015)

(Data downloaded: 2015-10-30)

CSES dataset CSES is a collaborative program of research among election study teams from around the world. Participating countries include a common module of survey questions in their post-election studies. The resulting data are deposited along with voting, demographic, district and macro variables. The studies are then merged into a single, free, public dataset for use in comparative study and cross-level analysis. The research agenda, questionnaires, and study design are developed by an international committee of leading scholars of electoral politics and political science. The design is implemented in each country by their foremost social scientists.

Note: Portugal 2002 from the initial data Module 1 was excluded, as this module provide data until 2001, therefore these observations are coded incorrectly.

4.18.1 cses_pc Close to Political Party

Do you usually think of yourself as close to any particular party? Share of the population who answered Yes.

Note: Refused to answer, Don't know and similar answers were coded as missing, and the average are based on the remaining answers.

4.19 Center for Systemic Peace

<http://www.systemicpeace.org/inscrdata.html>

(Marshall & Cole, 2014)

(Data downloaded: 2016-09-20)

State Fragility Index and Matrix The original data provides the State Fragility Indices and the eight component indicators.

4.19.1 cspf_effect Effectiveness

Effectiveness. Sum of scores in four performance dimensions: Security, Political, Economic, and Social. Security Effectiveness + Political Effectiveness + Economic Effectiveness + Social Effectiveness (13 points possible).

Min. Year:2013 Max. Year: 2013
N: 166

Min. Year:1995 Max. Year: 2014
N: 168 n: 3285 \bar{N} : 164 \bar{T} : 20

4.19.2 cspf_legit Legitimacy

Legitimacy. Sum of scores in four performance dimensions: Security, Political, Economic, and Social. Security Legitimacy + Political Legitimacy + Economic Legitimacy + Social Legitimacy (12 points possible).

Min. Year:2013 Max. Year: 2013
N: 166

Min. Year:1995 Max. Year: 2014
N: 168 n: 3285 \bar{N} : 164 \bar{T} : 20

4.19.3 cspf_sfi State fragility index

State fragility index. A country's fragility is closely associated with its state capacity to manage conflict; make and implement public policy; and deliver essential services and its systemic resilience in maintaining system coherence, cohesion, and quality of life; responding effectively to challenges and crises, and sustaining progressive development. = Effectiveness Score + Legitimacy Score (25 points possible).

Min. Year:2013 Max. Year: 2013
N: 166

Min. Year:1995 Max. Year: 2014
N: 168 n: 3285 \bar{N} : 164 \bar{T} : 20

4.20 Center for Systemic Peace

<http://www.systemicpeace.org/inscrdata.html>
(Marshall et al., 1999)
(Data downloaded: 2016-09-21)

Memberships in Conventional Intergovernmental Organizations Dataset Country data denotes individual country membership in federations of intergovernment organizations, universal membership organizations, inter-continental membership organizations and regionally-defined membership organizations. Data is coded every fifth year.

4.20.1 csपो_ce Memberships in Council of Europe

Memberships in Council of Europe.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1952 Max. Year: 1997
N: 172 n: 1276 \bar{N} : 28 \bar{T} : 7

4.20.2 csपो_cioa Total Amount of Memberships for Type A Intergovernmental Organization

Indicates the total amount of memberships in the only Group A conventional intergovernmental organization. (Type A): Includes all international organizations, which group together at least three other autonomous non-regional international bodies as full members. "Umbrella" organizations of this kind which have national organizations as an additional membership category are also included.

The United Nations is included (and is the only listed IGO) in this type because of its focal role in relation to its Specialized Agencies that 'members' of the UN system.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1952 Max. Year: 1997
N: 172 n: 1276 \bar{N} : 28 \bar{T} : 7

4.20.3 cspo_ciob Total Amount of Memberships for Type B Intergovernmental Organization

Indicates the total amount of memberships for all Type B conventional intergovernmental organizations. (Type B): Includes all non-profit international organizations, that have a widespread, geographically-balanced membership, management and policy-control. Although this concept of a 'universal' membership organization is much discussed, no generally accepted rule for distinguishing such bodies has been formulated. The rule applied here is that there should be members in at least 60 countries, or else in more than 30 countries provided that the distribution between continents is 'wellbalanced'.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1952 Max. Year: 1997
N: 172 n: 1276 \bar{N} : 28 \bar{T} : 7

4.20.4 cspo_cioc Total Amount of Memberships for Type C Intergovernmental Organization

Indicates the total amount of memberships for all Type C conventional intergovernmental organizations. (Type C): Includes all international non-profit organizations, whose membership and preoccupations exceed that of a particular continental region, although not to a degree justifying its inclusion in the previous type.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1952 Max. Year: 1997
N: 172 n: 1276 \bar{N} : 28 \bar{T} : 7

4.20.5 cspo_ciod Total Amount of Memberships for Type D Intergovernmental Organization

Indicates the total amount of memberships for all Type D conventional intergovernmental organizations. (Type D): Includes all international non-profit organizations, whose membership or preoccupations are restricted to a particular continent or sub continental region.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1952 Max. Year: 1997
N: 172 n: 1276 \bar{N} : 28 \bar{T} : 7

4.20.6 cspo_interpol Memberships in International Criminal Police Organization-Interpol

Memberships in International Criminal Police Organization (Interpol).

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1972 Max. Year: 1997
N: 170 n: 874 \bar{N} : 34 \bar{T} : 5

4.20.7 cspo_nato Memberships in NATO

Memberships in North Atlantic Treaty Organization (NATO).

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1952 Max. Year: 1997
N: 172 n: 1276 \bar{N} : 28 \bar{T} : 7

4.20.8 cspo_oecd Memberships in OECD

Memberships in Organisation for Economic Co-operation and Development (OECD).

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1952 Max. Year: 1997
N: 172 n: 1276 \bar{N} : 28 \bar{T} : 7

4.20.9 cspo_opec Membership in OPEC

Memberships in Organization of the Petroleum Exporting Countries (OPEC).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1962 Max. Year: 1997
N: 172 n: 1109 \bar{N} : 31 \bar{T} : 6

4.20.10 cspo_uiareg Geographical Region

Code designation used by UIA for geographical region classification:

- 1 Africa
- 2 Americas
- 3 Asia
- 4 Pacific

4.22 Williams Andrew (2014)

<https://andrewwilliamsecon.wordpress.com/datasets/>
(Williams, 2014)
(Data downloaded: 2016-09-21)

Dataset for Information and Accountability Transparency The article "A global index of information transparency and accountability" (Williams, 2014) uses a relatively new methodology, similar to Transparency International's Corruption Perceptions Index, to construct composite indicators of what we call Informational Transparency, and Accountability. These new indicators use data from 29 sources, with scores being derived annually between 1980 and 2010 across more than 190 countries.

4.22.1 diat_ati Accountability Transparency

Accountability Transparency. Author has 16 separate indicators for the Accountability Transparency Index (six for the measurement of a free media, four for fiscal transparency, and six for political constraints). 1980 is considered to be the base year. The Accountability Transparency Index has 115 countries in 1980, but rising to up to 189 countries towards the end of the period.

Min. Year:2010 Max. Year: 2010
N: 180

Min. Year:1980 Max. Year: 2010
N: 189 n: 4921 \bar{N} : 159 \bar{T} : 26

4.22.2 diat_iti Information Transparency

Information Transparency. Sub-indicators are constructed to reflect the nuances of this type of transparency. Specifically, three sub-components are constructed: (1) the existence of a free and independent media; (2) fiscal (budgetary) transparency; (3) political constraints. Author has 13 separate indicators for the Information Transparency Index (six for the quantity of information, four for the processes that generate that information, and three for the infrastructure required to

disseminate that information). 1980 is considered to be the base year. The Information Transparency Index (ITI) has scores for initially 153 countries in 1980, increasing over time to 191 by the year 2010.

Min. Year:2010 Max. Year: 2010
N: 187

Min. Year:1980 Max. Year: 2010
N: 189 n: 5329 \bar{N} : 172 \bar{T} : 28

4.22.3 diat_ti Transparency Index

Transparency Index. Combined index of Information Transparency Index and Accountability Transparency Index.

Min. Year:2010 Max. Year: 2010
N: 179

Min. Year:1980 Max. Year: 2010
N: 186 n: 4848 \bar{N} : 156 \bar{T} : 26

4.23 World Bank

<http://go.worldbank.org/2EAGGLRZ40>
(Beck et al., 2001)
(Data downloaded: 2016-09-20)

Database of Political Institutions The Database of Political Institutions (DPI) was compiled by the Development Research Group of the World Bank for research in comparative political economy and comparative political institutions. Please note that the missing codes (-999, -888) has been recoded to missing (.).

4.23.1 dpi_author Government Authority over taxing, spending or legislating

Do the state/provinces have authority over taxing, spending, or legislating? If any of these categories gets a 1. Authority over "cultural affairs", or "planning" in Communist systems, does not qualify.

Min. Year:2012 Max. Year: 2012
N: 65

Min. Year:1975 Max. Year: 2012
N: 76 n: 2150 \bar{N} : 57 \bar{T} : 28

4.23.2 dpi_auton Autonomous Regions

Are there autonomous regions? Autonomous regions are not the same as states, provinces, etc. An autonomous region is recorded if a source explicitly mentions a region, area, or district that is autonomous or self-governing. Furthermore, they must be constitutionally designated as "autonomous" or "independent" or "special". Federal Districts or Capital Districts do not count as autonomous

regions. Disputed autonomy is not recorded. Indian reservations are not counted as autonomous.

Note: This variable is deviating from convention, no information recorded as 0.

Min. Year:2012 Max. Year: 2012
N: 172

Min. Year:1975 Max. Year: 2012
N: 184 n: 6184 \bar{N} : 163 \bar{T} : 34

4.23.3 dpi_cemo Is Chief Executive a Military Officer?

Is Chief Executive a military officer? "1" if the source includes a rank in their title, "0" otherwise. If chief executives were described as officers with no indication of formal retirement when they assumed office, they are always listed as officers for the duration of their term. If chief executives were formally retired military officers upon taking office, then this variable gets a "0".

Min. Year:2012 Max. Year: 2012
N: 175

Min. Year:1975 Max. Year: 2012
N: 185 n: 6203 \bar{N} : 163 \bar{T} : 34

4.23.4 dpi_checks Checks and Balances

Checks and Balances.

Min. Year:2010 Max. Year: 2012
N: 175

Min. Year:1975 Max. Year: 2012
N: 185 n: 6047 \bar{N} : 159 \bar{T} : 33

4.23.5 dpi_cl Closed List

Are closed lists used? (1 if yes, 0 if no) When PR is "1", closed list gets a "1" if voters cannot express preferences for candidates within a party list, 0 if voters can. If PR is "NA" or 0, and Mean District Magnitude =1, Closed list is NA. If PR is "NA" or 0 and Mean District Magnitude is greater than one, the following rules apply: 1) If only one party takes seats, closed list is: "0" (open list), if the number of candidates is greater than the number of seats in an electoral district in a one-party state where other parties may or may not be illegal (LIEC is 4 or 5), "1" (closed list), if the number of candidates equals the number of seats in an electoral district in a one party state where other parties are illegal (LIEC is 3), blank ,if it is unclear whether there is more than one candidate for every seat in an electoral district in a one-party state where other parties are illegal (LIEC is 3.5). 2) If there are multiple parties taking seats, closed list is blank unless the system is explicitly stated as open or closed.

Min. Year:2012 Max. Year: 2012
N: 104

Min. Year:1975 Max. Year: 2012
N: 116 n: 2818 \bar{N} : 74 \bar{T} : 24

4.23.6 dpi_dhondt D'Hondt System

Is the D'Hondt system used? (1 if yes, 0 if no) Is the D'Hondt rule used to allocate seats in a PR system? NA if PR is 0 or NA. If PR is 1, and information is only available from IPU, just record data in 1995.

Min. Year:2012 Max. Year: 2012
N: 98

N: 104 n: 2442 \bar{N} : 64 \bar{T} : 23

4.23.7 dpi_dmmo Is Defense Minister a Military Officer?

Is Defense Minister a Military Officer? Same as in dpi_cemo If no one in the cabinet with such responsibility, or if there are no armed forces, then "NA". If there is no defense minister but the chief executive controls military directly, then same answer as in dpi_cemo.

Min. Year:2012 Max. Year: 2012
N: 165

Min. Year:1975 Max. Year: 2012
N: 177 n: 5489 \bar{N} : 144 \bar{T} : 31

4.23.8 dpi_eage Age of Chief Executive Party

Time since formation under this name. NA if executive is not affiliated with a party. We record party age from the first year that the party was founded under its current name (which can be before a country achieves independence). For parties undergoing a name change or emerging from existing parties, the subsequent party is considered a new party except in the cases where the sources report that the change was superficial. We define a name change as "superficial" if the party leaders, platform, and constituency remained the same. In nearly all cases of a name change, the sources explicitly identify substantive differences in the new party compared to the old, ranging from a change in leadership to change in program. Mergers with other parties are not counted as changes unless name is changed. If several parties come together to form an alliance under a new name, this is counted as a new party.

Min. Year:2010 Max. Year: 2012
N: 149

Min. Year:1975 Max. Year: 2012
N: 171 n: 4763 \bar{N} : 125 \bar{T} : 28

4.23.9 dpi_eipc Executive Electoral Competitiveness

Uses same scale as Legislative IEC. Executives who are: 1) Elected directly by population, or 2) Elected by an electoral college that is elected by the people and has the sole purpose of electing the executive, are scored on the above scale. Executives elected by bodies other than these are given the same score that the electing body would get. Even if the electing body is not the actual "legislature" that is tracked in the LIEC (such as an appointed electoral college), the competitiveness of that body is used to score the executive. This means that competitively elected prime ministers get 6 or 7. The chief executives of Communist nations (the chairman of the Communist Party) is given a 3, because they are elected by the Party Congress, electing bodies which they do not appoint. Executives elected by small, appointed juntas or by appointed electoral colleges get 2. Rival chief executives in one country, particularly in the setting of armed conflicts, are counted as No executives, and thus score a 1. Referenda and votes by "popular acclamation" on unelected executives are scored as 3. If executives unilaterally extend their terms of office, they get a 2 starting in the year they should have held elections. Any executive elected for life, even by the people or an elected assembly, gets a 2. This elected-for-life rule is slightly different from that followed for legislatures that unilaterally extend their rule. If chief executive takes office through a coup and remains office without an election, EIEC is 2 because the executive is unelected. If an elected president is impeached and the vice-president succeeds the presidency in a legal and proper way, EIEC remains as was. If EIEC was 7 under the old president, it remains 7 under the new president. For "Electoral Rules" variables: all get an NA if the LIEC is 1. If LIEC is 2, then legislature is unelected and we infer that district magnitude is NA. If LIEC is less than or equal to 4, then PR is also NA irrespective of district magnitude. If LIEC is less than or equal to 3.5, then both PR and Plurality are NA. In order to assess electoral rules we use the IPU website as well as the Europa Yearbook (and to a lesser extent Banks). IPU has the most recent information whereas Europa has information up to 1984, and from 1990 to 1994. If there are discrepancies between Europa (to 1984) and IPU (1998), we assume that changes have occurred, and only input the IPU information for 1995, leaving blanks from 1985 to 1994. If the IPU matched the Europa exactly, we assumed no changes took place, and filled in the intervening years. In the event that a system changed and then switched back, this introduces errors. Since this assumption was made only when institutions from 1984 matched those in 1998, these cases are limited to very stable democracies.

Min. Year:2010 Max. Year: 2012
N: 175

Min. Year:1975 Max. Year: 2012
N: 185 n: 6200 \bar{N} : 163 \bar{T} : 34

4.23.10 dpi_erc Chief Executive Party Orientation

Party orientation with respect to economic policy, coded based on the description of the party in the sources, using the following criteria: Right: for parties that are defined as conservative, Christian democratic, or right-wing. Left: for parties that are defined as communist, socialist, social democratic, or left-wing. Center: for parties that are defined as centrist or when party position can best be described as centrist (e.g. party advocates strengthening private enterprise in a social-liberal context). Not described as centrist if competing factions "average out" to a centrist position (e.g. a party of "right-wing Muslims and Beijing-oriented Marxists"). 0: for all those cases which do not fit into

the above-mentioned category (i.e. party's platform does not focus on economic issues, or there are competing wings), or no information.

1. Right
2. Center
3. Left

Note: Missing (-999) and No Information (0) have been coded as missing (.).

Min. Year:2010 Max. Year: 2012
N: 99

N: 145 n: 3723 \bar{N} : 98 \bar{T} : 26

4.23.11 dpi_exelec Presidential Election Held

"1" if there was an executive election in this year.

Min. Year:2011 Max. Year: 2012
N: 175

Min. Year:1975 Max. Year: 2012
N: 185 n: 6217 \bar{N} : 164 \bar{T} : 34

4.23.12 dpi_finter Finite Term in Office

Is there a finite term in office? (1 if yes, 0 if no) Is there a constitutional limit on the number of years the executive can serve before new elections must be called? Deviating from the convention, a 0 is recorded if a limit is not explicitly stated. This gets a 0 in the cases where the constitution with year limits is suspended or unenforced.

Min. Year:2012 Max. Year: 2012
N: 173

Min. Year:1975 Max. Year: 2012
N: 184 n: 6121 \bar{N} : 161 \bar{T} : 33

4.23.13 dpi_fraud Vote Fraud

Were vote fraud or candidate intimidation serious enough to affect the outcome of elections? This variable captures extra-constitutional irregularities, which are recorded only if mentioned in sources. 0 reported for countries where, for example, opposition parties are officially and constitutionally banned or where irregularities are not mentioned (although may still exist); "1" when opposition is officially legal but suppressed anyway. If not an election year, or if elected government has been deposed, refers to most recent election (i.e. the only way to get rid of a "1" is to hold a fair election). Recording is irrespective of whether only opposition claims that fraudulent elections have occurred or whether allegations are backed by independent international observers. Recorded also are any forms of boycotts carried out by important parties before or after parliamentary elections. In the cases

where irregularities are mentioned in the text of the sources, they were recorded. However, there may have been instances of fraud/violence that were not reported, thus resulting in false negatives.

N: 171 n: 4657 \bar{N} : 123 \bar{T} : 27

4.23.31 dpi_legelec Legislative Election Held

"1" if there was a legislative election in this year.

Min. Year:2012 Max. Year: 2012
N: 175

Min. Year:1975 Max. Year: 2012
N: 185 n: 6216 \bar{N} : 164 \bar{T} : 34

4.23.32 dpi_lipc Legislative Electoral Competitiveness

1. No legislature
2. Unelected legislature
3. Elected, 1 candidate
4. 1 party, multiple candidates
5. Multiple parties are legal but only one party won seats
6. Multiple parties DID win seats but the largest party received more than 75% of the seats
7. Largest party got less than 75%. In the case of "Front" parties (as in many Communist nations), the same criteria as in the legislature is used to separate single from multiple parties.

Voting irregularities are picked up elsewhere, and are ignored here. If an elected legislature exists but parties are banned (i.e. a legislature made up of independents), the legislature gets a 4. Constituent assemblies, if convened for the sole purpose of drafting a constitution, are not counted as legislatures (i.e. system gets a 1 if there are no other assemblies). Appointed advisory councils (frequently used in the Middle East and North Africa) are given a 2, but only if they have legislative power. If it is unclear whether there is competition among elected legislators in a single-party system, a "3.5" is recorded. If multiple parties won seats but it is unclear how many the largest party got, a "6.5" is recorded. If it is not clear whether multiple parties ran and only one party won or multiple parties ran and won more than 75% of the seats, a "5.5" is recorded. Assemblies that are elected with indefinite (or life-long) terms are scored based on their competitiveness, then marked down by one. Assemblies that are elected by other groups are scored based on the competitiveness of those groups.

If an assembly is partly elected and party appointed, we score based on how the majority is decided. Assemblies operating under conditions of civil war or where there are power struggles within a country, with the result that its institutions do not control most of the territory or the most important parts of the territory, are scored as 1. This is irrespective of how competitively the assembly has been elected and its formal powers. Even if the right to vote or the right to run for office is restricted to a small sub-group of the population, we still score according to the normal system and make a note.

4.23.34 dpi_mdmh Mean District Magnitude House

Mean District Magnitude House. The weighted average of the number of representatives elected by each constituency size, if available. If not, we use the number of seats divided by the number of constituencies (if both are known). If the constituencies are the provincial or state divisions, we use the number of states or provinces to make this calculation for as long as we know this number and the number of seats. If the only information we have on the number of constituencies comes from the Inter Parliamentary Union (IPU), and the constituencies are not the states/provinces, then we use IPU's number to calculate the Mean District Magnitude for 1995, and leave all unknowns blank. If we have no positive data on district magnitude, we extrapolate backwards from the last year that we do have positive data until we run into a constitutional overhaul or an electoral law change that is either a) mentioned in both sources or b) explicitly says that MDMH changed, but doesn't tell us how it changed. If there is no information about district magnitude, MDMH is coded blank. MDMH is NA where there is no legislature and, if legislature is appointed or members are described as indirectly elected, district magnitude is coded as Indirect. Information about constitutional and electoral law changes were obtained through Europa and Political Handbook yearbooks, as well as online sources (ACE Project, lupinfo.com, IPU Parline).

4.23.36 dpi_mt Can Chief Executive Serve Multiple Terms

If there are formal restraints on an executive's term (NA if not), can s/he serve additional term(s) following the current one? If the executive's term is constitutionally limited (NA if not), can s/he be reelected? The word "additional" is new in 2004, but reflects only an effort to improve clarity, not a change coding rules. Deviating from the convention, a 1 is recorded if a term limit is not explicitly stated. Only limits on immediate reelection count. Prime ministers always get "1".

4.23.37 dpi_muni Municipal Government

Are municipal governments locally elected?

0. Neither local executive nor local legislature are locally elected
1. The executive is appointed, but the legislature elected
2. They are both locally elected

No information, or no evidence of municipal governments, is recorded as blank. If one source has information on a specific period, and the other has no information on a different period, we do not extrapolate from one source to another - no information is always recorded as blank. If there are multiple levels of sub-national government, we consider the lowest level as the "municipal" level. This variable was extensively updated for this version, and as a result, the number of non-missing observations has increased from 42% to 61%.

4.23.60 dpi_system Political System

- 0. Presidential
- 1. Assembly-elected President
- 2. Parliamentary

Systems with unelected executives get a 0. Systems with presidents who are elected directly or by an electoral college (whose only function is to elect the president), in cases where there is no prime minister, also receive a 0. In systems with both a prime minister and a president, we consider the following factors to categorize the system: a) Veto power: president can veto legislation and the parliament needs a supermajority to override the veto. b) Appoint prime minister: president can appoint and dismiss prime minister and / or other ministers. c) Dissolve parliament: president can dissolve parliament and call for new elections. d) Mentioning in sources: If the sources mention the president more often than the PM then this serves as an additional indicator to call the system presidential (Romania, Kyrgyzstan, Estonia, Yugoslavia). The system is presidential if (a) is true, or if (b) and (c) are true. If no information or ambiguous information on (a), (b), (c), then (d). Consult Appendix for specific country examples. Countries in which the legislature elects the chief executive are parliamentary (2), with the following exception: if that assembly or group cannot easily recall him (if they need a 2/3 vote to impeach, or must dissolve themselves while forcing him out) then the system gets a 1.

4.23.70 dpi_yio Chief Executive Years in Office

How many years has the chief executive been in office? Some decision rule is needed to deal with partial years. We use the following: years are counted in which the executive was in power as of January 1 or was elected but hadn't taken office as of January 1. Thus, a "1" is recorded in the year following his/her election. Example: Bush was president as of January 1, 1992, so although he lost the election in November 1992, this variable is recorded as a 4 in 1992, marking Bush's fourth year in office. Although Clinton was elected in November of 1992 and took office in January 1993, since he was president-elect on January 1 1993, this variable is recorded as "1" for 1993. If a country made a transition from colony to independence, we date a chief executive's tenure to the start of independence, not the granting of internal self-government (e.g., Timor-Leste for 2003). Republics of the Soviet Union do not fall into this category - they are tracked from full independence. The executive who formally (de jure) holds power is counted. However, the executive must actually be in the country to be counted. If an executive is deposed by a coup and returns to power within the same calendar year, the coup is counted as "failed" and the executive's rule is considered unbroken. On the other hand, if a parliamentary government resigns and then is re-appointed, this is counted as a new government. See Appendix for examples of ambiguous cases. In the case of Communist nations, we track the general secretary of the Communist party, regardless of who is president/premier. See documentation for original data source for ambiguous cases.

4.24 Axel Dreher

<http://globalization.kof.ethz.ch/>
(Dreher, 2006)
(Data downloaded: 2016-09-20)

KOF Index of Globalization KOF Index of Globalization. All indexes below range between 0 and 100, where higher values indicate a higher degree of globalization.

4.24.1 dr_eg Economic Globalization

Economic globalization is here defined as the long distance flows of goods, capital and services as well as information and perceptions that accompany market exchanges. It is measured by actual flows of trade and investments, and by restrictions on trade and capital such as tariff rates.

Min. Year:2013 Max. Year: 2013
N: 160

Min. Year:1970 Max. Year: 2013
N: 164 n: 6301 \bar{N} : 143 \bar{T} : 38

4.24.2 dr_ig Index of Globalization

The overall index of globalization is the weighted average of the following variables: economic globalization, social globalization and political globalization (dr_eg, dr_sg and dr_pg). Most weight has been given to economic followed by social globalization.

Min. Year:2013 Max. Year: 2013
N: 183

Min. Year:1970 Max. Year: 2013
N: 187 n: 7118 \bar{N} : 162 \bar{T} : 38

4.24.3 dr_pg Political Globalization

Political globalization is measured by the number of embassies and high commissions in a country, the number of international organizations of which the country is a member, the number of UN peace missions the country has participated in, and the number of international treaties that the country has signed since 1945.

Min. Year:2013 Max. Year: 2013
N: 190

Min. Year:1970 Max. Year: 2013
N: 194 n: 7409 \bar{N} : 168 \bar{T} : 38

4.24.4 dr_sg Social Globalization

Social globalization is measured by three categories of indicators. The first is personal contacts, such as telephone traffic and tourism. The second is information flows, e.g. number of Internet users. The third is cultural proximity, e.g. trade in books and number of Ikea warehouses per capita.

4.25 World Bank

<http://go.worldbank.org/UVP09KSJJO>
(Deininger & Squire, 1996)

(Data downloaded: 2016-09-21)

Measuring Income Inequality Database Data set presents data on inequality in the distribution of income.

Note: Only data that have been of good quality (accept) have been included.

4.25.1 ds_gini Gini Index

The variable measures the Gini index of income inequality from observations with highest quality (quality="accept") in the original Deininger & Squire (1996) dataset (higher values indicate more inequality). The Gini coefficient varies theoretically from 0 (perfectly equal distribution of income) to 100 (the society's total income accrues to only one person/household unit).

Note: Both within- and cross-country comparisons should be handled with care, as these Gini coefficients are based on varying sources of information: income or expenditure, gross or net of taxes, individual or household recipient units.

4.26 Global Footprint Network

http://www.footprintnetwork.org/en/index.php/GFN/page/footprint_data_and_results/
(Global Footprint Network, 2016)
(Data downloaded: 2016-09-22)

Global Footprint Data The National Footprint Accounts (NFAs) measure the ecological resource use and resource capacity of nations over time. Based on approximately 6,000 data points per country per year, the Accounts calculate the Footprints of 232 countries, territories, and regions from 1961 to the present, providing the core data needed for all Ecological Footprint analysis worldwide. This Data Package contains Ecological Footprint and biocapacity as well as Human Development and population data to give a first approximation of the biological resource situation of the featured countries. Results from the National Footprint Accounts 2016 and 2015 Edition.

4.26.1 ef_bul Built up land

Ecofootprint, Built-up Land. The built-up land Footprint is calculated based on the area of land covered by human infrastructure: transportation, housing, and industrial structures. Built-up land may occupy what would previously have been cropland.

Min. Year:2011 Max. Year: 2012

4.26.3 ef_crop Cropland Footprint

Ecofootprint, Cropland. Cropland is the most bioproductive of all the land-use types and consists of areas used to produce food and fibre for human consumption, feed for livestock, oil crops, and rubber. The cropland Footprint includes crop products allocated to livestock and aquaculture feed mixes, and those used for fibres and materials. Due to lack of globally consistent data sets, current cropland Footprint calculations do not yet take into account the extent to which farming techniques or unsustainable agricultural practices may cause long-term degradation of soil.

4.26.5 ef_fg Fish Footprint

Ecofootprint, Fish. The fishing grounds Footprint is calculated based on estimates of the maximum sustainable catch for a variety of fish species. These sustainable catch estimates are converted into an equivalent mass of primary production based on the various species' trophic levels. This estimate of maximum harvestable primary production is then divided amongst the continental shelf areas of the world. Fish caught and used in aquaculture feed mixes are included.

4.26.6 ef_for Forest Product Footprint

Ecofootprint, Forest Production. The forest product Footprint, which is calculated based on the amount of lumber, pulp, timber products, and fuel wood consumed by a population on a yearly basis.

Min. Year: 2011 Max. Year: 2012
N: 170

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.26.7 ef_gl Grazing Footprint

Ecofootprint, Grazing. Grazing land is used to raise livestock for meat, dairy, hide, and wool products. The grazing land Footprint is calculated by comparing the amount of livestock feed available in a country with the amount of feed required for all livestock in that year, with the remainder of feed demand assumed to come from grazing land.

4.27 Economist Intelligence Unit

http://www.eiu.com/public/thankyou_download.aspx?activity=download&campaignid=DemocracyIndex2015
(Unit, 2016)
(Data downloaded: 2016-10-10)

The Economist Intelligence Unit's index of democracy The Economist Intelligence Unit (EIU) is an independent business within The Economist Group providing forecasting and advisory services through research and analysis, such as monthly country reports, five-year country economic forecasts, country risk service reports, and industry reports.

4.27.1 eiu_cl Civil libertie

Civil liberties include freedom of speech, expression and the press; freedom of religion; freedom of assembly and association; and the right to due judicial process.

Min. Year: 2013 Max. Year: 2013
N: 165

Min. Year: 2006 Max. Year: 2015
N: 166 n: 1320 \bar{N} : 132 \bar{T} : 8

4.27.2 eiu_dpc Political culture

The Democratic Political Culture index measures the extent to which there is a societal consensus supporting democratic principles.

Min. Year:2013 Max. Year: 2013
N: 165

Min. Year:2006 Max. Year: 2015
N: 166 n: 1320 \bar{N} : 132 \bar{T} : 8

4.27.3 eiu_esp Electoral process and pluralism

This category is based on indicators relating to the condition of having free and fair competitive elections, and satisfying related aspects of political freedom.

Min. Year:2013 Max. Year: 2013
N: 165

Min. Year:2006 Max. Year: 2015
N: 166 n: 1320 \bar{N} : 132 \bar{T} : 8

4.27.4 eiu_fog Functioning of government

The Functioning of Government category is based on indicators relating to e.g. the extent to which control over government is exercised by elected representatives, the capability of the civil service, and the pervasiveness of corruption.

Min. Year:2013 Max. Year: 2013
N: 165

Min. Year:2006 Max. Year: 2015
N: 166 n: 1320 \bar{N} : 132 \bar{T} : 8

4.27.5 eiu_iod Index of Democracy

The Economist Intelligence Unit's index of democracy, on a 0 to 10 scale, is based on the ratings for 60 indicators grouped in five categories: electoral process and pluralism; civil liberties; the functioning of government; political participation; and political culture. Each category has a rating on a 0 to 10 scale, and the overall index of democracy is the simple average of the five category indexes. The category indexes are based on the sum of the indicator scores in the category, converted to a scale of 0 to 10. Adjustments to the category scores are made if countries do not score a 1 in the following critical areas for democracy: 1. Whether national elections are free and fair; 2. The security of voters; 3. The influence of foreign powers on government; 4. The capability of the civil service to implement policies. If the scores for the first three questions are 0 (or 0.5), one point (0.5 point) is deducted from the index in the relevant category (either the electoral process and pluralism or the functioning of government). If the score for 4 is 0, one point is deducted from the functioning of government category index.

Min. Year:2013 Max. Year: 2013
N: 165

Min. Year:2006 Max. Year: 2015
N: 166 n: 1320 \bar{N} : 132 \bar{T} : 8

4.27.6 eiu_pp Political participation

The Political Participation index measures among other things the adult literacy rate, the amount of women in parliament, and the extent to which citizens freely choose to elect representatives and join political parties.

Min. Year:2013 Max. Year: 2013
N: 165

Min. Year:2006 Max. Year: 2015

(Data downloaded: 2016-09-22)

Africa's Growth Tragedy: Policies and Ethnic Divisions Dataset The data set used in the paper Africa's Growth Tragedy: Policies and Ethnic Divisions by William Easterly and Ross Levine. Data about languages is originally from Gunnemark (1991), which is a compilation of data gathered by the international society of geolinguistic scholars. Gunnemark have started collect data for the "Countries, Peoples, and their Languages: The Geolinguistic Handbook" since 1960s, and the book was published at 1991. Therefore, The data is constant for these years and as well it is extended to current days.

4.28.1 el_gunn1 Share of Pop. not Speaking the Official Language

Percent of population not speaking the official language (for period 1960-1991).

4.30 Environmental Performance Index

<http://epi.yale.edu/downloads>
(Hsu et al., 2016)
(Data downloaded: 2016-09-23)

Environmental Performance Data The Environmental Performance Index provides a ranking that shines light on how each country manages environmental issues. The Environmental Performance Index (EPI) ranks how well countries perform on high-priority environmental issues in two broad policy areas: protection of human health from environmental harm and protection of ecosystems. Within these two policy objectives the EPI scores country performance in nine issue areas comprised of 20 indicators. Indicators in the EPI measure how close countries are to meeting internationally established targets or, in the absence of agreed-upon targets, how they compare to the range of observed countries.

Note: In many cases the EPI variables lack actual observations and rely on imputation. Please refer to the original documentation on more information about this.

4.30.1 epi_acsat Access to Sanitation

Access to Sanitation : Percentage of population with access to improved sanitation.

Min. Year:2014 Max. Year: 2014
N: 191

Min. Year:2002 Max. Year: 2015
N: 192 n: 2141 \bar{N} : 153 \bar{T} : 11

4.30.2 epi_agsub Agricultural Subsidies

Agricultural Subsidies: Subsidies are expressed in price of their product in the domestic market (plus any direct output subsidy) less its price at the border, expressed as a percentage of the border price (adjusting for transport costs and quality differences).

Min. Year:2014 Max. Year: 2014
N: 161

Min. Year:2002 Max. Year: 2015
N: 162 n: 1847 \bar{N} : 132 \bar{T} : 11

4.30.3 epi_aze Critical Habitat Protection

Critical Habitat Protection: Percent of critical habitat sites as designed by the Alliance for Zero Extinction protected.

Min. Year:2014 Max. Year: 2014
N: 81

Min. Year:2002 Max. Year: 2015
N: 81 n: 928 \bar{N} : 66 \bar{T} : 11

4.30.4 epi_chmort Child Mortality

Child Mortality: Probability of dying between a child's first and fifth birthdays (between age 1 and 5).

Min. Year:2014 Max. Year: 2014
N: 185

Min. Year:2002 Max. Year: 2015
N: 186 n: 2135 \bar{N} : 153 \bar{T} : 11

4.30.5 epi_co2kwh Trend in CO2 Emissions per KWH

Trend in CO2 Emissions per KWH: Change in CO2 emissions from electricity and heat production.

Min. Year:2014 Max. Year: 2014
N: 114

Min. Year:2002 Max. Year: 2015
N: 114 n: 1349 \bar{N} : 96 \bar{T} : 12

4.30.6 epi_eh Environmental Health

Environmental Health: Index calculated from three indices : Health Impacts, Air Quality and Water and Sanitation.

Min. Year:2014 Max. Year: 2014
N: 184

Min. Year:2002 Max. Year: 2015
N: 185 n: 2134 \bar{N} : 152 \bar{T} : 12

4.30.7 epi_ehair Air Quality

Air Quality: Index calculated from three variables : Household Air Quality, Air Pollution - Average Exposure to PM2.5 and Air Pollution - PM2.5 Exceedance.

Min. Year:2014 Max. Year: 2014
N: 191

Min. Year:2002 Max. Year: 2015
N: 192 n: 2141 \bar{N} : 153 \bar{T} : 11

4.30.8 epi_ehwater Water and Sanitation

Water and Sanitation: Index calculated from two variables :Access to Drinking Water and Access to Sanitation.

Min. Year:2014 Max. Year: 2014
N: 191

Min. Year:2002 Max. Year: 2015
N: 192 n: 2141 \bar{N} : 153 \bar{T} : 11

4.30.9 epi_epi Environmental Performance Index

Environmental Performance Index: Index calculated from two indices : Environmental Health (40%) and Ecosystem Vitality (60%).

Min. Year:2014 Max. Year: 2014
N: 178

Min. Year:2002 Max. Year: 2015
N: 179 n: 2128 \bar{N} : 152 \bar{T} : 12

4.30.10 epi_ev Ecosystem Vitality

Ecosystem Vitality: Index calculated from five indices : Water Resources, Agriculture, Forests, Fisheries and Biodiversity and Habitat.

Min. Year:2014 Max. Year: 2014
N: 178

Min. Year:2002 Max. Year: 2015
N: 179 n: 2128 \bar{N} : 152 \bar{T} : 12

4.30.11 epi_evag Agriculture

Agriculture: Index calculated from two variables : Agricultural Subsidies and Pesticide Regulation.

Min. Year:2014 Max. Year: 2014
N: 187

Min. Year:2002 Max. Year: 2015
N: 188 n: 2137 \bar{N} : 153 \bar{T} : 11

4.30.12 epi_evbh Biodiversity and Habitat

Biodiversity and Habitat: Index calculated from four variables : Terrestrial Protected Areas (National Biome Weights), Terrestrial Protected Areas (Global Biome Weights), Marine Protected Areas and Critical Habitat Protection.

Min. Year:2014 Max. Year: 2014
N: 189

Min. Year:2002 Max. Year: 2015
N: 190 n: 2139 \bar{N} : 153 \bar{T} : 11

4.30.13 epi_evclimate Climate and Energy

Climate and Energy: Index calculated from three variables : Trend in Carbon Intensity, Change of Trend in Carbon Intensity and Trend in CO2 Emissions per KWH. Note that the missing code (-911) has been recoded to missing (.).

Min. Year:2014 Max. Year: 2014
N: 133

Min. Year:2002 Max. Year: 2015
N: 133 n: 1544 \bar{N} : 110 \bar{T} : 12

4.30.14 epi_evfish Fisheries

Fisheries: Index calculated from two variables : Coastal Shelf Fishing Pressure and Fish Stocks. Note that the missing code (-911) has been recoded to missing (.).

Min. Year:2014 Max. Year: 2014
N: 145

Min. Year:2002 Max. Year: 2015
N: 146 n: 1615 \bar{N} : 115 \bar{T} : 11

4.30.15 epi_evforest Change in Forest Cover

Change in Forest Cover: Forest loss - Forest gain in > 50% tree cover, as compared to 2000 levels. Note that the missing code (-911) has been recoded to missing (.).

Min. Year:2014 Max. Year: 2014
N: 138

Access to Drinking Water: Percentage of population with access to improved drinking water source.

Min. Year:2014 Max. Year: 2014
N: 191

Min. Year:2002 Max. Year: 2015
N: 192 n: 2141 \bar{N} : 153 \bar{T} : 11

4.31 European Social Survey

<http://www.europeansocialsurvey.org/data/round-index.html>

(European Social Survey, 2016)

(Data downloaded: 2016-10-19)

ESS1-6, European Social Survey - Cumulative File Rounds 1-6 The European Social Survey (ESS) is an academically-driven multi-country survey, which has been administered in over 30 countries to date. Its three aims are, firstly - to monitor and interpret changing public attitudes and values within Europe and to investigate how they interact with Europe's changing institutions, secondly - to advance and consolidate improved methods of cross-national survey measurement in Europe and beyond, and thirdly - to develop a series of European social indicators, including attitudinal indicators.

4.31.1 ess_trlegal Trust in Legal System

Please tell me on a score of 0-10 how much you personally trust each of the institutions I read out. 0 means you do not trust an institution at all, and 10 means you have complete trust. The Legal System.

4.33 Food and Agricultural Organization of the United Nations (FAO)

<http://www.fao.org/forest-resources-assessment/explore-data/en/>

(Food and Agricultural Organization of the United Nations, 2016b) (Food and Agricultural Organization of the United Nations, 2016a)

(Data downloaded: 2016-10-13)

FAO Statistics The data shows the forest coverage and the volume of fish caught measured in tons, and excludes other aquatic animals and plants. The data is divided by capture and aquaculture, and marine and inland waters. Capture for all purposes are included: commercial, recreational etc.

4.34 Fearon

<http://www.stanford.edu/~jfearon/>
(Fearon, 2003)
(Data downloaded: 2016-10-11)

Ethnic and Cultural Diversity by Country Used in the article Ethnic and Cultural Diversity by Country published in Journal of Economic Growth, containing data on 822 ethnic groups in 160 countries that made up at least 1 percent of the country population in the early 1990s.

4.34.1 fe_cultdiv Cultural Diversity

This measure modifies fractionalization (fe_etfra) so as to take some account of cultural distances between groups, measured as the structural distance between languages spoken by different groups in a country. If the groups in a country speak structurally unrelated languages, their cultural diversity index will be the same as their level of ethnic fractionalization (fe_etfra). The more similar are the languages spoken by different ethnic groups, however, the more will this measure be reduced below the level of ethnic fractionalization for that country. The values are assumed to be constant for all years.

Min. Year:2013 Max. Year: 2013
N: 153

Min. Year:1946 Max. Year: 2016
N: 155 n: 8684 \bar{N} : 122 \bar{T} : 56

4.34.2 fe_etfra Ethnic Fractionalization

Restricting attention to groups that had at least 1 percent of country population in the 1990s, Fearon identifies 822 ethnic and "ethnoreligious" groups in 160 countries. This variable reflects the probability that two randomly selected people from a given country will belong to different such groups. The variable thus ranges from 0 (perfectly homogeneous) to 1 (highly fragmented). The values are assumed to be constant for all years.

4.35 Fund for Peace

<http://ffp.statesindex.org/>
(Haken et al., n.d.)
(Data downloaded: 2016-09-23)

Fragile States Index The Fragile States Index (Failed States Index) , produced by The Fund for Peace, is a critical tool in highlighting not only the normal pressures that all states experience, but also in identifying when those pressures are pushing a state towards the brink of failure. By highlighting pertinent issues in weak and failing states, the FSI - and the social science framework and software application upon which it is built - makes political risk assessment and early warning of conflict accessible to policy-makers and the public at large. The strength of the FSI is its ability to distill millions of pieces of information into a form that is relevant as well as easily digestible and informative. Daily, The Fund for Peace collects thousands of reports and information from around the world, detailing the existing social, economic and political pressures faced by each of the 178 countries that we analyze. The FSI is based on The Fund for Peace's proprietary Conflict Assessment Software Tool (CAST) analytical platform. Based on comprehensive social science methodology, data from three primary sources is triangulated and subjected to critical review to obtain final scores for the FSI. Millions of documents are analyzed every year. By applying highly specialized search parameters, scores are apportioned for every country based on twelve key political, social and economic indicators (which in turn include over 100 sub-indicators) that are the result of years of painstaking expert social science research. The Fund for Peace's software performs content analysis on this collected information. Through sophisticated search parameters and algorithms, the CAST software separates the relevant data from the irrelevant. Guided by twelve primary social, economic and political indicators (each split into an average of 14 sub-indicators), the CAST software analyzes the collected information using specialized search terms that flag relevant items. Using various algorithms, this analysis is then converted into a score representing the significance of each of the various pressures for a given country. The content analysis is further triangulated with two other key aspects of the overall assessment process: quantitative analysis and qualitative inputs based on major events in the countries examined. The scores produced by The Fund for Peace's software are then compared with a comprehensive set of vital statistics - as well as human analysis - to ensure that the software has not misinterpreted the raw data. Though the basic data underpinning the Failed States Index is already freely and widely available electronically, the strength of the analysis is in the methodological rigor and the systematic integration of a wide range of data sources.

Note: the principal of data timing was changed. Data from reports correspond to the situation from the previous year. The 2016 Fragile States Index, comprises data collected between January 1, 2015, and December 31, 2015. Therefore data from Report 2016 is recorded for 2015 and the same logic works for all other years. data for 2004 is from Report 2005.

4.35.1 ffp_dp Demographic Pressure

Demographic Pressure - Pressures on the population such as disease and natural disasters make it difficult for the government to protect its citizens or demonstrate a lack of capacity or will. Includes pressures and measures related to natural disasters, disease, environment, pollution, food scarcity, malnutrition, water scarcity, population growth, youth bulge, mortality.

Min. Year:2013 Max. Year: 2013
N: 177

Min. Year:2004 Max. Year: 2015
N: 180 n: 1988 \bar{N} : 166 \bar{T} : 11

4.35.2 ffp_eco Poverty and Economic Decline

Poverty and Economic Decline - Poverty and economic decline strain the ability of the state to provide for its citizens if they cannot provide for themselves and can create friction between the "haves" and the "have nots". Includes pressures and measures related to economic deficit, government debt, unemployment, youth employment, purchasing power, GDP per capita, GDP growth, inflation.

Min. Year:2013 Max. Year: 2013
N: 177

Min. Year:2004 Max. Year: 2015
N: 180 n: 1988 \bar{N} : 166 \bar{T} : 11

4.35.3 ffp_ext External Intervention

External Intervention - When the state fails to meet its international or domestic obligations, external actors may intervene to provide services or to manipulate internal affairs. Includes pressures and measures related to foreign assistance, presence of peacekeepers, presence of UN missions, foreign military intervention, sanctions, credit rating.

Min. Year:2013 Max. Year: 2013
N: 177

Min. Year:2004 Max. Year: 2015
N: 180 n: 1988 \bar{N} : 166 \bar{T} : 11

4.35.4 ffp_fe Factionalized Elites

Factionalized Elites - When local and national leaders engage in deadlock and brinkmanship for political gain, this undermines the social contract. Includes pressures and measures related to power struggles, defectors, flawed elections, political competition.

Min. Year:2013 Max. Year: 2013
N: 177

Min. Year:2004 Max. Year: 2015
N: 180 n: 1988 \bar{N} : 166 \bar{T} : 11

4.35.5 ffp_fsi Fragile States Index

Fragile States Index (The Failed States Index) includes an examination of the pressures on states, their vulnerability to internal conflict and societal deterioration. The country ratings are based on the total scores of 12 indicators:

Social Indicators

1. Mounting Demographic Pressures
2. Massive Movement of Refugees or Internally Displaced Persons creating Complex Humanitarian Emergencies
3. Legacy of Vengeance-Seeking Group Grievance or Group Paranoia
4. Chronic and Sustained Human Flight.

Economic Indicators

5. Uneven Economic Development along Group Lines
6. Sharp and/or Severe Economic Decline

Political Indicators

7. Criminalization and/or Delegitimization of the State
8. Progressive Deterioration of Public Services
9. Suspension or Arbitrary Application of the Rule of Law and Widespread Violation of Human Rights
10. Security Apparatus Operates as a "State Within a State"
11. Rise of Factionalized Elites
12. Intervention of Other States or External Political Actors.

For each indicator, the ratings are placed on a scale of 0 to 10, with 0 being the lowest intensity (most stable) and 10 being the highest intensity (least stable). The total score is the sum of the 12 indicators and is on a scale of 0-120.

Min. Year:2013 Max. Year: 2013
N: 177

Min. Year:2004 Max. Year: 2015
N: 180 n: 1988 \bar{N} : 166 \bar{T} : 11

4.35.6 ffp_gg Group Grievance

Group Grievance - When tension and violence exists between groups, the state's ability to provide security is undermined and fear and further violence may ensue. Includes pressures and measures related to discrimination, powelessness, ethnic violence, communal violence, sectarian violence, religious violence.

Min. Year:2013 Max. Year: 2013
N: 177

Min. Year:2004 Max. Year: 2015
N: 180 n: 1988 \bar{N} : 166 \bar{T} : 11

4.35.7 ffp_hf Human Flight and Brain Drain

Human Flight and Brain Drain - When there is little opportunity, people migrate, leaving a vacuum of human capital. Those with resources also often leave before, or just as, conflicts erupts. Includes

pressures and measures related to migration per capita, human capital, emigration of educated population.

Min. Year:2013 Max. Year: 2013
N: 177

Min. Year:2004 Max. Year: 2015
N: 180 n: 1988 \bar{N} : 166 \bar{T} : 11

4.35.8 ffp_hr Human Rights and Rule of Law

Human Rights and Rule of Law - When human rights are violated or unevenly protected, the state is failing in its ultimate responsibility. Includes pressures and measures related to press freedom, civil liberties, political freedoms, human trafficking, political prisoners, incarceration, religious persecution, torture, executions.

Min. Year:2013 Max. Year: 2013
N: 177

Min. Year:2004 Max. Year: 2015
N: 180 n: 1988 \bar{N} : 166 \bar{T} : 11

4.35.9 ffp_ps Public Services

Public Services - The provision of health, education, and sanitation services, among others, are key roles of the state. Includes pressures and measures related to policing, criminality, education provision, literacy, water and sanitation, infrastructure, quality healthcare, telephony, internet access, energy reliability, roads.

Min. Year:2013 Max. Year: 2013
N: 177

Min. Year:2004 Max. Year: 2015
N: 180 n: 1988 \bar{N} : 166 \bar{T} : 11

4.35.10 ffp_ref Refugees and IDPs

Refugees and IDPs - Pressures associated with population displacement. This strains public services and has the potential to pose a security threat. Includes pressures and measures related to displacement, refugee camps, IDP camps, disease related to displacement, refugees per capita, IDPs per capita, absorption capacity.

Min. Year:2013 Max. Year: 2013
N: 177

Min. Year:2004 Max. Year: 2015
N: 180 n: 1988 \bar{N} : 166 \bar{T} : 11

4.35.11 ffp_sec Security Apparatus

Security Apparatus - The security apparatus should have monopoly on the use of legitimate force. The social contract is weakened where this is affected by competing groups. Includes pressures and measures related to internal conflict, small arms proliferation, riots and protests, fatalities from conflict, military coups, rebel activity, militancy, bombings, political prisoners.

Min. Year:2013 Max. Year: 2013
N: 177

Min. Year:2004 Max. Year: 2015
N: 180 n: 1988 \bar{N} : 166 \bar{T} : 11

4.35.12 ffp_sl State Legitimacy

State Legitimacy - Corruption and lack of representativeness in the government directly undermine the social contract. Includes pressures and measures related to corruption, government effectiveness, political participation, electoral process, level of democracy, illicit economy, drug trade, protests and demonstrations, power struggles.

Min. Year:2013 Max. Year: 2013
N: 177

4.36 Freedom House

<http://www.freedomhouse.org/report/freedom-world-aggregate-and-subcategory-scores>
(House, 2016a) (House, 2016b)
(Data downloaded: 2016-09-15)

Freedom of the World Freedom in the World is an annual comparative assessment of political rights and civil liberties that this year covers 195 countries and 15 related and disputed territories.

Since the report began in 1972, each country and territory has been assigned two numerical ratings - one for political rights and one for civil liberties - based on a 1 to 7 scale. Underlying those ratings are more detailed assessments of country situations based on a 40-point scale for political rights and a 60-point scale for civil liberties. Freedom House now releases these aggregate scores for political rights and civil liberties for each country in order to provide more nuanced information about country trends beyond the 7-point rating scales used previously.

In addition, in order to generate debate and discussions within countries as to areas that are most in need of reform, Freedom House releases the scores for the seven subcategories that fall under political rights and civil liberties. These subcategories, drawn from the Universal Declaration of Human Rights, represent the fundamental components of freedom, which include an individual's ability to:

- Vote freely in legitimate elections;
- Participate freely in the political process;
- Have representatives that are accountable to them;
- Exercise freedoms of expression and belief;
- Be able to freely assemble and associate;
- Have access to an established and equitable system of rule of law;
- Enjoy social and economic freedoms, including equal access to economic opportunities and the right to hold private property.

Note: The 1982 edition of Freedom in the World covers the period Jan 1981- Aug 1982 (=1981 in our dataset). The 1983-84 edition covers the period Aug 1982 - Nov 1983 (=1983 in our dataset). This leaves 1982 empty. For 1972, South Africa was in the original data rated as "White" (fh_cl: 3, fh_pr: 2, fh_status: Free) and "Black" (fh_cl: 6, fh_pr: 5, fh_status: Not Free). We treat South Africa 1972 as missing.

Freedom of the Press, an annual report on media independence around the world, assesses the degree of print, broadcast, and digital media freedom in 199 countries and territories. Published since 1980, it provides numerical scores and country narratives evaluating the legal environment for the media, political pressures that influence reporting, and economic factors that affect access to news and information. Freedom of the Press is the most comprehensive data set available on global media freedom and serves as a key resource for policymakers, international institutions, journalists, activists, and scholars worldwide.

4.36.1 fh_aor Associational and Organizational Rights

Associational and Organizational Rights - The variable evaluates the freedom of assembly, demonstrations and open public discussion; the freedom for nongovernmental organization; and the freedom for trade unions, peasant organizations and other professional and private organizations. Countries are graded between 0 (worst) and 12 (best).

Min. Year:2013 Max. Year: 2013
N: 194

Min. Year:2004 Max. Year: 2015
N: 196 n: 2317 \bar{N} : 193 \bar{T} : 12

4.36.2 fh_cl Civil Liberties

Civil Liberties - Civil liberties allow for the freedoms of expression and belief, associational and organizational rights, rule of law, and personal autonomy without interference from the state. The more specific list of rights considered vary over the years. Countries are graded between 1 (most free) and 7 (least free).

Min. Year:2013 Max. Year: 2013
N: 194

Min. Year:1972 Max. Year: 2015
N: 207 n: 7622 \bar{N} : 173 \bar{T} : 37

4.36.3 fh_ep Electoral Process

Electoral Process - The variable measures to what extent the national legislative representatives and the national chief authority are elected through free and fair elections. Countries are graded between 0 (worst) and 12 (best).

Min. Year:2013 Max. Year: 2013
N: 194

Min. Year:2004 Max. Year: 2015
N: 196 n: 2317 \bar{N} : 193 \bar{T} : 12

4.36.4 fh_feb Freedom of Expression and Belief

Freedom of Expression and Belief - The variable measures the freedom and independence of the media and other cultural expressions; the freedom of religious groups to practice their faith and express themselves; the academic freedom and freedom from extensive political indoctrination in the educational system; and the ability of the people to engage in private (political) discussions without fear of harassment or arrest by the authorities. Countries are graded between 0 (worst) and 16 (best).

Min. Year:2013 Max. Year: 2013
N: 194

Min. Year:2004 Max. Year: 2015
N: 196 n: 2317 \bar{N} : 193 \bar{T} : 12

4.36.5 fh_fog Functioning of Government

Functioning of Government - The variable examines in what extent the freely elected head of government and a national legislative representative determine the policies of the government; if the government is free from pervasive corruption; and if the government is accountable to the electorate between elections and operates with openness and transparency. Countries are graded between 0 (worst) and 12 (best).

Min. Year:2013 Max. Year: 2013
N: 194

Min. Year:2004 Max. Year: 2015
N: 196 n: 2317 \bar{N} : 193 \bar{T} : 12

4.36.6 fh_fotpa Laws and regulations that influence media content (2001-2014)

The variable \tilde{T} Laws and Regulations that Influence Media Content encompasses an examination of both the laws and regulations that could influence media content and the government's inclination to use these laws and legal institutions to restrict the media's ability to operate. Freedom House assesses the positive impact of legal and constitutional guarantees for freedom of expression; the potentially negative aspects of security legislation, the penal code, and other criminal statutes; penalties for libel and defamation; the existence of and ability to use freedom of information legislation; the independence of the judiciary and of official media regulatory bodies; registration requirements for both media outlets and journalists; and the ability of journalists' groups to operate freely. In 1993-1995 the scale varied from 0-20, in 1996 and onwards from 0-30. 0 indicates more freedom.

Min. Year: 2013 Max. Year: 2013

4.36.15 fh_fotpcpr Economic Influences over Print Media Content (1993-2000)

Economic Influences over Media Content: Print Media (1993-2000): The third sub-category examines the economic environment for the media. This includes the structure of media ownership; transparency and concentration of ownership; the costs of establishing media as well as of production and distribution; the selective withholding of advertising or subsidies by the state or other actors; the impact of corruption and bribery on content; and the extent to which the economic situation in a country impacts the development of the media. In 1993-1995 the scale varied from 0-20, from 1996 and onwards from 0-30. 0 indicates more freedom.

4.36.16 fh_fotpdbr Repressive Actions: Broadcast Media (1993-2000)

Repressive Actions: Broadcast Media (1993-2000). This variable reflects actual press-freedom violations (killing of journalists, physical violence against journalists or facilities, censorship, self-censorship, harassment, expulsions, etc). In 1993-1995 the scale varied from 0-40, in 1996-2000 from 0-10. Since 2001 the Freedom House includes such violations within the respective fh_pol and fh_econ categories as cases of actual political or economic pressure on the content of information. 0 indicates more freedom.

4.36.21 fh_ipolity2 Level of Democracy (Freedom House/Imputed Polity)

Scale ranges from 0-10 where 0 is least democratic and 10 most democratic. Average of Freedom House (fh_pr and fh_cl) is transformed to a scale 0-10 and Polity (p_polity2) is transformed to a scale 0-10. These variables are averaged into fh_ipolity2. The imputed version has imputed values for countries where data on Polity is missing by regressing Polity on the average Freedom House measure. Hadenius & Teorell (2005) show that this average index performs better both in terms of validity and reliability than its constituent parts.

4.36.24 fh_ppp Political Pluralism and Participation

Political Pluralism and Participation - This variable encompasses an examination of the right of the people to freely organize in political parties; the existence of an opposition with a realistic possibility to increase its support; the ability of the people to make political choices free from domination by the military, totalitarian parties or other powerful groups; and the existence of full political rights for all minorities. Countries are graded between 0 (worst) and 16 (best).

Min. Year:2013 Max. Year: 2013
N: 194

Min. Year:2004 Max. Year: 2015
N: 196 n: 2317 \bar{N} : 193 \bar{T} : 12

4.36.25 fh_pr Political Rights

Political Rights - Political rights enable people to participate freely in the political process, including the right to vote freely for distinct alternatives in legitimate elections, compete for public office, join political parties and organizations, and elect representatives who have a decisive impact on public policies and are accountable to the electorate. The specific list of rights considered varies over the years. Countries are graded between 1 (most free) and 7 (least free).

4.36.27 fh_status Freedom Status

1. Free
2. Partly Free
3. Not Free

Until 2003, countries whose combined average ratings for Political Rights and Civil Liberties fell between 1.0 and 2.5 were designated "Free"; between 3.0 and 5.5 "Partly Free", and between 5.5 and 7.0 "Not Free". Since then, countries whose ratings average 1.0 to 2.5 are considered "Free", 3.0 to 5.0 "Partly Free", and 5.5 to 7.0 "Not Free".

4.37 Fraser Institute

http://www.freetheworld.com/datasets_efw.html

(Gwartney et al., 2016)

(Data downloaded: 2016-09-26)

Economic Freedom of the World Dataset The index published in Economic Freedom of the World measures the degree to which the policies and institutions of countries are supportive of economic freedom. The cornerstones of economic freedom are personal choice, voluntary exchange, freedom to enter markets and compete, and security of the person and privately owned property. The EFW index now ranks 159 countries and territories. Data are available for approximately 100 nations and territories back to 1980, and many back to 1970. This data set makes it possible for scholars to analyze the impact of both cross-country differences in economic freedom and changes in that freedom across a time frame of three and a half decades.

4.37.1 fi_ftradeint Freedom to Trade Internationally (current)

The index ranges from 0-10 where 0 corresponds to "increasing tax rate on international trade", "slow import or export process", "small trade sectors relative to the population and geographic size", "exchange rate controls are present and a black-market exists", and "restrictions on the freedom of citizens to engage in capital market exchange with foreigners" and 10 corresponds to "no specific taxes on international trade", "swift import or export process", "large trade sectors relative to the population and geographic size", "no black-market exchange rate", and "no restrictions on the freedom of citizens to engage in capital market exchange with foreigners". The index consists of the following indicators: Taxes on international trade, Regulatory trade barriers, Actual size of trade sector compared to expected size, Difference between official exchange rate and black market rate International capital market controls.

4.37.3 fi_index Economic Freedom of the World Index (current)

The index is founded upon objective components that reflect the presence (or absence) of economic freedom. The index comprises 21 components designed to identify the consistency of institutional arrangements and policies with economic freedom in five major areas: size of government (fi_sog), legal structure and security of property rights (fi_legprop), access to sound money (fi_sm), freedom to trade internationally (fi_ftradeint), regulation of credit, labor and business (fi_reg). The index ranges from 0-10 where 0 corresponds to "less economic freedom" and 10 to "more economic freedom". This is the version of the index published at the current year of measurement, without taking methodological changes over time into account.

Min. Year:2013 Max. Year: 2014
N: 158

Min. Year:1970 Max. Year: 2014
N: 159 n: 2653 \bar{N} : 59 \bar{T} : 17

4.37.4 fi_index_cl Economic Freedom of the World Index (chain-linked)

One problem with the version of the index of economic freedom (fi_index) is that the underlying data is more complete in recent years than in earlier years. As a result, changes in the index ratings over time may reflect the fact that some components are missing in some years but not in others. The problem of missing components threatens the comparability of the index ratings over time. In order to correct for this problem, the Fraser Institute has constructed a chain-linked summary index of economic freedom that is based on the 2000 rating as a base year. Changes to the index going backward (and forward) in time are then based only on changes in components that were present in adjacent years. The chain-linked methodology means that a country's rating will change across time periods only when there is a change in ratings for components present during both of the overlapping years. This is precisely what one would want when making comparisons across time periods.

4.39 Gibney, Cornett & Wood

<http://www.politicalterroryscale.org/Data/>

(Mark Gibney & Arnon, 2016)

(Data downloaded: 2016-09-26)

Political Terror Scale The PTS was first developed in the early 1980s, well before "terrorism" took on much of its present meaning. The "terror" in the PTS refers to state-sanctioned killings, torture, disappearances and political imprisonment that the Political Terror Scale measures. The PTS is computed annually by Mark Gibney, Reed Wood and a group of volunteers well versed in human rights practices. The "data" for the PTS is provided by the annual reports on human rights practices that are published by Amnesty International (A) and the U.S. State Department (S).

4.39.1 gd_ptsa Political Terror Scale - Amnesty International

Political Terror Scale Levels from the yearly country reports of Amnesty International:

1. Countries under a secure rule of law, people are not imprisoned for their view, and torture is rare or exceptional. Political murders are extremely rare.
2. There is a limited amount of imprisonment for nonviolent political activity. However, few persons are affected, torture and beatings are exceptional. Political murder is rare.
3. There is extensive political imprisonment, or a recent history of such imprisonment. Execution or other political murders and brutality may be common. Unlimited detention, with or without a trial, for political views is accepted.
4. Civil and political rights violations have expanded to large numbers of the population. Murders, disappearances, and torture are a common part of life. In spite of its generality, on this level terror affects those who interest themselves in politics or ideas.
5. Terror has expanded to the whole population. The leaders of these societies place no limits on the means or thoroughness with which they pursue personal or ideological goals.

Min. Year: 2011 Max. Year: 2015
N: 162

Min. Year: 1976 Max. Year: 2015
N: 189 n: 5232 \bar{N} : 131 \bar{T} : 28

4.39.2 gd_ptsh Political Terror Scale - Human Rights Watch

Political Terror Scale Levels from the Human Rights Watch's World Reports:

1. Countries under a secure rule of law, people are not imprisoned for their view, and torture is rare or exceptional. Political murders are extremely rare.
2. There is a limited amount of imprisonment for nonviolent political activity. However, few persons are affected, torture and beatings are exceptional. Political murder is rare.
3. There is extensive political imprisonment, or a recent history of such imprisonment. Execution or other political murders and brutality may be common. Unlimited detention, with or without a trial, for political views is accepted.
4. Civil and political rights violations have expanded to large numbers of the population. Murders, disappearances, and torture are a common part of life. In spite of its generality, on this level terror affects those who interest themselves in politics or ideas.
5. Terror has expanded to the whole population. The leaders of these societies place no limits on the means or thoroughness with which they pursue personal or ideological goals.

4.40 Institute for Health Metrics and Evaluation

<http://ghdx.healthdata.org/record/global-educational-attainment-1970-2015>
(Institute for Health Metrics and Evaluation (IHME), 2015)
(Data downloaded: 2016-09-26)

Global Educational Attainment 1970-2015 These are IHME results data from a global analysis of educational attainment spanning the last 50 years. These data are an update to earlier estimates (Educational Attainment and Child Mortality Estimates by Country 1970-2009) and inform the IHME policy report "A Hand Up: Global Progress Towards Universal Education," as well as the Social Determinants of Health Visualization, which is supported by the Center for Health Trends and Forecasts at IHME.

This data file provides estimates of average years of educational attainment per capita for people over the age of 15 for the years 1970-2015 by year, sex, and age group for 188 countries, 21 GBD regions, 7 GBD super regions, and the global aggregate. Age-standardized and population-weighted estimates are included for females 15-44 and for both sexes for the age group 25+

4.41 Global Integrity Report

<http://www.globalintegrity.org>
(Global Integrity, 2011)
(Data downloaded: 2016-09-26)

Global Integrity Report - Data The Global Integrity Report is an essential guide to anti-corruption institutions and mechanisms around the world, intended to help policymakers, advocates, journalists and citizens identify and anticipate the areas where corruption is more likely to occur

within the public sector. The Report evaluates both anticorruption legal frameworks and the practical implementation and enforcement of those frameworks, and takes a close look at whether citizen can effectively access and use anti-corruption safeguards. Each country assessment contained in the Global Integrity Report comprises two core elements: a qualitative Reporter’s Notebook and a quantitative Integrity Indicators scorecard. An Integrity Indicators scorecard assesses the existence, effectiveness, and citizen access to key governance and anti-corruption mechanisms through more than 300 actionable indicators. They are scored by a lead in-country researcher and blindly reviewed by a panel of peer reviewers, a mix of other in-country experts as well as outside experts. Reporter’s Notebooks are reported and written by in-country journalists and blindly reviewed by the same peer review panel.

4.41.1 gir_acrl Anti-Corruption and Rule of Law

This category examines a country’s anti-corruption laws, the country’s anti-corruption agency (or equivalent mechanism), citizen access to justice, and law enforcement accountability.

Min. Year:2010 Max. Year: 2011
N: 60

Min. Year:2004 Max. Year: 2011
N: 94 n: 251 \bar{N} : 31 \bar{T} : 3

4.41.2 gir_acs Administration and Civil Service

This category examines administration and civil service regulations, whistleblower protections, and transparency around government procurement and privatization.

Min. Year:2010 Max. Year: 2011
N: 60

Min. Year:2004 Max. Year: 2011
N: 94 n: 251 \bar{N} : 31 \bar{T} : 3

4.41.3 gir_csmi Civil Society, Media, Access to Information

This category examines civil society organizations working on anti-corruption issues, the media’s effectiveness in reporting on corruption (including licensing requirements), and public access to information.

Min. Year:2010 Max. Year: 2011
N: 60

Min. Year:2004 Max. Year: 2011
N: 94 n: 251 \bar{N} : 31 \bar{T} : 3

4.41.4 gir_e Elections

This category assesses voting and elections integrity as well as regulations governing the financing of political parties and candidates.

Min. Year:2010 Max. Year: 2011
N: 60

Min. Year:2004 Max. Year: 2011
N: 94 n: 251 \bar{N} : 31 \bar{T} : 3

4.41.5 gir_ga Government Accountability

This category explores the existence and effectiveness of conflicts of interest regulations, "cooling off" periods for former government officials, and asset disclosure requirements in the executive, legislative, and judicial branches. Budget transparency is also assessed.

Min. Year:2010 Max. Year: 2011
N: 60

Min. Year:2004 Max. Year: 2011
N: 94 n: 251 \bar{N} : 31 \bar{T} : 3

4.41.6 gir_gii Global Integrity Index

The Global Integrity Index assesses the existence, effectiveness, and citizen access to key anti-corruption mechanisms at the national level in a country. It does not measure corruption per se or perceptions of corruption. Nor does it measure governance "outputs". Instead, the index quantitatively assesses the opposite of corruption, that is, the access that citizens and businesses have to a country's government, their ability to monitor its behavior, and their ability to seek redress and advocate for improved governance. In-country teams of social scientists and journalists report on the de jure as well as de facto reality of corruption and anticorruption mechanisms. The index grades countries on a 0 to 100 scale, with 0 being the worst score and 100 the best. The overall index is the average of the following six variables (which in turn are built on more than 300 indicators): Civil Society, Media, Access to Information, Elections, Government Accountability, Administration and Civil Service, Oversight and Regulation, Anti-Corruption and Rule of Law.

Note: The original source use a different scale for the year 2004. We have rescaled the data for this year to the same scale as the following years (0-100).

Min. Year:2010 Max. Year: 2011
N: 60

Min. Year:2004 Max. Year: 2011
N: 94 n: 251 \bar{N} : 31 \bar{T} : 3

4.41.7 gir_or Oversight and Regulation

This category assesses the effectiveness of the national ombudsman (or equivalent mechanism), supreme audit institution, taxes and customs agencies, transparency surrounding state-owned enterprises, and business licensing requirements.

Min. Year:2010 Max. Year: 2011
N: 60

Min. Year:2004 Max. Year: 2011
N: 94 n: 251 \bar{N} : 31 \bar{T} : 3

4.42 Gleditsch

<http://privatewww.essex.ac.uk/~ksg/exptradegdp.html>
(K. S. Gleditsch, 2002)
(Data downloaded: 2016-09-27)

Expanded Trade and GDP Data These data provide estimates of trade flows between independent states (1948-2000) and GDP per capita of independent states (1950-2011). Version 6.

4.42.1 gle_cgdpc GDP per Capita (Current Prices)

GDP per capita (Current prices).

Min. Year:2011 Max. Year: 2011
N: 191

4.43 Bormann & Golder

<http://mattgolder.com/elections>
(Bormann & Golder, 2013)
(Data downloaded: 2016-10-17)

Democratic Electoral Systems Around the World 1946-2011 The data focus on national-level (lower house) legislative and presidential elections in democratic regimes. A regime is classified as a democracy at the time of an election if (i) the chief executive is elected, (ii) the legislature is elected, (iii) there is more than one party competing in elections, and (iv) an alternation under identical electoral rules has taken place. A regime is classified as a dictatorship at the time of an election if any of these four conditions do not hold (Przeworski et al., 2000; Cheibub, Gandhi and Vreeland, 2010).

Note: The original values of -99 (the information is missing but should theoretically be available) and -88 (there is no single value for this particular variable) have been recoded to . (missing).

4.43.1 gol_adm Average District Magnitude

Average district magnitude in an electoral tier. This is calculated as the total number of seats allocated in an electoral tier divided by the total number of districts in that tier.

Min. Year: 2013 Max. Year: 2013
N: 127

Min. Year: 1946 Max. Year: 2016
N: 133 n: 5317 \bar{N} : 75 \bar{T} : 40

4.43.2 gol_dist Districts

This is the number of electoral districts or constituencies in an electoral tier.

Min. Year: 2013 Max. Year: 2013
N: 128

Min. Year: 1946 Max. Year: 2016
N: 133 n: 5359 \bar{N} : 75 \bar{T} : 40

4.43.3 gol_enep Effective Number of Electoral Parties

Effective Number of Electoral Parties.

Min. Year:2010 Max. Year: 2013
N: 110

Min. Year:1946 Max. Year: 2016
N: 123 n: 4726 \bar{N} : 67 \bar{T} : 38

4.43.4 gol_enep1 Effective Number of Electoral Parties1

The effective number of electoral parties once the "other" category has been "corrected" by using the least component method of bounds.

Min. Year:2010 Max. Year: 2013
N: 110

Min. Year:1946 Max. Year: 2016
N: 123 n: 4671 \bar{N} : 66 \bar{T} : 38

4.43.5 gol_enepo Effective Number of Electoral Parties (Others)

The percentage of the vote going to parties that are collectively known as "others" in official election results.

Min. Year:2010 Max. Year: 2013
N: 109

Min. Year:1946 Max. Year: 2016
N: 123 n: 4649 \bar{N} : 65 \bar{T} : 38

4.43.6 gol_enpp Effective Number of Parliamentary or Legislative Parties

The effective number of parliamentary (legislative) parties.

Min. Year:2010 Max. Year: 2013
N: 123

Min. Year:1946 Max. Year: 2016
N: 129 n: 5238 \bar{N} : 74 \bar{T} : 41

4.43.7 gol_enpp1 Effective Number of Parliamentary or Legislative Parties1

This is the effective number of parliamentary (legislative) parties once the "other" category has been "corrected" by using the least component method of bounds.

Min. Year:2010 Max. Year: 2013
N: 121

Min. Year:1946 Max. Year: 2016
N: 128 n: 5115 \bar{N} : 72 \bar{T} : 40

4.43.8 gol_enppo Effective Number of Parliamentary or Legislative Parties (Others)

The percentage of seats won by parties that are collectively known as "others" in official election results.

Min. Year:2010 Max. Year: 2013
N: 121

Min. Year:1946 Max. Year: 2016
N: 128 n: 5115 \bar{N} : 72 \bar{T} : 40

4.43.9 gol_enpres Effective Number of Presidential Candidates

The effective number of presidential candidates.

Min. Year:2013 Max. Year: 2013
N: 69

Min. Year:1946 Max. Year: 2016
N: 70 n: 2555 \bar{N} : 36 \bar{T} : 37

4.43.10 gol_est Electoral System Type-3 classes

This is a categorical variable that takes on one of three values indicating the basic type of electoral system used in the elections.

1. Majoritarian
2. Proportional
3. Mixed

Min. Year:2013 Max. Year: 2013
N: 129

Min. Year:1946 Max. Year: 2016
N: 134 n: 5467 \bar{N} : 77 \bar{T} : 41

4.43.11 gol_est_spec Electoral System Type-11 classes

This is a categorical variable that provides a more detailed indication of the type of electoral system used in the election.

1. Single-Member-District-Plurality (SMDP)
2. Two-Round System (TRS)
3. Alternative Vote (AV)
4. Borda Count (BC)
5. Block Vote (BV)
6. Party Block Vote (PBV)
7. Limited Vote (LV)
8. Single Nontransferable Vote (SNTV)
9. List Proportional Representation (List PR)
10. Single Transferable Vote (STV)
11. Mixed Dependent (or Mixed Member Proportional)
12. Mixed Independent (or Mixed Parallel)

Min. Year: 2013 Max. Year: 2013
N: 129

Min. Year: 1946 Max. Year: 2016
N: 134 n: 5473 \bar{N} : 77 \bar{T} : 41

4.43.12 gol_inst Institution

This is a categorical variable indicating a country's regime type at the end of the given year. The data for this variable come from Cheibub, Gandhi and Vreeland (2010), which we updated through 2011.

0. Parliamentary democracy
1. Semi-presidential democracy
2. Presidential democracy
3. Civilian dictatorship
4. Military dictatorship
5. Royal dictatorship

Not all elections that occur when a regime is classified as a dictatorship (regime= 4-6) are dictatorial. This apparent anomaly has to do with the fact that a country's regime type is coded based on its status at the end of a given year. Elections like those in Argentina 1962, Nicaragua 1983, Philippines 1965, and Thailand 1976 all preceded a democratic collapse in the same year. Although these countries are considered dictatorial at the end of these years, we code these particular elections as democratic and therefore include them in our data set. We should note that we code the 1997 elections in Kenya, the 1999 elections in Guinea Bissau, the 2005 elections in Liberia, the 2006 elections in Mauritania, and the 2008 elections in Bangladesh as democratic even though Cheibub, Gandhi and Vreeland (2010) do not code these countries as democratic until the following year. The reason for this is that these elections are the primary reason cited by Cheibub, Gandhi and Vreeland (2010) for their eventual recoding of these countries as democratic. As an example, Cheibub, Gandhi and Vreeland (2010) do not code Liberia as democratic until 2006 despite the fact that presidential elections took place in October 2005, because the winner of these elections, Ellen Johnson-Sirleaf, did not officially take office until January 2006. The bottom line is that there are a few observations in our data set of democratic elections where regime indicates that the country was a dictatorship by the end of the year.

Min. Year:2013 Max. Year: 2013
N: 129

Min. Year:1946 Max. Year: 2016
N: 134 n: 5526 \bar{N} : 78 \bar{T} : 41

4.43.13 gol_mix Mixed Type

This is a categorical variable that indicates the precise type of mixed electoral system that is being used.

1. Coexistence
2. Superposition
3. Fusion
4. Correction
5. Conditional

Min. Year:2013 Max. Year: 2013
N: 31

Min. Year:1946 Max. Year: 2016
N: 33 n: 871 \bar{N} : 12 \bar{T} : 26

4.43.14 gol_mt Multi-Tier Type

This is a dichotomous variable that indicates whether different electoral tiers are linked (1) or not (0). Electoral tiers are linked if the unused votes from one electoral tier are used to allocate seats in another electoral tier, or if the allocation of seats in one electoral tier is conditional on the seats received in a different electoral tier.

Min. Year:2013 Max. Year: 2013
N: 129

Min. Year:1946 Max. Year: 2016
N: 134 n: 5489 \bar{N} : 77 \bar{T} : 41

4.43.15 gol_nos Number of Seats

This indicates the total number of seats in the lower house of the national legislature.

Min. Year:2013 Max. Year: 2013
N: 129

Min. Year:1946 Max. Year: 2016
N: 134 n: 5462 \bar{N} : 77 \bar{T} : 41

4.43.16 gol_pest Presidential Electoral System Type

This is a categorical variable that indicates the electoral formula used in the presidential election.

1. Plurality
2. Absolute Majority
3. Qualified Majority
4. Electoral College
5. Alternative Vote

Min. Year:2013 Max. Year: 2013
N: 68

Min. Year:1946 Max. Year: 2016
N: 69 n: 2533 \bar{N} : 36 \bar{T} : 37

4.43.17 gol_pr PR Type

This is a categorical variable that indicates the precise electoral formula used in an electoral tier.

1. Single-Member-District-Plurality (SMDP)
2. Two Round Majority-Plurality
3. Two Round Qualified Majority
4. Two Round Majority Runoff
5. Alternative Vote (AV)
6. Borda Count (BC)
7. Modified Borda Count (mBC)
8. Block Vote (BV)
9. Party Block Vote (PBV)
10. Limited Vote (LV)
11. Single Nontransferable Vote (SNTV)
12. Hare quota
13. Hare quota with largest remainders
14. Hare quota with highest average remainders
15. Hagenbach-Bischoff quota
16. Hagenbach-Bischoff quota with largest remainders
17. Hagenbach-Bischoff quota with highest average remainders
18. Droop quota
19. Droop quota with largest remainders
20. Droop quota with highest average remainders
21. Imperiali quota
22. Imperiali quota with largest remainders
23. Imperiali quota with highest average remainders
24. Reinforced Imperiali quota
25. D'Hondt
26. Sainte-Laguë
27. Modified Sainte-Laguë
28. Single Transferable Vote.

Note: a detailed description of the difference between types you can find in the original codebook.

4.43.20 gol_uptier Upper Tier

This indicates the percentage of all legislative seats allocated in electoral districts above the lowest electoral tier.

Min. Year:2013 Max. Year: 2013
N: 126

Min. Year:1946 Max. Year: 2016
N: 131 n: 5257 \bar{N} : 74 \bar{T} : 40

4.44 The Hertie School of Governance

<http://www.governancereport.org/home/governance-indicators/>

(The Hertie School of Governance, 2014) (The Hertie School of Governance, 2015) (The Hertie School of Governance, 2016)

(Data downloaded: 2016-10-21)

Governance Indicators The aim of Governance Indicators is to build a new generation of governance indicators that take seriously the multi-level and multi-actor nature of governance in a globalised world, that are grounded in conceptual models, and that stay close to the governance problématiques of our times. In doing so, we draw on many existing databases that contain relevant information and generate new indicators that complement these or shed light on other aspects of governance, e.g., coordination capacity within public administration, treaty ratification, etc. The information is presented in the form of dashboards tailored to the themes of each year’s Report that acknowledge the inherent multi-dimensionality of the broad phenomenon of governance and allow for analysis of myriad governance-related questions and theory-testing, across various levels of governance and actors.

The Administrative Capacity Dashboard prepared for The Governance Report 2014 consists of four sub-dashboards, i.e. one for each of the four capacities highlighted in the Report: delivery, regulatory, coordination, and analytical. It is composed of different types of data taken from different organisations and data providers, whenever possible, and includes raw indicators and some thematic indexes and sub-indexes that are based on weighted averages of the standardised values of the raw scores. The indicators presented here provide information that makes it possible to address empirically many questions about the possible relationship between institutional design, the functioning of bureaucracies, and governance output.

The governance indicators developed as a part of the Governance Report 2015 seek to help further understand the evolution of the economic and political issues currently faced in the EU. The indicators allow us to conduct a variety of analyses that help describe whether EU countries have been moving closer together or further apart in particular ways over the last 15 years. Furthermore, these indicators allow us to see whether convergence or divergence has been more pronounced within clusters of countries, or so-called ‘convergence clubs’, within the EU. In addition to these convergence indicators, we also provide indicators that measure associations between macroeconomic trends and aggregate public opinion. Such indicators permit exploration of, for example, whether negative economic outcomes entail declining trust in EU institutions by examining past associations between these outcomes. As in the case of our convergence indicators, we also allow disaggregation of these trends into specific groups of countries, as well as distinct time periods, to determine whether there are cases in which these challenges to governance are most acute.

Governance Report Indicators 2016 data cover 29 OECD member states and seven non-OECD countries. The data list the standardized mean scores (z-scores) of each indicator together with a lower and upper bound 95% credible interval estimate (an estimate of uncertainty around the mean), in other words, each indicator comes in three varieties. Authors considered infrastructure governance and its three dimensions to be latent concepts that cannot be measured directly. Each of our variables, therefore, is a realization of some underlying level of governance relating to one of the three dimensions, and this information can be used to estimate countries’ underlying levels of infrastructure governance. Specifically, authors generated our estimates of countries’ levels of infrastructure governance from a Bayesian factor analysis (BFA) model.

4.44.1 gov_igicm_l lower_Construction and Monitoring

Construction and Monitoring, standardized lower bound of the 95% credible interval around the mean. Construction and monitoring challenges [q17_1:8 | Hertie School-OECD Global Expert Survey on Public Infrastructure | 2015]

Min. Year: 2016 Max. Year: 2016

4.45 Gerring, Thacker & Moreno

<http://www.bu.edu/sthacker/research/articles-and-data/>
(Gerring & Thacker, 2008)
(Data downloaded: 2016-09-28)

Centripetal Democratic Governance Data used in the book *A Centripetal Theory of Democratic Governance* (Gerring, John and Thacker, Strom C,2008).

4.45.1 gtm_parl Parliamentarism

The parliamentary/presidential distinction is conceptualized as a continuum with two dimensions: (a) the degree of separation (independence) between president and parliament (unity = parliamentary, separation = presidential) and, if there is any separation at all, (b) the relative power of the two players (the more power the president possesses, the more presidential is the resulting system). This complex reality is captured with a three-part coding scheme:

0. Presidential
1. Semi-presidential
2. Parliamentary

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1946 Max. Year: 2002
N: 166 n: 4353 \bar{N} : 76 \bar{T} : 26

4.45.2 gtm_pr Proportional Representation

The centripetal theory of democratic governance emphasizes the following three features of an electoral system: (a) district magnitude (M), (b) seat allocation rules (majoritarian or proportional), and (c) candidate selection rules. The centripetal ideal type is defined by $M > 1$, proportional seat allocation rules, and party-controlled candidate selection. This is the closed-list-PR electoral system. Other systems are ranked lower in this coding according to their deviation from this ideal type. Thus, the coding for the list-PR variable is as follows:

0. Majoritarian or Preferential-vote
1. Mixed-member majority or Block vote.
2. Closed-list-PR

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1946 Max. Year: 2002
N: 167 n: 4356 \bar{N} : 76 \bar{T} : 26

4.45.3 gtm_unit Unitarism

Average of Nonfederalism and Nonbicameralism: Nonfederalism is coded as 0 = federal (elective regional legislatures plus conditional recognition of subnational authority), 1 = semifederal (where there are elective legislatures at the regional level but in which constitutional sovereignty is reserved to the national government), or 2 = non-federal. Nonbicameralism is coded as 0 = strong bicameral (upper house has some effective veto power; the two houses are incongruent), 1 = weak bicameral (upper house has some effective veto power, though not necessarily a formal veto; the two houses are congruent), or 2 = unicameral (no upper house or weak upper house).

(Data downloaded: 2015-10-02)

Autocratic Regime Data When the leader of an autocratic regime loses power, one of three things happens. The incumbent leadership group is replaced by democratically elected leaders. Someone from the incumbent leadership group replaces him, and the regime persists. Or the incumbent leadership group loses control to a different group that replaces it with a new autocracy. The data set that facilitates the investigation of all three kinds of transition. The data identify how regimes exit power, how much violence occurs during transitions, and whether the regimes that precede and succeed them are autocratic. The data identify autocratic regime breakdowns regardless of whether the country democratizes, which makes possible the investigation of why the ouster of dictators sometimes leads to democracy but often does not, and many other questions.

4.46.1 gwf_duration Duration of Autocratic Regime

Time-varying duration of autocratic regime up to time t.

Min. Year:2010 Max. Year: 2010
N: 58

Min. Year:1946 Max. Year: 2010
N: 122 n: 4499 \bar{N} : 69 \bar{T} : 37

4.46.2 gwf_fail Regime Failure

Binary indicator of autocratic regime failure.

Min. Year:2010 Max. Year: 2010
N: 58

Min. Year:1946 Max. Year: 2010
N: 122 n: 4499 \bar{N} : 69 \bar{T} : 37

4.46.3 gwf_failsub Regime Failure - Subsequent Regime Type

Categorical variable marking the subsequent regime type:

0. No regime failure at duration time t and regime still in power December 31, 2010
1. Subsequent regime is democracy
2. Subsequent regime is autocratic
3. Subsequent regime is warlord, foreign-occupied or ceases to exist

Min. Year:2010 Max. Year: 2010
N: 58

Min. Year:1946 Max. Year: 2010
N: 122 n: 4499 \bar{N} : 69 \bar{T} : 37

4.46.4 gwf_failtype Regime Failure - Ending Type

Categorical variable marking how the autocratic regime ends:

0. Regime still in power on December 31, 2010

1. Regime insiders change rules of regime
2. Incumbent loses elections
3. No incumbent runs in competitive election won by opponent
4. Popular uprising
5. Military coup
6. Insurgents, revolutionaries, or combatants fighting a civil war
7. Foreign imposition or invasion
8. New autocratic leader selected, changes rules, and remains in power
9. State ceases to exist ends or government fails to control most of the country's territory

Min. Year:2010 Max. Year: 2010
N: 58

Min. Year:1946 Max. Year: 2010
N: 122 n: 4499 \bar{N} : 69 \bar{T} : 37

4.46.5 gwf_failviolent Regime Failure - Level of Violence

Categorical variable marking the level of violence during the autocratic regime failure event:

- 0: Regime still in power on December 31, 2010
1. No deaths
2. 1-25 deaths
3. 26-1000 deaths
4. >1000

Min. Year:2010 Max. Year: 2010
N: 58

Min. Year:1946 Max. Year: 2010
N: 122 n: 4499 \bar{N} : 69 \bar{T} : 37

4.46.6 gwf_regimetype Regime Type

Autocratic regime type:

1. Monarchy
2. Personal
3. Military
4. Party
5. Party-Personal
6. Party-Military
7. Military-Personal
8. Party-Personal-Military
9. Oligarchy
10. Indirect Military

Min. Year:2010 Max. Year: 2010

4.47 Henisz

<https://mgmt.wharton.upenn.edu/profile/1327>
(Henisz, 2002)
(Data downloaded: 2016-09-28)

The Political Constraints Data Measures political risk focusing on political constraints.

4.47.1 h_align1 Alignment Executive/Legislative Chamber (lower)

Dummy variable indicating alignment between the executive and the lower legislative chamber, coded 1 when the party controlling the executive branch is either the largest party in the lower legislative chamber or is a member of a ruling coalition in that chamber.

Min. Year:2010 Max. Year: 2012
N: 153

Min. Year:1946 Max. Year: 2012
N: 181 n: 6220 \bar{N} : 93 \bar{T} : 34

4.47.2 h_align112 Alignment Lower/Upper Legislative Chamber

Dummy variable indicating alignment between the legislative chambers, coded 1 when the same party or a coalition of parties (when available) control a majority in both legislative chambers.

Min. Year:2010 Max. Year: 2012
N: 34

Min. Year:1946 Max. Year: 2012
N: 60 n: 1638 \bar{N} : 24 \bar{T} : 27

4.47.3 h_align2 Alignment Executive/Legislative Chamber (upper)

Dummy variable indicating alignment between the executive and the upper legislative chamber, coded 1 when the party controlling the executive branch is either the largest party in the upper legislative chamber or is a member of a ruling coalition in that chamber.

Min. Year:2010 Max. Year: 2012
N: 34

Min. Year:1946 Max. Year: 2012
N: 61 n: 1649 \bar{N} : 25 \bar{T} : 27

4.47.4 h_f Independent Sub-Federal Unit

Dummy variable coded 1 if there are independent sub-federal units (states, provinces, regions etc.) that impose substantive constraints on national fiscal policy.

Min. Year:2012 Max. Year: 2012
N: 183

Min. Year:1946 Max. Year: 2012
N: 199 n: 8432 \bar{N} : 126 \bar{T} : 42

4.47.5 h_j Independent Judiciary

Dummy variable coded 1 if there is an independent judiciary (based on information from Polity's Executive Constraints, p_xconst) and - where available - on ICRG's index of Law & Order).

Min. Year:2012 Max. Year: 2012
N: 164

Min. Year:1946 Max. Year: 2012
N: 185 n: 7763 \bar{N} : 116 \bar{T} : 42

4.47.6 h_l1 Legislative Chamber

Dummy variable coded 1 if there is an effective legislative chamber (based on information from Polity's Executive Constraints, p_xconst).

Min. Year:2012 Max. Year: 2012
N: 184

Min. Year:1946 Max. Year: 2012
N: 201 n: 9546 \bar{N} : 142 \bar{T} : 47

4.47.7 h_l2 2nd Legislative Chamber

Dummy variable coded 1 if there is an effective second legislative chamber, namely, where h_l1=1 and records on the composition of a second chamber exist - where that chamber is elected under a distinct electoral system and has a substantive (not merely delaying) role in the implementation of fiscal policy.

Min. Year:2012 Max. Year: 2012
N: 183

Min. Year:1946 Max. Year: 2012
N: 199 n: 9488 \bar{N} : 142 \bar{T} : 48

4.47.8 h_lflo Legislative Fractionalization (lower)

Legislative fractionalization is approximately the probability that two random draws from the lower legislative chamber will be from different parties.

Min. Year:2010 Max. Year: 2012
N: 167

Min. Year:1946 Max. Year: 2012
N: 195 n: 7498 \bar{N} : 112 \bar{T} : 38

4.47.9 h_lfup Legislative Fractionalization (upper)

Legislative fractionalization is approximately the probability that two random draws from the upper legislative chamber will be from different parties.

Min. Year:2010 Max. Year: 2012
N: 34

Min. Year:1946 Max. Year: 2012
N: 68 n: 1836 \bar{N} : 27 \bar{T} : 27

4.47.10 h_polcon3 Political Constraints Index III

This index measures the feasibility of policy change, i.e. the extent to which a change in the preferences of any one political actor may lead to a change in government policy. The index is composed from the following information: the number of independent branches of government with veto power over policy change, counting the executive and the presence of an effective lower and upper house in the legislature (more branches leading to more constraint); the extent of party alignment across branches of government, measured as the extent to which the same party or coalition of parties control each branch (decreasing the level of constraint); and the extent of preference heterogeneity within each legislative branch, measured as legislative fractionalization in the relevant house (increasing constraint for aligned executives, decreasing it for opposed executives). The index scores are derived from a simple spatial model and theoretically ranges from 0 to 1, with higher scores indicating more political constraint and thus less feasibility of policy change. Note that the coding reflects information as of January 1 in any given year. Henisz (2002) uses this index to demonstrate that political environments that limit the feasibility of policy change are an important determinant of investment in infrastructure.

Min. Year:2012 Max. Year: 2012
N: 184

Min. Year:1946 Max. Year: 2012
N: 201 n: 9382 \bar{N} : 140 \bar{T} : 47

4.47.11 h_polcon5 Political Constraints Index V

This index follows the same logic as Political Constraints Index III (h_polcon3) but also includes two additional veto points: the judiciary and sub-federal entities. Note that the coding reflects information as of January 1 in any given year. Henisz (2000) uses this index to measure the impact on cross-national growth rates of a government's ability to provide credible commitment.

Min. Year:2012 Max. Year: 2012
N: 165

Min. Year:1960 Max. Year: 2012
N: 191 n: 7888 \bar{N} : 149 \bar{T} : 41

4.48 Heritage Foundation

<http://www.heritage.org/index/explore>
(Foundation, 2015)
(Data downloaded: 2016-09-16)

Index of Economic Freedom The Index of Economic Freedom covers 10 freedoms - from property rights to entrepreneurship - in 186 countries.

Note: For the 2015 , most data covers the second half of 2013 through the first half of 2014. To the extent possible, the information considered for each factor was current as of June 30, 2014. It is important to understand that some factors are based on historical information. For example, the monetary policy factor is a 3-year weighted average rate of inflation from January 1, 2011, to December 31, 2013.

4.48.1 hf_business Business Freedom

The business freedom score encompasses 10 components, all weighted equally, based on objective data from the World Bank's Doing Business study (in 2005-2006; previously other data sources were being used):

- Starting a business - procedures (number)
- Starting a business - time (days)
- Starting a business - cost (% of income per capita)
- Starting a business - minimum capital (% of income per capita)
- Obtaining a license - procedures (number)
- Obtaining a license - time (days)
- Obtaining a license - cost (% of income per capita)
- Closing a business - time (years)
- Closing a business - cost (% of estate)
- Closing a business - recovery rate (cents on the dollar)

Each of these raw components is converted into a scale graded from 0 to 100, where 100 represents the maximum degree of business freedom.

Min. Year:2013 Max. Year: 2014
N: 182

Min. Year:1995 Max. Year: 2016
N: 183 n: 3529 \bar{N} : 160 \bar{T} : 19

4.48.2 hf_corrupt Freedom from Corruption

This factor relies on Transparency International's Corruption Perceptions Index (CPI), which measures the level of corruption in 152 countries, to determine the freedom from corruption scores of countries that are also listed in the Index of Economic Freedom. The CPI is based on a 10-point scale in which a score of 10 indicates very little corruption and a score of 0 indicates a very corrupt government. In scoring freedom from corruption, the authors convert each of these raw CPI data to a 0-100 scale by multiplying the CPI scores by 10.

Min. Year:2013 Max. Year: 2014
N: 182

Min. Year:1995 Max. Year: 2016
N: 183 n: 3533 \bar{N} : 161 \bar{T} : 19

4.48.3 hf_efscore Economic Freedom Index

The Economic Freedom index uses 10 specific freedoms, some as composites of even further detailed and quantifiable components:

- Business freedom (hf_business)
- Trade freedom (hf_trade)
- Fiscal freedom (hf_fiscal)
- Freedom from government (hf_govt)
- Monetary freedom (hf_monetary)
- Investment freedom (hf_invest)
- Financial freedom (hf_financ)
- Property rights (hf_prights)
- Freedom from corruption (hf_corrupt)
- Labor freedom (hf_labor).

Each of these freedoms is weighted equally and turned into an index ranging from 0 to 100, where 100 represents the maximum economic freedom. Although changes in methodology have been undertaken throughout the measurement period, continuous backtracking has been used to maximize comparability over time.

Min. Year:2012 Max. Year: 2014
N: 178

Min. Year:1995 Max. Year: 2016
N: 180 n: 3508 \bar{N} : 159 \bar{T} : 19

4.48.4 hf_financ Financial Freedom

The financial freedom factor measures the relative openness of each country's banking and financial system by determining: the extent of government regulation of financial services; the extent of state intervention in banks and other financial services; the difficulty of opening and operating financial services firms (for both domestic and foreign individuals); and government influence on the allocation of credit. The country's financial climate is measured as an overall score between 0 and 100, where 100 represent the maximum degree of financial freedom.

Min. Year:2013 Max. Year: 2014
N: 179

Min. Year:1995 Max. Year: 2016
N: 181 n: 3519 \bar{N} : 160 \bar{T} : 19

4.48.5 hf_fiscal Fiscal Freedom

Fiscal freedom is composed of three quantitative components in equal measure: The top tax rate on individual income, The top tax rate on corporate income, Total tax revenue as a percentage of GDP. In scoring the fiscal freedom factor, each of these numerical variables is weighted equally as one-third of the factor. This equal weighting allows a country to achieve a score as high as 67 percent based on two of the components even if it receives a score of 0 percent on the third. The country's fiscal freedom ranges between 0 and 100, where 100 represent the maximum degree of fiscal freedom.

Min. Year:2013 Max. Year: 2014
N: 181

Min. Year:1995 Max. Year: 2016
N: 182 n: 3519 \bar{N} : 160 \bar{T} : 19

4.48.6 hf_govt Freedom from Government

Scoring of the freedom from government factor is based on two components: Government expenditure as a percentage of GDP, Revenues generated by state-owned enterprises (SOEs) and property as a percentage of total government revenue. Government expenditure as a percentage of GDP is weighted as two-thirds of the freedom from government factor score, and revenue from SOEs is weighted as one-third. In cases where SOE data does not exist, the data is excluded from the factor score. The country's freedom from government ranges between 0 and 100, where 100 represents the maximum degree of freedom from government.

Min. Year:2012 Max. Year: 2014
N: 181

Min. Year:1995 Max. Year: 2016
N: 182 n: 3522 \bar{N} : 160 \bar{T} : 19

4.48.7 hf_invest Investment Freedom

This factor scrutinizes each country's policies toward foreign investment, as well as its policies toward capital flows internally, in order to determine its overall investment climate. The country's investment freedom ranges between 0 and 100, where 100 represent the maximum degree of investment freedom.

Min. Year:2013 Max. Year: 2014
N: 181

Min. Year:1995 Max. Year: 2016
N: 183 n: 3527 \bar{N} : 160 \bar{T} : 19

4.48.8 hf_labor Labor Freedom

The new labor freedom factor is a quantitative factor based on objective data from the World Bank's Doing Business study. It provides reliable cross-country data on regulations concerning minimum wages, laws inhibiting layoffs, severance requirements, and measurable regulatory burdens on hiring, hours, and so on. Specifically, four quantitative components are equally weighted as 25 percent of the labor freedom factor: Minimum wage, Rigidity of hours, Difficulty of firing redundant employees, Cost of firing redundant employees. The country's labor freedom score ranges from 0 to 100, where 100 represent the maximum degree of labor freedom.

Min. Year:2013 Max. Year: 2014
N: 181

Min. Year:2005 Max. Year: 2016
N: 181 n: 2052 \bar{N} : 171 \bar{T} : 11

4.48.9 hf_monetary Monetary Freedom

The score for the monetary freedom factor is based on two components: The weighted average inflation rate for the three most recent years, Price controls. The weighted average inflation (WAI) rate for the three most recent years serves as the primary input into an equation that generates the base score for monetary freedom (MF). The extent of price controls is then assessed as a penalty of up to 20 percent subtracted from the base score. The country's monetary freedom ranges between 0 and 100, where 100 represents the maximum degree of monetary freedom.

Min. Year:2013 Max. Year: 2014
N: 181

Min. Year:1995 Max. Year: 2016
N: 182 n: 3525 \bar{N} : 160 \bar{T} : 19

4.48.10 hf_prights Property Rights

This factor scores the degree to which a country's laws protect private property rights and the degree to which its government enforces those laws. It also accounts for the possibility that private property will be expropriated. In addition, it analyzes the independence of the judiciary, the existence of corruption within the judiciary, and the ability of individuals and businesses to enforce contracts. The less certain the legal protection of property is and the greater the chances of government expropriation of property are, the higher a country's score is. The country's property rights score ranges from 0 and 100, where 100 represents the maximum degree of protection of property rights.

Min. Year:2013 Max. Year: 2014
N: 178

Min. Year:1995 Max. Year: 2016
N: 180 n: 3517 \bar{N} : 160 \bar{T} : 20

4.48.11 hf_trade Trade Freedom

The trade freedom score is based on two inputs: The trade-weighted average tariff rate, Non-tariff barriers (NTBs). Weighted average tariffs is a purely quantitative measure and accounts for the basic calculation of the score. The presence of NTBs in a country affects its trade freedom score by incurring a penalty of up to 20 percentage points, or one-fifth of the maximum score. The country's trade freedom ranges between 0 and 100, where 100 represents the maximum degree of trade freedom.

Min. Year:2013 Max. Year: 2014

4.49 Hollyer, Rosendorff & Vreeland

<http://hrvtransparency.org/>
(Hollyer et al., 2014)
(Data downloaded: 2016-09-29)

HRV Transparency Project The HRV Transparency project examines the causes and consequences of government transparency both through theoretical and empirical approaches. At the center of our efforts is the formation of a credible measure of government transparency which we term the HRV Index. Creating such a measure has previously been a formidable task as transparency is an inherently broad concept, allowing room for subjective judgment and vague definitions to influence measures. By contrast, our measure relies on a precise and narrow conception of transparency: the disclosure of policy-relevant information by the government to the public. In addition, our measure reflects an objective view of transparency that is readily reproducible by others. The HRV Index focuses on the availability of credible aggregate economic data. It does so by examining patterns of missing data and treating transparency as the latent term which best reflects the tendency to disclose. (For a full discussion of our methodology, see the following.) Our measure provides observations for 125 countries from 1980-2010 and can be used to measure relationships between transparency and other issues such as democracy, accountability, or political instability. Transparency encompasses many dimensions. The HRV index measures a specific aspect of government transparency: reporting national data to international organizations. Rather than rely on expert but subjective judgments, our measure is based on objective criteria. In our early work, we considered the percentage of economic data reported by governments to the World Bank. This approach assumes that all economic measures should be equally weighed. Yet, some aspects of the economy may be more difficult to measure, and reporting some measures may truly distinguish a country as exceptionally transparent about its economy. We thus use "Item Response Theory," a highly sophisticated and computationally intense method to estimate transparency. This method assigns different weights for reporting distinct measures of the economy, based on how many other countries actually reported data on the measure, and how much a country distinguishes itself from other countries by reporting data on a given measure. (Technically, the model estimates "difficulty" and "discrimination" parameters for each economic variable.)

Our model analyzes 240 measures of the economy consistently collected by the World Bank's World Development Indicators. Since the World Bank obtains its data from other international agencies that, in turn, obtain their data from national statistical offices, our measure is a valid indicator of governments' efforts to collect and disseminate economically relevant information. Moreover, because the World Bank omits data considered "questionable," our index reflects the collection and dissemination of generally credible information about a country's national economy. The index covers 125 countries from 1980 to 2010. Why do some governments report more economic data than others? To disseminate data requires both state capacity and political will - neither by itself is sufficient to ensure high levels of disclosure. Consistent with this assertion, we find that poor countries are less transparent; they provide, on average, less economic data than rich countries. Importantly, however, we also find that amongst more developed countries, democratic countries are more likely to report data than autocracies. In fact, for every level of per capita income, we observe that democracies are more likely to report data than autocracies. The differences are small amongst the poorest countries, but for countries with per capita income above dollar2000, the differences become stark. As countries develop economically, their capacity to report data increases, but not necessarily their willingness. Since capacity and willingness are both necessary to report data, our measure of transparency corresponds jointly to levels of development and democracy.

Moreover, our estimation procedure reveals that reporting politically relevant data really distinguishes the most transparent countries. From among all the economic measures we consider, the most discriminating items overwhelmingly relate to trade and investment. Among the least discriminating items are population measures. We conclude that our index reflects more than technocratic capacity and is driven more by the willingness to disclose politically relevant data. As an additional advantage of our measure, we report not only point estimates for each country by year, but also the upper and lower bounds for each country-year estimate (with 95% confidence), along with the standard deviations. We further provide change in transparency along with its associated upper and lower bounds. To our knowledge, we are the first to provide a transparency index with reported levels of uncertainty.

4.49.1 hrv_index HRV Index

The point estimate of the HRV index.

4.50 Hadenius & Teorell

<https://sites.google.com/site/authoritarianregimedataset/data>
(Wahman et al., 2013) (Hadenius & Teorell, 2007)
(Data downloaded: 2016-09-29)

The Authoritarian Regime Dataset The Authoritarian Regimes Dataset is a comprehensive dataset on authoritarian regimes in the world between 1972-2010. The dataset enables researchers and practitioners to distinguish between different authoritarian regime types, follow global trends in authoritarianism and study the specific institutional trajectories of a particular country or set of countries.

4.50.1 ht_colonial Colonial Origin

This is a tenfold classification of the former colonial ruler of the country. Following Bernard et al (2004), we have excluded the British settler colonies (the US, Canada, Australia, Israel and New Zealand), and exclusively focused on "Western overseas" colonialism. This implies that only Western colonizers (e.g. excluding Japanese colonialism), and only countries located in the non-Western hemisphere "overseas" (e.g. excluding Ireland & Malta), have been coded. Each country that has been colonized since 1700 is coded. In cases of several colonial powers, the last one is counted, if it lasted for 10 years or longer. The categories are the following:

0. Never colonized by a Western overseas colonial power
1. Dutch
2. Spanish
3. Italian
4. US
5. British
6. French
7. Portuguese
8. Belgian
9. British-French
10. Australian.

Min. Year:2013 Max. Year: 2013
N: 194

Min. Year:1946 Max. Year: 2016
N: 211 n: 10791 \bar{N} : 152 \bar{T} : 51

4.50.2 ht_partsz Size of Largest Party in Legislature (in Fractions)

Counts the largest parties' number of seats divided by the legislative assemblies' total number of seats expressed in fractions. In countries with a two-chamber parliament the lower house is counted.

Min. Year:2010 Max. Year: 2010
N: 80

Min. Year:1972 Max. Year: 2010
N: 196 n: 6420 \bar{N} : 165 \bar{T} : 33

4.50.3 ht_region The Region of the Country

This is a tenfold politico-geographic classification of world regions, based on a mixture of two considerations: geographical proximity (with the partial exception of category 5 below) and demarcation by area specialists having contributed to a regional understanding of democratization. The categories are as follow:

1. Eastern Europe and post Soviet Union (including Central Asia)
2. Latin America (including Cuba, Haiti & the Dominican Republic)
3. North Africa & the Middle East (including Israel, Turkey & Cyprus)
4. Sub-Saharan Africa
5. Western Europe and North America (including Australia & New Zealand)
6. East Asia (including Japan & Mongolia)
7. South-East Asia
8. South Asia
9. The Pacific (excluding Australia & New Zealand)
10. The Caribbean (including Belize, Guyana & Suriname, but excluding Cuba, Haiti & the Dominican Republic)

Min. Year:2013 Max. Year: 2013
N: 194

Min. Year:1946 Max. Year: 2016
N: 211 n: 10791 \bar{N} : 152 \bar{T} : 51

4.50.4 ht_regtype Regime Type

This typology of authoritarian regimes is based on a distinction between three modes of political power maintenance (probably the three most widely used throughout history): hereditary succession (lineage), corresponding to monarchies; the actual or threatened use of military force, corresponding to military regimes; and popular elections, designating electoral regimes. Among the latter we distinguish among no-party regimes (where all parties are prohibited), one-party regimes (where all but one party is prohibited), and limited multiparty regimes (where multiple parties are allowed but the system still does not pass as democratic); a subtype of these regimes where no parties are present,

although not being prohibited, are coded as "partyless" regimes. A subtype of military regimes are coded "rebel regimes", where a rebel movement has taken power by military means. We also code hybrids (or amalgams) combining elements from more than one regime type, as well as several minor types of regimes: "theocracies", "transitional" regimes, "civil war", foreign "occupation", and a residual "other" category. Using the mean of the Freedom House and Polity scales (fh_ipolity2), the line between democracies and autocracies is drawn at 7.5. This threshold value was chosen by estimating the mean cutoff point separating democracy from autocracy in five well-known categorical measures of democracy: those of Przeworski et al. (2000), Mainwaring et al. (2001), and Reich (2002), together with Freedom House's and Polity's own categorical thresholds for democracy.

1. Limited Multiparty
2. Partyless
3. No-Party
4. Military
5. Military No-Party
6. Military Multiparty
7. Military One-party
8. One-Party
9. Other
16. One-Party Monarchy
17. Monarchy
18. Rebel Regime
19. Civil War
20. Occupation
21. Theocracy
22. Transitional Regime
23. No-Party Monarchy
24. Multiparty Monarchy
100. Democracy

Min. Year:2010 Max. Year: 2010
N: 185

Min. Year:1972 Max. Year: 2010
N: 196 n: 6624 \bar{N} : 170 \bar{T} : 34

4.50.5 ht_regtype1 Regime Type (simplified)

A simplified, collapsed version of ht_regtype, where all monarchical regimes with amalgams [ht_regtype =16, 17, 23 or 24] are treated as monarchies, all military regimes with sub-types and amalgams [ht_regtype=4, 5, 6, 7 or 18] are treated as military regimes, and multiparty regimes with sub-types are treated as multiparty regimes [ht_regtype=1 or 2]. Only pure noparty [ht_regtype=3] and one-party [ht_regtype=8] regimes are treated as no-party and one-party regimes, respectively. The minor types [ht_regtype=9, 19, 20, 21, 22 or 25] are treated as other.

1. Monarchy
2. Military
3. One party
4. Multi-party
9. No-party
99. Other
100. Democracy

Min. Year:2010 Max. Year: 2010
N: 185

Min. Year:1972 Max. Year: 2010
N: 196 n: 6624 \bar{N} : 170 \bar{T} : 34

4.51 Institutions and Elections Project

<https://hvardhegre.net/iaep/>
(Wig et al., 2015)
(Data downloaded: 2016-09-30)

Institutions and Elections Project Data Institutions and Elections Project Data (version 2.0). The objective of the data from the Institutions and Elections Project (IAEP) is to describe the formal institutions that are in place, even if practice does not comport with those formal rules. The data refers to the situation January 1st each year. Note: According to the documentation of the data many of the cases "have more than one executive; [...] the executive referred to may be any one of the executives established in a country." We urge users to refer to the documentation at the IAEP web site for information about which executive each particular case refers to.

Note: Changes from the original version: The dataset has two types of missing values, logical missing values and actual missing values. In QoG data logical missing values were recoded to actual missing values. To access data with logical missing values please use original dataset.

4.51.1 iaep_ae Appointment of Executive

Is there an executive appointed either by a PM (that is, an executive who is also a member of the legislature) or a president (an independently selected executive)?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 160

Min. Year:1960 Max. Year: 2012
N: 176 n: 7319 \bar{N} : 138 \bar{T} : 42

4.51.2 iaep_aecc Appointments/Elections to Constitutional Court

Are members of this court (see iaep_cc) appointed or elected? "Elected" here refers to a popular election. Elections by legislative bodies are considered appointments.

- 1. Appointed
- 2. Elected

Min. Year:2010 Max. Year: 2012
N: 140

Min. Year:1960 Max. Year: 2012
N: 157 n: 4826 \bar{N} : 91 \bar{T} : 31

4.51.3 iaep_alcc Appointment for Life to Constitutional Court

Are members of the court are appointed for life?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 135

Min. Year:1960 Max. Year: 2012
N: 150 n: 4321 \bar{N} : 82 \bar{T} : 29

4.51.4 iaep_arr Appointment of Regional Representatives

This variable examine the relationship between the central and regional governments, those which are immediately below the central government. We focus exclusively on states or provincial levels of government, municipalities are not coded. In practice, do regions or provinces:

- 1. Appoint, elect or otherwise choose their own representatives autonomous from decisions by the central government
- 2. Have their administrators appointed by the central government
- 3. No regional/provincial governments

Min. Year:2010 Max. Year: 2012
N: 157

Min. Year:1960 Max. Year: 2012
N: 176 n: 7041 \bar{N} : 133 \bar{T} : 40

4.51.5 iaep_basp Banning of Anti-System Parties

Does an anti-system platform determine the banning of parties?

- 0. No
- 1. Yes

Min. Year:2011 Max. Year: 2012
N: 162

Min. Year:1960 Max. Year: 2012
N: 176 n: 6970 \bar{N} : 132 \bar{T} : 40

4.51.6 iaep_bp Banned Parties

Are there banned parties?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 157

Min. Year:1960 Max. Year: 2012
N: 175 n: 7183 \bar{N} : 136 \bar{T} : 41

4.51.7 iaep_callo Some other executive have the power to call elections

Does some other executive have the power to call elections?

- 0. No
- 1. Yes

Min. Year:2011 Max. Year: 2012
N: 162

Min. Year:1960 Max. Year: 2012
N: 176 n: 7439 \bar{N} : 140 \bar{T} : 42

4.51.8 iaep_cc Constitutional Court

According to the constitution, does the country have a national constitutional court? In some cases, a council with the powers of a constitutional court may exist, though it may not be part of the formal judiciary. In such cases, this non-judicial council with the powers of a constitutional court is coded as the constitutional court.

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 162

Min. Year:1960 Max. Year: 2012
N: 176 n: 7033 \bar{N} : 133 \bar{T} : 40

4.51.9 iaep_ccrea Constitutional Court Rules on Executive Actions

Can the court can rule on executive actions?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 137

Min. Year:1960 Max. Year: 2012
N: 152 n: 4596 \bar{N} : 87 \bar{T} : 30

4.51.10 iaep_ccrla Constitutional Court Rules on Legislative Actions

Can the court can rule on legislative actions?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 138

Min. Year:1960 Max. Year: 2012
N: 154 n: 4620 \bar{N} : 87 \bar{T} : 30

4.51.11 iaep_const The Age of the Constitution (years)

How long has the current constitution existed (years since the constitution was established)?

Min. Year:2011 Max. Year: 2012
N: 159

Min. Year:1960 Max. Year: 2012
N: 174 n: 6840 \bar{N} : 129 \bar{T} : 39

4.51.12 iaep_constin The Time the Constitution has been in Effect (years)

How long has the current constitution been in effect (years counting ineffect== 1)?

Min. Year:2011 Max. Year: 2012
N: 161

Min. Year:1960 Max. Year: 2012
N: 176 n: 7102 \bar{N} : 134 \bar{T} : 40

4.51.13 iaep_constlam The Time since the Last Amendment of Constitution (years)

How many years since the last amendment (years since amyear== 1)?

Min. Year:2011 Max. Year: 2012
N: 158

Min. Year:1960 Max. Year: 2012
N: 175 n: 6747 \bar{N} : 127 \bar{T} : 39

4.51.14 iaep_ebbp Ethnicity Based Banning of Parties

Does ethnic makeup determine the banning of parties?

- 0. No
- 1. Yes

Min. Year:2011 Max. Year: 2012
N: 162

Min. Year:1960 Max. Year: 2012
N: 176 n: 6970 \bar{N} : 132 \bar{T} : 40

4.51.15 iaep_eccdt Executive Can Change Domestic Taxes

Can an executive change domestic taxes (excluding import/export tariffs) without legislative approval?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 157

Min. Year:1960 Max. Year: 2012
N: 176 n: 6342 \bar{N} : 120 \bar{T} : 36

4.51.16 iaep_ecdl Executive Can Dissolve Legislature

According to the constitution, can an executive dissolve the legislature?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 160

Min. Year:1960 Max. Year: 2012
N: 176 n: 6551 \bar{N} : 124 \bar{T} : 37

4.51.17 iaep_ee Election of the Executive

Is the executive elected by:

1. Directly elected by public vote
2. Elected through legislative action by members of the legislature
3. Chosen through party process strictly by a party
4. Indirect public vote
5. Appointed

Min. Year:2010 Max. Year: 2012
N: 137

Min. Year:1960 Max. Year: 2012
N: 153 n: 5469 \bar{N} : 103 \bar{T} : 36

4.51.18 iaep_eml Executive is Member of Legislature

Is there an executive who is also a member of the legislature (like a prime minister, for example)? We consider membership in the legislature if either an explicit rule exists which requires an executive to maintain a seat in the legislature, or if practice and/or convention determines membership.

0. No
1. Yes

Min. Year:2010 Max. Year: 2012
N: 161

Min. Year:1960 Max. Year: 2012
N: 174 n: 6455 \bar{N} : 122 \bar{T} : 37

4.51.19 iaep_enlc Executive Nomination of Legislature Candidates

Does executive nomination establish how the field of candidates who stand for legislative elections is determined?

0. No
1. Yes

Min. Year:2011 Max. Year: 2012
N: 157

Min. Year:1960 Max. Year: 2012
N: 174 n: 6441 \bar{N} : 122 \bar{T} : 37

4.51.20 iaep_epmf Executive Power over Military Force

Does an executive have the power to use military force abroad without legislative approval?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 152

Min. Year:1960 Max. Year: 2012
N: 175 n: 6399 \bar{N} : 121 \bar{T} : 37

4.51.21 iaep_es Electoral System

What is the type of electoral system for legislative elections?

- 1. Plurality (First past the post)
- 2. Majority
- 3. Proportional representation
- 4. Mixed systems (combination of PR and either plurality or majority). This option includes situations in which a single chamber contains seats selected by different methods, or situations in which all of the seats in a chamber are chosen with the same method, but each chamber is selected through different methods.

Min. Year:2010 Max. Year: 2012
N: 153

Min. Year:1960 Max. Year: 2012
N: 170 n: 5990 \bar{N} : 113 \bar{T} : 35

4.51.22 iaep_ese Electoral System for the Executive

Election rules governing the determination of electoral outcomes for the executive: we record data on the electoral requirements for winning executive elections, specifically, the sorts of vote thresholds required for winners. If the executive is appointed or otherwise comes to power via non-electoral processes, we code this as missing.

- 1. Majority rule (50% + 1) Where run-offs are held, "majority rule" is selected, as the intention of a run-off election is to have one candidate receive a majority of the votes.
- 2. Plurality
- 3. No official, explicit, rule governing the outcome
- 4. Party leader of majority party/coalition in legislature automatically selected without additional process

Min. Year:2010 Max. Year: 2012
N: 99

Min. Year:1960 Max. Year: 2012
N: 111 n: 3129 \bar{N} : 59 \bar{T} : 28

4.51.23 iaep_evp Executive Veto Power

Does an executive have constitutional veto power over laws passed by the legislature?

- 0. No
- 1. Yes

Min. Year:2011 Max. Year: 2012
N: 161

Min. Year:1960 Max. Year: 2012
N: 176 n: 6569 \bar{N} : 124 \bar{T} : 37

4.51.24 iaep_ise Independence of Selection of Executive

Is there an executive chosen independently of the legislature (like a president, for example)? If these processes that select the executive is distinct from that which selects the legislature, then we consider the two to be independent. The selection processes, moreover, can involve different - albeit competing or complimentary - forms of selection.

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 160

Min. Year:1960 Max. Year: 2012
N: 176 n: 6917 \bar{N} : 131 \bar{T} : 39

4.51.25 iaep_lap Legislature Approves Budget

Does an executive have to secure legislative approval for the budget?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 161

Min. Year:1960 Max. Year: 2012
N: 175 n: 6551 \bar{N} : 124 \bar{T} : 37

4.51.26 iaep_lcre Legislature Can Remove Executive

According to the constitution, can the legislature remove an executive from office?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 159

Min. Year:1960 Max. Year: 2012
N: 176 n: 6596 \bar{N} : 124 \bar{T} : 37

4.51.27 iaep_lego Some other executive have the power to introduce legislation

Does some other executive have the power to introduce legislation in the legislature?

- 0. No
- 1. Yes

Min. Year:2011 Max. Year: 2012
N: 162

Min. Year:1960 Max. Year: 2012
N: 176 n: 7439 \bar{N} : 140 \bar{T} : 42

4.51.28 iaep_lrit Legislature's Ratification of International Treaties

Does the legislature have the constitutional authority to ratify international treaties negotiated by an executive?

- 0. No authority
- 1. One chamber approval necessary
- 2. Both chambers' approval necessary.

Min. Year:2011 Max. Year: 2012
N: 162

Min. Year:1960 Max. Year: 2012
N: 176 n: 6833 \bar{N} : 129 \bar{T} : 39

4.51.29 iaep_lvp Legislature Veto Power

Does the legislature have the constitutional power to stop executive action, in effect a legislative veto?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 159

Min. Year:1960 Max. Year: 2012
N: 176 n: 6455 \bar{N} : 122 \bar{T} : 37

4.51.30 iaep_milo Some other executive have the power to use force abroad

Is the power to use military force vested in some other executive?

- 0. No
- 1. Yes

Min. Year:2011 Max. Year: 2012
N: 162

Min. Year:1960 Max. Year: 2012
N: 176 n: 7439 \bar{N} : 140 \bar{T} : 42

4.51.31 iaep_nee National Elections for an Executive

Does the country hold national elections for an executive? We consider national elections to involve subjecting the executive to some form of popular plebiscite. This electoral process may or may not bear any relationship to the ultimate appointment of the executive. Executive council elections that select an executive are not considered national elections.

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 161

Min. Year:1960 Max. Year: 2012
N: 176 n: 7381 \bar{N} : 139 \bar{T} : 42

4.51.32 iaep_nel National Elections for the Legislature

Does the country hold national elections for the legislature We consider national elections to involve subjecting the members of the legislature to some form of popular plebiscite. While seats may be divided into districts, we consider national elections to occur when district-wide elections are organized at the national level.

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 161

Min. Year:1960 Max. Year: 2012
N: 176 n: 6931 \bar{N} : 131 \bar{T} : 39

4.51.33 iaep_npa No Parties Allowed

Are no parties allowed?

- 0. No
- 1. Yes

Min. Year:2011 Max. Year: 2012
N: 162

Min. Year:1960 Max. Year: 2012
N: 176 n: 6970 \bar{N} : 132 \bar{T} : 40

4.51.34 iaep_nr National Referendums

Does the country hold national elections on referendum items?

- 0. No
- 1. Yes

Min. Year:2010 Max. Year: 2012
N: 159

Min. Year:1960 Max. Year: 2012

(Data downloaded: 2016-09-30)

Index of African Governance The Index of African Governance measures to which degree five categories of political goods are provided within Africa's fifty-three countries. Please refer to the original documentation for detailed information on how the indexes are constructed.

4.52.1 iag_hd Human Development

This category is based on e.g. indicators on economic inequality, life expectancy, access to drink-ing water and literacy rate. The index varies between 0 and 100 where higher values indicate better governance.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:2000 Max. Year: 2007
N: 53 n: 265 \bar{N} : 33 \bar{T} : 5

4.52.2 iag_iag Index of African Governance

The index is based on five sub-indicators: safety and security; rule of law, transparency and corruption; participation and human rights, sustainable economic opportunity; human development. In the calculation of the overall index each category is weighted equally. For more information on how the sub-categories are constructed, see below. The index varies between 0 and 100 where higher values indicate better governance.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:2000 Max. Year: 2007
N: 53 n: 265 \bar{N} : 33 \bar{T} : 5

4.52.3 iag_prh Participation and Human Rights

This category is based on e.g. indicators on free and fair elections, respect for civil rights, press freedom and women's rights. The index varies between 0 and 100 where higher values indicate better governance.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:2000 Max. Year: 2007
N: 53 n: 265 \bar{N} : 33 \bar{T} : 5

4.52.4 iag_rltc Rule of Law, Transparency and Corruption

Dummy variable coded 1 if there is an effective legislative chamber (based on information from Polity's Executive Constraints, p_xconst).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:2000 Max. Year: 2007
N: 53 n: 265 \bar{N} : 33 \bar{T} : 5

4.52.5 iag_seo Sustainable Economic Opportunity

This category is based on e.g. indicators on GDP per capita, inflation, government deficit/surplus and phone subscribers per capita. The index varies between 0 and 100 where higher values indicate better governance.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:2000 Max. Year: 2007
N: 53 n: 265 \bar{N} : 33 \bar{T} : 5

4.52.6 iag_ss Safety and Security

This category is based on e.g. indicators on homicide rate, government involvement in armed conflict and refugees and asylum seekers originating from the country. The index varies between 0 and 100 where higher values indicate better governance.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

4.53 International Country Risk Guide - The PRS Group

<https://www.prsgroup.com/about-us/our-two-methodologies/icrg>

(P. Group et al., n.d.)

(Data downloaded: 2016-09-30)

ICRG Indicator of Quality of Government ICRG collects political information and financial and economic data, converting these into risk points.

4.53.1 icrg_qog ICRG Indicator of Quality of Government

The mean value of the ICRG variables "Corruption", "Law and Order" and "Bureaucracy Quality", scaled 0-1. Higher values indicate higher quality of government.

Corruption (originally 6 points)

This is an assessment of corruption within the political system. Such corruption is a threat to foreign investment for several reasons: it distorts the economic and financial environment; it reduces the efficiency of government and business by enabling people to assume positions of power through patronage rather than ability; and, last but not least, it introduces an inherent instability into the

political process. The most common form of corruption met directly by business is financial corruption in the form of demands for special payments and bribes connected with import and export licenses, exchange controls, tax assessments, police protection, or loans. Such corruption can make it difficult to conduct business effectively, and in some cases may force the withdrawal or withholding of an investment. Although the measure takes such corruption into account, it is more concerned with actual or potential corruption in the form of excessive patronage, nepotism, job reservations, "favor-for-favors", secret party funding, and suspiciously close ties between politics and business. According to ICRG, these insidious sorts of corruption are potentially of much greater risk to foreign business in that they can lead to popular discontent, unrealistic and inefficient controls on the state economy, and encourage the development of the black market. The greatest risk in such corruption is that at some time it will become so overweening, or some major scandal will be suddenly revealed, so as to provoke a popular backlash, resulting in a fall or overthrow of the government, a major reorganizing or restructuring of the country's political institutions, or, at worst, a breakdown in law and order, rendering the country ungovernable.

Law and order (originally 6 points)

Law and Order are assessed separately, with each sub-component comprising zero to three points. The Law sub-component is an assessment of the strength and impartiality of the legal system, while the Order sub-component is an assessment of popular observance of the law. Thus, a country can enjoy a high rating in terms of its judicial system, but a low rating if it suffers from a very high crime rate or if the law is routinely ignored without effective sanction (for example, widespread illegal strikes).

Bureaucracy Quality (originally 4 points)

The institutional strength and quality of the bureaucracy is another shock absorber that tends to minimize revisions of policy when governments change. Therefore, high points are given to countries where the bureaucracy has the strength and expertise to govern without drastic changes in policy or interruptions in government services. In these low-risk countries, the bureaucracy tends to be somewhat autonomous from political pressure and to have an established mechanism for recruitment and training. Countries that lack the cushioning effect of a strong bureaucracy receive low points because a change in government tends to be traumatic in terms of policy formulation and day-to-day administrative functions.

<http://www.ictd.ac/datasets/the-ictd-government-revenue-dataset>
(Wilson Prichard & Goodall, 2014)
(Data downloaded: 2016-09-30)

The ICTD Government Revenue Dataset A major obstacle to cross-country research on the role of revenue and taxation in development has been the weakness of available data. This paper presents a new Government Revenue Dataset (GRD), developed through the International Centre for Tax and Development (ICTD). The dataset meticulously combines data from several major international databases, as well as drawing on data compiled from all available International Monetary Fund (IMF) Article IV reports.

(The International Institute for Democracy and Electoral Assistance, 2016a) (The International Institute for Democracy and Electoral Assistance, 2016b)

(Data downloaded: 2016-10-01)

International IDEA Unified Database International IDEA has been collecting comparative data on electoral processes and democracy related topics since its establishment in 1995. Global Database on Elections and Democracy. The database provides both quantitative and qualitative data for the latest election process. Quantitative data are given in the form of usual statistics, such as voter turnout and voting age population statistics, or in the form of multiple choices, such as types of electoral systems and models of electoral management. International IDEA's database on Political Finance is a leading source of comparative information on political finance regulations. It includes laws and regulations from 180 individual countries.

4.55.1 idea_bdac Ban on Anonymous Donations to Candidates

Is there a ban on anonymous donations to candidates? To ensure that donations do not come from other banned sources and to increase transparency, anonymous donations to candidates are sometimes banned outright or banned over a certain level (critics argue that provisions for anonymous donations protects the right to privacy of donors).

Anonymous donations is support, contributions or donations to political parties and/or candidates where the identity of the donor or contributor is not disclosed.

4.55.5 idea_bdfc Ban on Foreign Donations to Candidates

Is there a ban on donations from foreign interests to candidates? An important issue in many countries is to limit influence over national politics to forces within the country. Foreign interests such as governments, corporations, organizations and/or individuals may therefore be banned from making donations to political parties.

In order to limit influence over national politics to forces within the country, it is quite common to ban foreign interests from making donations to political parties. Among the entities prohibited to contribute directly or indirectly are governments, corporations, organizations or individuals who are not citizens; that do not reside in the country or have a large share of foreign ownership.

- 0. No
- 1. Yes

N: 191 n: 838 \bar{N} : 17 \bar{T} : 4

4.55.16 idea_esl Electoral System for National Legislature

Electoral System for National Legislature:

1. List Proportional Representation (List PR)

Under a List Proportional Representation (List PR) system each party or grouping presents a list of candidates for a multi-member electoral district, the voters vote for a party, and parties receive seats in proportion to their overall share of the vote. In some (closed list) systems the winning candidates are taken from the lists in order of their position on the lists. If the lists are 'open' or 'free' the voters can influence the order of the candidates by marking individual preferences.

2. Block Vote (BV)

Block Vote is a plurality/majority system used in multi-member districts. Electors have as many votes as there are candidates to be elected. The candidates with the highest vote totals win the seats. Usually voters vote for candidates rather than parties and in most systems may use as many, or as few, of their votes as they wish.

4. First Past the Post (FPTP)

First Past The Post is the simplest form of plurality/majority electoral system. The winning candidate is the one who gains more votes than any other candidate, even if this is not an absolute majority of valid votes. The system uses single-member districts and the voters vote for candidates rather than political parties.

5. Two-Round System (TRS)

The Two-Round System is a plurality/majority system in which a second election is held if no candidate or party achieves a given level of votes, most commonly an absolute majority (50 per cent plus one), in the first election round. A Two-Round System may take a majority-plurality form-more than two candidates contest the second round and the one wins the highest number of votes in the second round is elected, regardless of whether they have won an absolute majority-or a majority run-off form-only the top two candidates in the first round contest the second round.

6. Mixed Member Proportional (MMP)

Mixed Member Proportional is a mixed system in which the choices expressed by the voters are used to elect representatives through two different systems-one List PR system and (usually) one plurality/majority system-where the List PR system compensates for the disproportionality in the results from the plurality/majority system.

7. Single Transferable Vote (STV)

The Single Transferable Vote is a preferential system in which the voter has one vote in a multi-member district and the candidates that surpass a specified quota of first preference votes are immediately elected. In successive counts, votes are redistributed from least successful candidates, who are eliminated, and votes surplus to the quota are redistributed from successful candidates, until sufficient candidates are declared elected. Voters normally vote for candidates rather than political parties, although a party-list option is possible.

8. Alternative Vote (AV)

The Alternative Vote is a preferential plurality/majority system used in single-member districts. Voters use numbers to mark their preferences on the ballot paper. A candidate who receives an absolute majority (50 per cent plus 1) of valid first preference votes is declared elected. If no candidate achieves an absolute majority of first preferences, the least successful candidates are eliminated and their votes reallocated according to their second preferences until one candidate has an absolute majority. Voters vote for candidates rather than political parties.

9. Single Non-Transferable Vote (SNTV)

Under the Single Non-Transferable Vote system voters cast a single vote in a multi-member district. The candidates with the highest vote totals are declared elected. Voters vote for candidates rather than political parties.

11. Limited Vote (LV)

Limited Vote is a candidate-centred electoral system used in multi-member districts in which electors have more than one vote, but fewer votes than there are candidates to be elected. The candidates with the highest vote totals win the seats.

12. First Past the Post, Block Vote (FPTPBV)

13. First Past the Post, List Proportional Representation (FPTPList PR)

4.55.17 idea_esp Electoral System for the President

Electoral System for the President:

1. Two-Round System (TRS)

The Two-Round System is a plurality/majority system in which a second election is held if no candidate or party achieves a given level of votes, most commonly an absolute majority (50 per cent plus one), in the first election round. A Two-Round System may take a majority-plurality form-more than two candidates contest the second round and the one wins the highest number of votes in the second round is elected, regardless of whether they have won an absolute majority-or a majority run-off form-only the top two candidates in the first round contest the second round.

4. First Past the Post (FPTP)

First Past The Post is the simplest form of plurality/majority electoral system. The winning can-

didate is the one who gains more votes than any other candidate, even if this is not an absolute majority of valid votes. The system uses single-member districts and the voters vote for candidates rather than political parties.

5. Supplementary Vote (SV)

6. Single Transferable Vote (STV)

The Single Transferable Vote is a preferential system in which the voter has one vote in a multi-member district and the candidates that surpass a specified quota of first preference votes are immediately elected. In successive counts, votes are redistributed from least successful candidates, who are eliminated, and votes surplus to the quota are redistributed from successful candidates, until sufficient candidates are declared elected. Voters normally vote for candidates rather than political parties, although a party-list option is possible.

4.55.18 idea_frc Candidates have to Report their Finances (campaigns)

Do candidates have to report on their campaigns finances? To ensure transparency in campaign finance, some countries require that candidates submit special financial reports in relation to election campaigns.

Campaign finance is financial transactions, to political parties or candidates, related to an electoral campaign which could include formal, financial, or in-kind donations or expenditures.

4.55.22 idea_ldp Limit on the Donation to Political Parties (time-period)

Is there a limit on the amount a donor can contribute to a political party over a time period (not election specific)? To reduce the influence of wealthy benefactors over party politics, some countries limit the maximum size of donations. This can also help to reduce the risk of donors trying to avoid campaign contribution limits by making large donations well ahead of elections.

4.55.29 idea_pfp Direct Public Funding of Political Parties

Are there provisions for direct public funding to political parties? A key question in many countries is whether monetary assistance is provided from the State to political parties (public funding). It is argued that such support can help smaller parties make their voice heard, strengthen the capacity of political parties and to level the electoral playing field.

Direct Public Funding is government provision of money or subsidies to political parties or candidates during election campaigns or for regular party financing.

- 0. No
- 1. Yes

Note: Different types of "Yes" coded as 1. Yes : Yes, in relation to campaigns; Yes, regularly provided funding; Yes, both regularly provided funding and in relation to campaigns. Original data source provides codes for all types.

4.57 International Monetary Fund

<http://www.imf.org/external/pubs/ft/weo/2014/01/weodata/download.aspx>
(IMF, 2014)
(Data downloaded: 2016-10-04)

World Economic Outlook Database The World Economic Outlook (WEO) database contains selected macroeconomic data series from the statistical appendix of the World Economic Outlook report, which presents the IMF staff's analysis and projections of economic developments at the global level, in major country groups and in many individual countries. The WEO is released in April and September/October each year. Use this database to find data on national accounts, inflation, unemployment rates, balance of payments, fiscal indicators, trade for countries and country groups (aggregates), and commodity prices whose data are reported by the IMF. Data are available from 1980 to the present, and projections are given for the next two years. Additionally, medium-term projections are available for selected indicators. For some countries, data are incomplete or unavailable for certain years.

4.57.1 imf_ab Current account balance (Percent of GDP)

Current account balance (% of GDP). Current account is all transactions other than those in financial and capital items. The major classifications are goods and services, income and current transfers. The focus of the BOP is on transactions (between an economy and the rest of the world) in goods, services, and income. Note: only real data is added to QoG dataset, estimated values coded as missing.

Min. Year:2010 Max. Year: 2012

4.57.3 imf_exp Government expenditure (Percent of GDP)

Government expenditure (% of GDP). Total expenditure consists of total expense and the net acquisition of nonfinancial assets.

Note: Apart from being on an accrual basis, total expenditure differs from the GFSM 1986 definition of total expenditure in the sense that it also takes the disposals of nonfinancial assets into account.

Min. Year:2010 Max. Year: 2012
N: 177

Min. Year:1980 Max. Year: 2012
N: 187 n: 3635 \bar{N} : 110 \bar{T} : 19

4.57.4 imf_expg Volume of exports of goods (Percent change)

Volume of exports of goods (% change). Percent change of volume of exports of goods refers to the aggregate change in the quantities of exports of goods whose characteristics are unchanged. The goods and their prices are held constant, therefore changes are due to changes in quantities only.

Min. Year:2010 Max. Year: 2013
N: 154

Min. Year:1980 Max. Year: 2015
N: 175 n: 4858 \bar{N} : 135 \bar{T} : 28

4.57.5 imf_gd Government gross debt (Percent of GDP)

Government gross debt (% of GDP). Gross debt consists of all liabilities that require payment or payments of interest and/or principal by the debtor to the creditor at a date or dates in the future. This includes debt liabilities in the form of SDRs, currency and deposits, debt securities, loans, insurance, pensions and standardized guarantee schemes, and other accounts payable. Thus, all liabilities in the GFSM 2001 system are debt, except for equity and investment fund shares and financial derivatives and employee stock options. Debt can be valued at current market, nominal, or face values.

Min. Year:2010 Max. Year: 2012
N: 169

Min. Year:1980 Max. Year: 2012
N: 177 n: 3011 \bar{N} : 91 \bar{T} : 17

4.57.6 imf_gdp GDP (Billions, US dollar)

GDP (Billions, US dollar). Values are based upon GDP in national currency converted to U.S. dollars using market exchange rates (yearly average). Exchange rate projections are provided by country economists for the group of other emerging market and developing countries. Exchange rates for advanced economies are established in the WEO assumptions for each WEO exercise. Expenditure-based GDP is total final expenditures at purchasers' prices (including the f.o.b. value of exports of goods and services), less the f.o.b. value of imports of goods and services.

Min. Year:2010 Max. Year: 2012
N: 147

Min. Year:1980 Max. Year: 2012
N: 183 n: 5021 \bar{N} : 152 \bar{T} : 27

4.57.7 imf_gdpc GDP per capita (US dollar)

GDP per capita (US dollar). GDP is expressed in current U.S. dollars per person. Data are derived by first converting GDP in national currency to U.S. dollars and then dividing it by total population.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

N: 185 n: 5004 \bar{N} : 161 \bar{T} : 27

4.57.11 imf_gns Gross national savings (Percent of GDP)

Gross national savings (% of GDP). Expressed as a ratio of gross national savings in current local currency and GDP in current local currency. Gross national saving is gross disposable income less final consumption expenditure after taking account of an adjustment for pension funds. [SNA 1993] For many countries, the estimates of national saving are built up from national accounts data on gross domestic investment and from balance of payments-based data on net foreign investment.

Min. Year:2010 Max. Year: 2012
N: 146

Min. Year:1980 Max. Year: 2012
N: 169 n: 4826 \bar{N} : 146 \bar{T} : 29

4.57.12 imf_imp Volume of imports of goods and services (Percent change)

Volume of imports of goods and services (% change). Percent change of volume of imports refers to the aggregate change in the quantities of total imports whose characteristics are unchanged. The goods and services and their prices are held constant, therefore changes are due to changes in quantities only.

Min. Year:2010 Max. Year: 2013

Min. Year:1980 Max. Year: 2015
N: 175 n: 4883 \bar{N} : 136 \bar{T} : 28

4.57.14 imf_infl Inflation (Index)

Inflation (Index). Expressed in averages for the year, not end-of-period data. A consumer price index (CPI) measures changes in the prices of goods and services that households consume. Such changes affect the real purchasing power of consumers' incomes and their welfare. As the prices of different goods and services do not all change at the same rate, a price index can only reflect their average movement. A price index is typically assigned a value of unity, or 100, in some reference period and the values of the index for other periods of time are intended to indicate the average proportionate, or percentage, change in prices from this price reference period. Price indices can also be used to measure differences in price levels between different cities, regions or countries at the same point in time. [CPI Manual 2004, Introduction] For euro countries, consumer prices are calculated based on harmonized prices. For more information see http://epp.eurostat.ec.europa.eu/cache/ITY_OFFPUB/KS-BE-04-001/EN/KS-BE-04-001-EN.PDF]

Min. Year:2010 Max. Year: 2013

N: 187 n: 5219 \bar{N} : 154 \bar{T} : 28

4.57.15 imf_inflch Inflation (Percent change)

Inflation (% change). Annual percentages of average consumer prices are year-on-year changes.

Min. Year:2010 Max. Year: 2013
N: 176

Min. Year:1980 Max. Year: 2013
N: 188 n: 5287 \bar{N} : 156 \bar{T} : 28

4.57.16 imf_inv Total investment (Percent of GDP)

Total investment (% of GDP). Expressed as a ratio of total investment in current local currency and GDP in current local currency. Investment or gross capital formation is measured by the total value of the gross fixed capital formation and changes in inventories and acquisitions less disposals of valuables for a unit or sector.

Min. Year:2010 Max. Year: 2012
N: 149

Min. Year:1980 Max. Year: 2012
N: 172 n: 4835 \bar{N} : 147 \bar{T} : 28

4.57.17 imf_nd Government net debt (Percent of GDP)

Government net debt (% of GDP). Net debt is calculated as gross debt minus financial assets corresponding to debt instruments. These financial assets are: monetary gold and SDRs, currency and deposits, debt securities, loans, insurance, pension, and standardized guarantee schemes, and other accounts receivable.

Min. Year:2010 Max. Year: 2012
N: 95

Min. Year:1980 Max. Year: 2012
N: 99 n: 1738 \bar{N} : 53 \bar{T} : 18

4.57.18 imf_nlb Government net lending/borrowing (Percent of GDP)

Government net lending/borrowing (% of GDP). Net lending / borrowing is calculated as revenue minus total expenditure. This is a core GFS balance that measures the extent to which general government is either putting financial resources at the disposal of other sectors in the economy and nonresidents (net lending), or utilizing the financial resources generated by other sectors and nonresidents (net borrowing). This balance may be viewed as an indicator of the financial impact of general government activity on the rest of the economy and nonresidents (GFSM 2001, paragraph 4.17).

Note: Net lending/borrowing is also equal to net acquisition of financial assets minus net incurrence of liabilities.

Min. Year:2010 Max. Year: 2012
N: 177

Min. Year:1980 Max. Year: 2012
N: 187 n: 3609 \bar{N} : 109 \bar{T} : 19

4.57.19 imf_pop Population (Persons, Millions)

Population (Persons, Millions). For census purposes, the total population of the country consists of all persons falling within the scope of the census. In the broadest sense, the total may comprise either all usual residents of the country or all persons present in the country at the time of the census.

Min. Year:2010 Max. Year: 2013
N: 110

Min. Year:1980 Max. Year: 2015
N: 182 n: 4743 \bar{N} : 132 \bar{T} : 26

4.57.20 imf_ppgdp GDP Output Gap (% of potential GDP)

GDP Output Gap (% of potential GDP). Output gaps for advanced economies are calculated as actual GDP less potential GDP as a percent of potential GDP. Estimates of output gaps are subject to a significant margin of uncertainty.

Min. Year:2011 Max. Year: 2012
N: 27

Min. Year:1980 Max. Year: 2012
N: 27 n: 801 \bar{N} : 24 \bar{T} : 30

4.57.21 imf_rev Government revenue (Percent of GDP)

Government revenue (% of GDP). Revenue consists of taxes, social contributions, grants receivable, and other revenue. Revenue increases government's net worth, which is the difference between its assets and liabilities (GFSM 2001, paragraph 4.20).

Note: Transactions that merely change the composition of the balance sheet do not change the net worth position, for example, proceeds from sales of nonfinancial and financial assets or incurrence of liabilities.

Min. Year:2010 Max. Year: 2012
N: 177

Min. Year:1980 Max. Year: 2012

4.57.22 imf_ue Unemployment rate (Percent of total labor force)

Unemployment rate (Percent of total labor force). Unemployment rate can be defined by either the national definition, the ILO harmonized definition, or the OECD harmonized definition. The OECD harmonized unemployment rate gives the number of unemployed persons as a percentage of the labor force (the total number of people employed plus unemployed). As defined by the International Labour Organization, unemployed workers are those who are currently not working but are willing and able to work for pay, currently available to work, and have actively searched for work.

4.58 ERCAS European Research Centre for Anti-Corruption and State-Building

<http://integrity-index.org/>

(project is co-funded by the Seventh Framework Programme for Research & of the European Union., 2016)

(Data downloaded: 2016-10-25)

Index of Public Integrity This dataset contains all data used in the construction of the Index of Public Integrity (IPI). The overall IPI score is the arithmetic average of the following six components scores: Judicial Independence, Administrative Burden, Trade Openness, Budget Transparency, E-Citizenship, Freedom of the Press.

Several indices currently show that corruption remains a key issue not only in developing countries but also in many modern societies. How to control it better has thus become a major question of international development. Yet, the common corruption indices tell us mainly about how citizens and experts perceive the state of corruption in their society. They do not tell us anything about the causes of corruption nor about how the situation could be improved. The Index of Public Integrity ipi-toolbar takes a different approach. It assesses a society's capacity to control corruption and ensure that public resources are spent without corrupt practices. It is based on years of research and the evaluation of the efforts of different societies to make advances in the control of corruption.

Evidence from comparisons across countries shows that establishing effective control of corruption requires much more than the mere adoption of specific tools and strict legal regulations. It relies on a balance between a state calibrated to reduce the possibility of the abuse of influence and a society's capacity to hold its government accountable. The IPI highlights the most important dimensions of that mechanism. It correlates with the World Bank's and Transparency International's measures of control of corruption, but in contrast to them it is more objective and transparent.

Note: The original data for index estimations correspond to 2015, therefore the data from this report assigned to 2015.

4.58.1 ipi_ab Administrative Burden (index)

Administrative Burden measures the extent of domestic bureaucratic regulation. An excessive administrative burden and too many regulations open doors for discretion and red tape, thereby resulting in a high risk of corruption. Consists of the simple mean of standardized values of: number of procedures required to start up a business; time needed to start up a business; number of tax payments per year; time to pay taxes. The indicators are taken from the World Bank Doing Business Data 2016. This mean value has been transformed to be in range between 1 and 10 with 10 implying the lowest administrative burden.

Min. Year: 2015 Max. Year: 2015

 \bar{T} : N/A

4.58.2 ipi_bt Budget Transparency (index)

Budget Transparency measures the extent and quality of public accessibility to the executive's budget proposals in order to provide a control mechanism for discretionary public spending. Simple mean value of the scores resulting from 14 specific questions from the Open Budget Survey that cover transparency of the Executive's Budget Proposal. More information on questions and respective scores are presented in the full dataset. The data is to a large extent provided by the International Budget Partnership and in some cases relies on own data. The value has been standardized and transformed to be in range between 1 and 10 with 10 implying the highest budget transparency.

 \bar{T} : N/A

4.58.3 ipi_e E-Citizenship (index)

E-Citizenship captures the ability of citizens to use online tools and social media and thus exercise social accountability. Internet media in general and social networks in particular are indispensable components of citizen empowerment. Simple mean of standardized values of the: Fixed broadband subscriptions (% population); Internet users (% population); Facebook users (% population). The first two variables were taken from International Telecommunication Union's ICT Dataset 2015, the latter from the Internet World Stats 2015. The value has been transformed to be in range between 1 and 10 with 10 implying the highest score for E-Citizenship.

N: 105

Variable not included
in Time-Series Data

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.58.4 ipi_fop Freedom of the Press (index)

Freedom of the Press measures the degree of media independence resulting from a specific national legal, political and economic environment in which print, broadcast, and internet-based media operate. Free media are indispensable to the monitoring of democratic institutions, public accountability and good government. The score stems from the Freedom House Freedom of the Press Report 2015. Values have been standardized and transformed to be in range between 1 and 10 with 10 implying the highest freedom of the press.

Min. Year: 2015 Max. Year: 2015

 \bar{T} : N/A

4.58.6 ipi_ji Judicial Independence (index)

Judicial Independence captures the extent of impartial and non-corrupt judiciary systems that constitute legal constraints on government power and are thus key elements of effective control of corruption. Based on the \bar{T} judicial independence indicator from the Executive Opinion Survey of the World Economic Forum Global Competitiveness Dataset 2015-2016 that asks the question \bar{T} To what extent is the judiciary in your country independent from influences of members of government, citizens, or firms? [1 = heavily influenced; 7 = entirely independent]. The indicator has been standardized and transformed to be in range between 1 and 10 with 10 implying the highest judicial independence.

Min. Year: 2015 Max. Year: 2015

 \bar{T} : N/A

4.58.7 ipi_tradeopen Trade Openness (index)

Trade Openness measures the extent of regulation concerning a country's external economic activity. Open countries can control corruption better by removing room for discretion at the level of administrative trade barriers and thus allowing free competition. Made up from the simple mean of standardized values of: average number of documents required to export and import; time for exporting and importing. The indicators stem from the World Bank Doing Business Data 2015. Their value has been transformed to be in range between 1 and 10 with 10 implying the highest trade openness.

4.59 Inter-Parliamentary Union

<http://www.ipu.org/wmn-e/world-arc.htm>
(Inter-Parliamentary Union, 2016)
(Data downloaded: 2016-10-05)

Inter-Parliamentary Union Data The data has been compiled by the Inter-Parliamentary Union on the basis of information provided by National Parliaments. Comparative data on the world and regional averages as well as data concerning the two regional parliamentary assemblies elected by direct suffrage can be found on separate pages.

Note: The figures for South Africa on the distribution of seats in the Upper House do not include the 36 special rotating delegates appointed on an ad hoc basis, and all percentages given are therefore calculated on the basis of the 54 permanent seats. Included in the QoG Dataset are the data for January each year.

4.60 International Development Association (IDA)

<http://ida.worldbank.org/financing/ida-resource-allocation-index>
(W. B. Group, 2016)
(Data downloaded: 2016-10-05)

IDA Resource Allocation Index (IRAI) The World Bank's IDA Resource Allocation Index (IRAI) is based on the results of the annual CPIA exercise that covers the IDA eligible countries. The CPIA rates countries against a set of 16 criteria grouped in four clusters: (a) economic management; (b) structural policies; (c) policies for social inclusion and equity; and (d) public sector management and institutions. The criteria (pdf) are focused on balancing the capture of the key factors that foster growth and poverty reduction, with the need to avoid undue burden on the assessment process. To fully underscore the importance of the CPIA in the IDA Performance Based Allocations, the overall country score is referred to as the IRAI.

4.60.1 irai_bhr Building Human Resources

This criterion assesses the national policies and public and private sector service delivery that affect access to and quality of: (a) health and nutrition services, including population and reproductive health, (b) education, ECD, training and literacy programs, and (c) prevention and treatment of HIV/AIDS, tuberculosis, and malaria. ECD refers to Early Child Development programs, including both formal and non-formal programs (which may combine education, health and nutrition interventions) aimed at children aged 0-6.

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.2 irai_bre Business Regulatory Environment

This criterion assesses the extent to which the legal, regulatory, and policy environment helps or hinders private business in investing, creating jobs, and becoming more productive. The emphasis is on direct regulations of business activity and regulation of goods and factor markets. Three subcomponents are measured: (a) regulations affecting entry, exit, and competition; (b) regulations of ongoing business operations; and (c) regulations of factor markets (labor and land). These three components should be considered separately and equally weighted.

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.3 irai_dp Debt Policy

This criterion assesses whether the debt management strategy is conducive to minimize budgetary risks and ensure long-term debt sustainability. The criterion evaluates the extent to which external and domestic debts are contracted with a view to achieving/maintaining debt sustainability, and the degree of co-ordination between debt management and other macroeconomic policies. This criterion covers the adequacy of the debt recording systems, the timelines of the public debt data, and the effectiveness of the debt management unit.

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.4 irai_epru Equity of Public Resource Use

This criterion assesses the extent to which the pattern of public expenditures and revenue collection affects the poor and is consistent with national poverty reduction priorities. The assessment of the consistency of government spending with the poverty reduction priorities takes into account the extent to which: (a) individuals, groups, or localities that are poor, vulnerable, or have unequal access to services and opportunities are identified; (b) a national development strategy with explicit interventions to assist the groups identified in (a) has been adopted; and (c) the composition and incidence of public expenditures are tracked systematically and their results feedback into subsequent resource allocation decisions. The assessment of the revenue collection dimension takes into account the incidence of major taxes, e.g., whether they are progressive or regressive, and their alignment with the poverty reduction priorities.

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.5 irai_erm Efficiency of Revenue Mobilization

This criterion assesses the overall pattern of revenue mobilization, not only the tax structure as it exists on paper, but revenue from all sources as they are actually collected.

Min. Year:2013 **Max. Year:** 2013
N: 80

Min. Year:2005 **Max. Year:** 2015
N: 81 **n:** 830 \bar{N} : 75 \bar{T} : 10

4.60.6 irai_fp Fiscal Policy

This criterion assesses the short- and medium-term sustainability of fiscal policy (taking into account monetary and exchange rate policy and the sustainability of the public debt) and its impact on growth. Fiscal policy is not sustainable if it results in a continuous increase in the debt to GDP ratio and/or creates financing needs that cannot be adequately met by the supply of funds available to the public sector. This criterion covers the extent to which: (a) the primary balance is managed to ensure sustainability of the public finances; (b) public expenditure/revenue can be adjusted to absorb shocks if necessary; and (c) the provision of public goods, including infrastructure, is consistent with medium-term growth. Sustainability is defined inclusive of off-budget government spending items and contingent liabilities. The impact of fiscal policy on economic growth depends on the marginal productivity of government spending and on the distortions introduced by taxes collected to finance this spending.

Min. Year:2013 **Max. Year:** 2013
N: 80

Min. Year:2005 **Max. Year:** 2015
N: 81 **n:** 830 \bar{N} : 75 \bar{T} : 10

4.60.7 irai_fs Financial Sector

This criterion assesses the structure of the financial sector and the policies and regulations that affect it. Three dimensions are covered; (a) financial stability; (b) the sector's efficiency, depth, and resource mobilization strength; and (c) access to financial services. These are areas that are fundamental to support successful and sustainable reforms and development. The first dimension assesses the sector's vulnerability to shocks, the banking system's soundness, and the adequacy of relevant institutional elements, such as the degree of adherence to the Basel Core Principles and the quality of risk management and supervision. The second dimension assesses efficiency, the degree of competition, and the ownership structure of the financial system, as well as its depth and resource mobilization strength. The third dimension covers institutional factors, (such as the adequacy of payment and credit reporting systems) the regulatory framework affecting financial transactions (including collateral and bankruptcy laws and their enforcement) and the extent to which consumers and firms have access to financial services.

Min. Year:2013 **Max. Year:** 2013
N: 80

Min. Year:2005 **Max. Year:** 2015
N: 81 **n:** 830 \bar{N} : 75 \bar{T} : 10

4.60.8 irai_ge Gender Equality

This criterion assesses the extent to which the country has enacted and put in place institutions and programs to enforce laws and policies that (a) promote equal access for men and women to human capital development; (b) promote equal access for men and women to productive and economic resources; and (c) give men and women equal status and protection under the law.

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.9 irai_index IDA Resource Allocation Index

The IDA Resource Allocation Index measures the quality of a country's present policy and institutional framework. "Quality" refers to how conducive that framework is to fostering poverty reduction, sustainable growth, and the effective use of development assistance. It is calculated as the mean of the score of the four clusters Economic Management, Structural Policies, Policies for Social Inclusion/Equity and Public Sector Management and Institutions. The index ranges between 1 (lowest) and 6 (highest).

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.10 irai_mm Macroeconomic Management

This criterion assesses the quality of the monetary/exchange rate and aggregate demand policy framework. A high quality policy framework is one that is favorable to sustained medium-term economic growth. Critical components are: a monetary/exchange rate policy with clearly defined price stability objectives; aggregate demand policies that focus on maintaining short and medium-term external balance (under the current and foreseeable external environment); and avoid crowding out private investment. Fiscal issues, including sustainability, are covered in *cpia_fp*, and debt issues are covered in *cpia_dp*.

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.11 irai_pies Policies and Institutions for Environment

This criterion assesses the extent to which environmental policies foster the protection and sustainable use of natural resources and the management of pollution. Assessment of environmental sustainability requires multi-dimension criteria (i.e. for air, water, waste, conservation management, coastal zones management, natural resources management).

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.12 irai_prg Property Rights and Rule-Based Government

This criterion assesses the extent to which private economic activity is facilitated by an effective legal system and rule-based governance structure in which property and contract rights are reliably respected and enforced. Each of three dimensions should be rated separately: (a) legal basis for secure property and contract rights; (b) predictability, transparency, and impartiality of laws and regulations affecting economic activity, and their enforcement by the legal and judicial system; and (c) crime and violence as an impediment to economic activity.

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.13 irai_qbfm Quality of Budgetary and Financial Management

This criterion assesses the extent to which there is: (a) a comprehensive and credible budget, linked to policy priorities; (b) effective financial management systems to ensure that the budget is implemented as intended in a controlled and predictable way; and (c) timely and accurate accounting and fiscal reporting, including timely and audited public accounts and effective arrangements for follow up.

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.14 irai_qpa Quality of Public Administration

This criterion assesses the extent to which civilian central government staffs (including teachers, health workers, and police) are structured to design and implement government policy and deliver services effectively. Civilian central government staffs include the central executive together with all other ministries and administrative departments, including autonomous agencies. It excludes the armed forces, state-owned enterprises, and sub-national government.

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.15 irai_spl Social Protection and Labor

This criterion assesses government policies in the area of social protection and labor market regulation, which reduce the risk of becoming poor, assist those who are poor to better manage further risks, and ensure a minimal level of welfare to all people. Interventions include: social safety net programs, pension and old age savings programs; protection of basic labor standards; regulations to reduce segmentation and inequity in labor markets; active labor market programs, such as public works or job training; and community driven initiatives. In interpreting the guidelines it is important to take into account the size of the economy and its level of development. This criterion is a composite indicator of five different areas of social protection and labor policy: (a) social safety net programs; (b) protection of basic labor standards; (c) labor market regulations; (d) community driven initiatives; and (e) pension and old age savings programs.

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 826 \bar{N} : 75 \bar{T} : 10

4.60.16 irai_t Trade

This criterion assesses how the policy framework fosters trade in goods. Two areas are covered: (a) trade regime restrictiveness focusing on the height of tariffs barriers, the extent to which non-tariff barriers (NTBs) are used, and the transparency and predictability of the trade regime; and (b) customs and trade facilitation, including the extent to which the customs service is free of corruption, relies on risk management, processes duty collections and refunds promptly, and operates transparently. The overall score is a weighted average of the scores for the two components: (a) trade restrictiveness (0.75) and (b) customs/trade facilitation (0.25).

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015
N: 81 n: 830 \bar{N} : 75 \bar{T} : 10

4.60.17 irai_tac Transparency, Accountability and Corruption in the Public Sector

This criterion assesses the extent to which the executive can be held accountable for its use of funds and the results of its actions by the electorate and by the legislature and judiciary, and the extent to which public employees within the executive are required to account for the use of resources, administrative decisions, and results obtained. Both levels of accountability are enhanced by transparency in decision-making, public audit institutions, access to relevant and timely information, and public and media scrutiny. A high degree of accountability and transparency discourages corruption, or the abuse of public office for private gain. National and sub-national governments should be appropriately weighted. Each of three dimensions should be rated separately: (a) the accountability of the executive to oversight institutions and of public employees for their performance; (b) access of civil society to information on public affairs; and (c) state capture by narrow vested interests.

Min. Year:2013 Max. Year: 2013
N: 80

Min. Year:2005 Max. Year: 2015

4.61 Johnson & Wallack

<https://dataverse.harvard.edu/dataset.xhtml?persistentId=hdl:1902.1/17901>
(Wallack, 2012)
(Data downloaded: 2016-10-05)

Electoral Systems and the Personal Vote This database updates and expands the coding of electoral systems presented in Gaviria et al's (2003) Database of Particularism. Data now cover up to 180 countries from 1978-2005 and distinguish electoral systems by the degree to which electoral institutions create incentives for candidates to cultivate a personal vote - as described theoretically in Carey and Shugart (1995) and Gaviria et al. (2003) - including the amount of vote pooling among co-partisan candidates, the amount of parties' control over ballot access, and whether voters cast their votes for candidates or parties. The database also contains several variables that rank-order electoral systems by tier, distinguish mixed-member and other multi-tier electoral systems, capture district magnitude (in two ways), and record election years. Database created 2007. Database last updated 2010.

4.61.1 jw_avgballot Party Control over Ballot(lower/only house)

Country-level weighted averages of Party Control over Ballot - SMD (lower/only house) (jw_smdballot) and Party Control over Ballot - MMD (lower/only house) (jw_mmdballot), where the weights are the percentage of members that originate from each tier. This variable thus reflects the value of ballots for the average member sitting in the lower house. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Variable not included
in Cross-Section Data

4.61.3 jw_avgpool Sharing of Votes among Candidates(lower/only house)

Country-level weighted averages of Sharing of Votes among Candidates - SMD (lower/only house) (jw_smdpool) and Sharing of Votes among Candidates - MMD (lower/only house) (jw_mmdpool), where the weights are the percentage of members that originate from each tier. This variable thus reflects the value of the pooling of votes for the average member sitting in the lower house. The Pool variables measure the extent to which votes among candidates from the same party are shared. The variables equal (in order of increasing personal vote incentives): (0) where pooling of votes occurs across all candidates in a party in a district; (1) where pooling of votes occurs across some, but not all, candidates in a party in a district, or, where there is vote pooling across all candidates in a party in a district, but where the average district accounts for 5% or less of a legislature's membership; (2) where no pooling of votes occurs across candidates in a party (including single-member districts).

4.61.11 jw_indy Ballot Access for Independent Candidates(lower/only house)

Equals 1 wherever independent candidates are legally allowed (even where the legal requirements are strict), and 0 otherwise. This complements the cases where the ballot variables above equal 1 or 2,

since they are adjusted to capture de facto practice. `jw_indy` instead captures the de jure rules. A user could adjust the ballot variables above to be de jure if (s)he replaced values of 2 with values of 1 when `jw_indy = 0`. Refers to lower house elections. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1978 Max. Year: 2005
N: 106 n: 1987 \bar{N} : 71 \bar{T} : 19

4.61.12 `jw_indy2` Ballot Access for Independent Candidates(upper house)

Same as `jw_indy`, but for upper house elections. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Variable not included in Cross-Section Data

Min. Year: 1978 Max. Year: 2005
N: 21 n: 423 \bar{N} : 15 \bar{T} : 20

4.61.13 `jw_legsize` Number of Coded Legislators(lower/only house)

The number of legislators coded in the dataset. These may not account for the total number of legislators if there are appointed legislators that have no electoral rules to code.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1978 Max. Year: 2005
N: 155 n: 2704 \bar{N} : 97 \bar{T} : 17

4.61.14 `jw_legsize2` Number of Coded Legislators(upper house)

The number of legislators coded in the dataset. These may not account for the total number of legislators if there are appointed legislators that have no electoral rules to code.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 32 n: 556 \bar{N} : 20 \bar{T} : 17

4.61.15 `jw_mcand` District Magnitude of Average Legislator(lower/only house)

In keeping with the emphasis on the incentives faced by individual legislators, this variable measures the district magnitude considering the viewpoint of the average legislator in the lower house. It is scored as a weighted average of the various district sizes, where weights are computed as the number of legislators running in the district of each magnitude divided by the total number of seats. For example: A country with 300 seats divided among one national district with 200 members and 100 single-member districts has a magnitude for the average legislator of $[(200*200) + (100*1)]/300$, which yields a figure of 133.67.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 124 n: 2136 \bar{N} : 76 \bar{T} : 17

4.61.16 `jw_mcand2` District Magnitude of Average Legislator(upper house)

This is the district magnitude of the average legislator in the upper house.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 43 n: 654 \bar{N} : 23 \bar{T} : 15

4.61.17 `jw_mdist` Average District Magnitude(lower/only house)

This is the standard magnitude of the average district in the lower house. For example: A country with 300 seats divided among one national district with 200 members and 100 single-member districts would have an average district magnitude (`jw_mdist`) of 2.97 (i.e., $300/101$).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 161 n: 3097 \bar{N} : 111 \bar{T} : 19

4.61.18 jw_mdistr2 Average District Magnitude(upper house)

This is the average district magnitude in the upper house.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 29 n: 566 \bar{N} : 20 \bar{T} : 20

4.61.19 jw_mmdballot Party Control over Ballot - MMD(lower/only house)

Ballot (coded as above) for multi-member district tiers in elections to the lower house. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 94 n: 1619 \bar{N} : 58 \bar{T} : 17

4.61.20 jw_mmdballot2 Party Control over Ballot - MMD(upper house)

Ballot for multi-member district tiers in elections to the upper house. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 16 n: 297 \bar{N} : 11 \bar{T} : 19

4.61.21 jw_mmdpool Sharing of Votes among Candidates - MMD(lower/only house)

Pool for multi-member district tiers in elections to the lower house. The Pool variables measure the extent to which votes among candidates from the same party are shared. The variables equal (in order of increasing personal vote incentives): (0) where pooling of votes occurs across all candidates in a party in a district; (1) where pooling of votes occurs across some, but not all, candidates in a party in a district, or, where there is vote pooling across all candidates in a party in a district, but where the average district accounts for 5% or less of a legislature's membership; (2) where no pooling of votes occurs across candidates in a party (including single-member districts).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 94 n: 1599 \bar{N} : 57 \bar{T} : 17

4.61.22 jw_mmdpool2 Sharing of Votes among Candidates - MMD(upper house)

Pool for multi-member district tiers in elections to the upper house. The Pool variables measure the extent to which votes among candidates from the same party are shared. The variables equal (in order of increasing personal vote incentives): (0) where pooling of votes occurs across all candidates in a party in a district; (1) where pooling of votes occurs across some, but not all, candidates in a party in a district, or, where there is vote pooling across all candidates in a party in a district, but where the average district accounts for 5% or less of a legislature's membership; (2) where no pooling of votes occurs across candidates in a party (including single-member districts).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 17 n: 303 \bar{N} : 11 \bar{T} : 18

4.61.23 jw_mmdvote Candidate or Party-specific Voting - MMD(lower/only house)

Vote for multi-member district tiers in elections to the lower house. The Vote variables focus attention on the distinction between casting votes for either parties or individual candidates. The variables equal (in order of increasing personal vote incentives): (0) where voters have only one vote for a party; (1) where voters can vote for a party or a candidate (as in open lists), where voters have multiple votes for multiple candidates (as in runoff or single-transferable vote systems), or where votes for a party or candidate are observationally equivalent (as in single-member districts); (2) where voters have one vote for an individual candidate.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 90 n: 1572 \bar{N} : 56 \bar{T} : 17

4.61.24 jw_mmdvote2 Candidate or Party-specific Voting - MMD(upper house)

Vote for multi-member district tiers in elections to the upper house. The Vote variables focus attention on the distinction between casting votes for either parties or individual candidates. The variables equal (in order of increasing personal vote incentives): (0) where voters have only one vote for a party; (1) where voters can vote for a party or a candidate (as in open lists), where voters have multiple votes for multiple candidates (as in runoff or single-transferable vote systems), or where votes for a party or candidate are observationally equivalent (as in single-member districts); (2) where voters have one vote for an individual candidate.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 16 n: 297 \bar{N} : 11 \bar{T} : 19

4.61.25 jw_multiround Runoff Elections

The variable indicates whether there are run-off elections. These are usually for SMDs with absolute majority requirements. Where jw_multiround is equal to 1, voters have more than a single vote to cast, albeit votes occur on separate election days.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 111 n: 2087 \bar{N} : 75 \bar{T} : 19

4.61.26 jw_multitier Multi Tier(lower/only house)

Indicates whether there are two or more tiers to the legislature.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 138 n: 2417 \bar{N} : 86 \bar{T} : 18

4.61.27 **jw_multitier2** Multi Tier (upper house)

Equals 1 wherever there are multiple allocation tiers, regardless of whether they are the result of mixed member systems that incorporate different members under different rules, or systems that have upper tiers within a single electoral system to compensate for disproportionality in lower tiers.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 28 n: 492 \bar{N} : 18 \bar{T} : 18

4.61.28 **jw_oneparty** Single Party System

Dummy variable, 1 if single-party system.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 170 n: 3481 \bar{N} : 124 \bar{T} : 20

4.61.29 **jw_parallel** Tiers allocated in Parallel

Coded 1 if multiple tiers are elected in parallel fashion, 0 when they are elected in (at least some-what) compensatory fashion. Is coded only when `jw_multitier = 1`.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 21 n: 256 \bar{N} : 9 \bar{T} : 12

4.61.30 **jw_persr** Personalistic Tier

This variable ranks countries in increasing order of incentives to cultivate a personal vote according to their more personalistic tier (or tier with the greater incentives to cultivate a personal vote). The variable varies from 1 to 13, corresponding to the thirteen positions in Carey & Shugart's (1995) ranking. For example, a country with a ranking of 13 would have a tier with the highest possible rank of incentives to cultivate a personal vote, although that tier may only account for a minority or small fraction of its members.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 127 n: 2264 \bar{N} : 81 \bar{T} : 18

4.61.31 **jw_propcoded** Proportion Coded Legislators(lower/only house)

Shows the proportion of total legislators (elected and non-elected) that are included in the database (i.e. those that are elected).

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 171 n: 3542 \bar{N} : 127 \bar{T} : 21

4.61.32 **jw_propcoded2** Proportion Coded Legislators(upper house)

This is the proportion of the total number of legislators (elected and non-elected) that are coded.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 52 n: 873 \bar{N} : 31 \bar{T} : 17

4.61.33 **jw_propmmd** Seats from Multi-Member Districts(lower/only house)

Proportion of seats from Multi-Member District (lower/only house).

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 155 n: 2740 \bar{N} : 98 \bar{T} : 18

4.61.34 **jw_propmmd2** Seats from Multi-Member Districts(upper house)

This is the proportion of coded legislators elected in multi-member districts.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 26 n: 478 \bar{N} : 17 \bar{T} : 18

4.61.35 **jw_propn** Seats from a National District(lower/only house)

The proportion of legislators that are elected via a national tier.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 170 n: 3421 \bar{N} : 122 \bar{T} : 20

4.61.36 `jw_propn2` Seats from a National District(upper house)

This is the proportion of coded legislators that are elected via a national tier. This is often (but not always) similar to the proportion elected via multi-member districts (`jw_propmmd`): some electoral systems have proportional representation based on regional multimember districts as well as national tiers (e.g. Hungary).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 67 n: 1104 \bar{N} : 39 \bar{T} : 16

4.61.37 `jw_propsmd` Seats from Single-Member Districts(lower/only house)

Proportion of seats from Single-Member Districts.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 155 n: 2700 \bar{N} : 96 \bar{T} : 17

4.61.38 `jw_propsmd2` Seats from Single-Member Districts(upper house)

This is the proportion of coded legislators elected in single-member districts. (Note: In the original data for Kyrgyzstan `propsmd2=60` in 1997-1999 and `propsmd2=45` 2000-2004. We have replaced these figures with missing values.)

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 23 n: 421 \bar{N} : 15 \bar{T} : 18

4.61.39 `jw_rank` Rank Vote (lower/only house)

Equals 1 in two circumstances: where voters may rank order candidates according to preference, or where citizens have multiple preference votes for multiple candidates, even if they may not specifically rank the candidates. Otherwise, `jw_rank` is equal to zero. Refers to lower house elections.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 90 n: 1783 \bar{N} : 64 \bar{T} : 20

4.61.40 jw_rank2 Rank Vote (upper house)

Same as jw_rank, but for upper house elections.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 21 n: 423 \bar{N} : 15 \bar{T} : 20

4.61.41 jw_smdballot Party Control over Ballot - SMD(lower/only house)

Ballot for single-member district tiers in elections to the lower house. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 71 n: 1084 \bar{N} : 39 \bar{T} : 15

4.61.42 jw_smdpool Sharing of Votes among Candidates - SMD(lower/only house)

Pool for single-member district tiers in elections to the lower house. The Pool variables measure the extent to which votes among candidates from the same party are shared. The variables equal (in order of increasing personal vote incentives): (0) where pooling of votes occurs across all candidates in a party in a district; (1) where pooling of votes occurs across some, but not all, candidates in a party in a district, or, where there is vote pooling across all candidates in a party in a district, but where the average district accounts for 5% or less of a legislature's membership; (2) where no pooling of votes occurs across candidates in a party (including single-member districts).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 73 n: 1109 \bar{N} : 40 \bar{T} : 15

4.61.43 `jw_smdvote` Candidate or Party-specific Voting - SMD(lower/only house)

Vote for single-member district tiers in elections to the lower house. The Vote variables focus attention on the distinction between casting votes for either parties or individual candidates. The variables equal (in order of increasing personal vote incentives): (0) where voters have only one vote for a party; (1) where voters can vote for a party or a candidate (as in open lists), where voters have multiple votes for multiple candidates (as in runoff or single-transferable vote systems), or where votes for a party or candidate are observationally equivalent (as in single-member districts); (2) where voters have one vote for an individual candidate.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 73 n: 1109 \bar{N} : 40 \bar{T} : 15

4.61.44 `jw_tiervote` Tiervote (lower/only house)

Equals 1 when citizens are given a separate vote for deputies in each legislative tier.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 111 n: 2141 \bar{N} : 76 \bar{T} : 19

4.61.45 `jw_tiervote2` Tiervote (upper house)

Equals 1 when citizens are given a separate vote for deputies in each legislative tier.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005

4.62 Kunčič

<https://sites.google.com/site/aljaskuncic/research>
(Kunčič, 2014)

(Data downloaded: 2016-09-16)

Institutional Quality Dataset More than 30 established institutional indicators can be clustered into three homogeneous groups of formal institutions: legal, political and economic, which capture to a large extent the complete formal institutional environment of a country. The latent qualities of legal, political and economic institutions for every country in the world and for every year are calculated. On this basis, a legal, political and economic World Institutional Quality Ranking are proposed, through which one can follow whether a country is improving or worsening its relative institutional environment. The calculated latent institutional quality measures can be useful in further panel data applications and add to the usual practice of using simply one or another index of institutional quality to capture the institutional environment.

4.63 LIS Cross-National Data Center in Luxembourg

<http://www.lisdatacenter.org/data-access/key-figures/download-key-figures/>
(LIS Cross-National Data Center in Luxembourg, 2016)
(Data downloaded: 2016-10-10)

Luxembourg Income Study Database and the Luxembourg Wealth Study Database LIS, formerly known as The Luxembourg Income Study, is a data archive and research center dedicated to cross-national analysis. LIS is home to two databases, the Luxembourg Income Study Database, and the Luxembourg Wealth Study Database. The Luxembourg Income Study Database (LIS), under constant expansion, is the largest available database of harmonised microdata collected from multiple countries over a period of decades. The newer Luxembourg Wealth Study Database (LWS), is the only cross-national wealth microdatabase in existence.

(Bolt & Zanden, 2014)

(Data downloaded: 2016-10-11)

Maddison Project Database The Maddison Project has launched an updated version of the original Maddison dataset in January 2013. The update incorporates much of the latest research in the field, and presents new estimates of economic growth in the world economic between AD 1 and 2010. The new estimates are presented and discussed in Bolt, J. and J. L. van Zanden (2014). The Maddison Project: collaborative research on historical national accounts. *The Economic History Review*, 67 (3): 627-651.

4.65.1 mad_gdp GDP levels (million)

GDP levels (million): GDP levels in million 1990 International Geary-Khamis dollars. (The Geary-Khamis dollar is a hypothetical unit of currency that has the same purchasing power that the U.S. dollar had in the United States at a given point in time).

(Data downloaded: 2016-10-11)

National Elections Across Democracy and Autocracy The National Elections across Democracy and Autocracy (NELDA)

4.66.1 nelda_fme First Multiparty Election

This indicates when a country is newly independent is having its first elections, when a country holds the first multiparty elections after a significant period of non-democratic rule, or when a country transitions from single-party elections to multi-party elections. Multiparty means that more than one party is allowed to contest the election, and that at least some of the parties are both nominally and effectively independent of the ruling actors.

Min. Year:2010 Max. Year: 2012
N: 121

Min. Year:1946 Max. Year: 2012
N: 172 n: 2219 \bar{N} : 33 \bar{T} : 13

4.66.2 nelda_mbbe Media Bias before Election

If there were reports by either domestic or outside actors of media bias in favor of the incumbent or ruling party, it is coded as a "yes." In cases where the media is totally controlled by the government, and/or no opposition is allowed, the answer is "yes." It is possible that the answer is "No" even if the political system is tightly controlled.

Min. Year:2010 Max. Year: 2012
N: 121

Min. Year:1946 Max. Year: 2012
N: 172 n: 2182 \bar{N} : 33 \bar{T} : 13

4.66.3 nelda_mtop Was More Than One Party Legal

This variable indicates whether multiple political parties were technically legal. The legalization of multiple parties need not necessarily mean the existence of a functioning opposition party, as there may be other non-legal barriers to the development of an opposition party. Similarly, a well organized opposition party may exist but may not be legal.

Min. Year:2010 Max. Year: 2012
N: 121

Min. Year:1946 Max. Year: 2012
N: 172 n: 2219 \bar{N} : 33 \bar{T} : 13

4.66.4 nelda_noe Number of Elections, Total

The number of Elections during the year (counting legislative, executive and constituent assembly elections).

Min. Year:2010 Max. Year: 2012
N: 121

Min. Year:1946 Max. Year: 2012
N: 172 n: 2219 \bar{N} : 33 \bar{T} : 13

4.66.5 nelda_noea Number of Elections, Constituent Assembly

Number of constituent assembly elections during the year.

Min. Year:2010 Max. Year: 2012
N: 121

Min. Year:1946 Max. Year: 2012
N: 172 n: 2219 \bar{N} : 33 \bar{T} : 13

4.66.6 nelda_noee Number of Elections, Executive

Number of executive elections during the year.

Min. Year:2010 Max. Year: 2012
N: 121

Min. Year:1946 Max. Year: 2012
N: 172 n: 2219 \bar{N} : 33 \bar{T} : 13

4.66.7 nelda_noel Number of Elections, Legislative

Number of legislative elections during the year.

Min. Year:2010 Max. Year: 2012
N: 121

Min. Year:1946 Max. Year: 2012
N: 172 n: 2219 \bar{N} : 33 \bar{T} : 13

4.66.8 nelda_oa Was Opposition Allowed

This variable indicates whether at least one opposition political party existed to contest the election. Some countries have multiple government parties but no opposition political party. An opposition party is one that is not in the government, meaning it is not affiliated with the incumbent party in power.

Min. Year:2010 Max. Year: 2012
N: 121

Min. Year:1946 Max. Year: 2012
N: 172 n: 2218 \bar{N} : 33 \bar{T} : 13

4.66.9 nelda_rpae Riots and Protests after Election

If so, a "Yes" is coded. The riots and protests should at least somewhat be related to the handling or outcome of the election.

Min. Year:2010 Max. Year: 2012
N: 120

Min. Year:1946 Max. Year: 2012
N: 172 n: 2214 \bar{N} : 33 \bar{T} : 13

4.66.10 nelda_vcdbe Violence and Civilian Deaths before Election

If there was any significant violence relating to the elections that resulted in civilian deaths, a "yes" is coded. These deaths should be at least plausibly related to the election, though sometimes it is difficult to be certain. Deaths related to civil war that are not intended to influence the election, and are not caused by the election, should not be counted.

Min. Year:2010 Max. Year: 2012
N: 121

Min. Year:1946 Max. Year: 2012

4.67 Pippa Norris

<http://www.hks.harvard.edu/fs/pnorris/Data/Data.htm>
(Norris, 2009)

(Data downloaded: 2016-10-11)

Pippa Norris. 2009. Democracy Time-series Dataset This dataset is in a country-year case format, suitable for cross-national time-series analysis. It contains data on the social, economic and political characteristics of 191 nations with over 600 variables from 1971 to 2007. In particular, it merges the indicators of democracy by Freedom House, Vanhanen, Polity IV, and Cheibub and Gandhi, selected institutional classifications and also socioeconomic indicators. Note that you should check the original code-book for the definition and measurement of each of the variables. The period for each series also varies. This is the replication data-set used in the book, *Driving Democracy*.

4.67.1 no_ce Classification of Executives

Classification of Executives:

1. Parliamentary Monarchy
2. Presidential Republic

4.68 Natural Resource Management Index

<http://sedac.ciesin.columbia.edu/data/collection/nrmi>

(Center for International Earth Science Information Network - CIESIN - Columbia University, 2011)
(Data downloaded: 2016-09-22)

Natural Resource Management Index (NRMI) Data The Natural Resource Management Index (NRMI), 2011 Release is a composite index for 174 countries derived from the average of four proximity-to-target indicators for eco-region protection (weighted average percentage of biomes under protected status), access to improved sanitation, access to improved water and child mortality. The 2011 release of the NRMI includes a consistent time series of NRMI for 2006 to 2011. In addition, the 2011 release includes two new indicators that will eventually supplant the NRMI: a Natural Resource Protection Indicator (NRPI) that is solely composed of the eco-region protection indicator, and a Child Health Indicator (CHI), which is an unweighted average of the proximity-to-target scores for access to water, access to sanitation, and child mortality.

4.68.1 nrmi_ecoprot Ecoregion protection

Eco-Region Protection assesses whether a country is protecting at least 10% of all of its biomes (e.g. deserts, forests, grasslands, aquatic, and tundra). It is designed to capture the comprehensiveness of a government's commitment to habitat preservation and biodiversity protection.

Min. Year:2011 Max. Year: 2011

4.69 Nunn and Puga (2012)

<http://diegopuga.org/data/rugged/>
(Nunn & Puga, 2012)
(Data downloaded: 2016-10-11)

Country Ruggedness and Geographical Data The dataset of terrain ruggedness and other geographical characteristics of countries was created by Nathan Nunn and Diego Puga for their article 'Ruggedness: The blessing of bad geography in Africa', published in the Review of Economics and Statistics 94(1), February 2012: 20-36.

4.69.1 nunn_desert % Desert

The percentage of the land surface area of each country covered by sandy desert, dunes, rocky or lava flows, was calculated on the basis of the desert layer of the Collins Bartholomew World Premium digital map data (Collins Bartholomew, 2005) and the country boundaries described above. This was initially computed as a cruder measure of soil (in)fertility for an early draft of the paper and is no longer used in the final version. Nunn and Puga have left it in the dataset in case it is of use to other researchers.

Min. Year: 2012 Max. Year: 2012

4.69.2 nunn_dist_coast Average distance to nearest ice-free coast (1000 km.)

Average distance to nearest ice-free coast (1000 km). To calculate the average distance to the closest ice-free coast in each country, Nunn and Puga first compute the distance to the nearest ice-free coast for every point in the country in equi-rectangular projection with standard parallels at 30 degrees, on the basis of sea and sea ice area features contained in the fifth edition of the Digital Chart of the World (US National Imagery and Mapping Agency, 2000) and the country boundaries described above. Then Nunn and Puga average this distance across all land in each country not covered by inland water features. Units are thousands of kilometres.

4.69.4 nunn_rugged Ruggedness (Terrain Ruggedness Index, 100 m.)

This is the Terrain Ruggedness Index originally devised by Riley, DeGloria, and Elliot (1999) to quantify topographic heterogeneity in wildlife habitats providing concealment for preys and lookout posts. The source of elevation data is GTOPO30 (US Geological Survey, 1996), a global elevation data set developed through a collaborative international effort led by staff at the US Geological Survey's Center for Earth Resources Observation and Science (EROS). Elevations in GTOPO30 are regularly spaced at 30 arc-seconds across the entire surface of the Earth on a map using a geographic projection, so the sea-level surface distance between two adjacent grid points on a meridian is half a nautical mile or, equivalently, 926 metres. After calculating the Terrain Ruggedness Index for each point on the grid, Nunn and Puga average across all grid cells in the country not covered by water to obtain the average terrain ruggedness of the country's land area. Since the sea-level surface that corresponds to a 30 by 30 arcsecond cell varies in proportion to the cosine of its latitude, when calculating the average terrain ruggedness - or the average of any other variable - for each country, Nunn and Puga assign land to countries - for this and other variables - using digital boundary data based on the fifth edition of the Digital Chart of the World (US National Imagery and Mapping Agency, 2000), which Nunn and Puga have updated to reflect 2000 country boundaries using information from the International Organization for Standardization ISO 3166 Maintenance Agency and other sources. Nunn and Puga exclude areas covered by permanent inland water area features contained in the same edition of the Digital Chart of the World. The units for the terrain ruggedness index correspond to the units used to measure elevation differences. In our calculation, ruggedness is measured in hundreds of metres of elevation difference for grid points 30 arc-seconds (926 metres on the equator or any meridian) apart.

4.69.5 nunn_tropical % Tropical climate

Tropical climate. Using detailed temperature and precipitation data from the Climatic Research Unit of the University of East Anglia and the Global Precipitation Climatology Centre of the German Nunn and Puga's Service, Kottek, Grieser, Beck, Rudolf, and Rubel (2006) classify each cell on a 30 arc-minute grid covering the entire land area of the Earth into one of 31 climates in the widely-used Köppen-Geiger climate classification. Based on these data and the country boundaries described above, Nunn and Puga calculate the percentage of the land surface area of each country that has any of the four Köppen-Geiger tropical climates.

4.70 The Ocean Health Index

<http://www.oceanhealthindex.org>
(Sea Around Us Project, 2015)
(Data downloaded: 2016-09-22)

The Ocean Health Index Data The Ocean Health Index is a valuable tool for the ongoing assessment of ocean health. By providing a means to advance comprehensive ocean policy and compare future progress, the Index can inform decisions about how to use or protect marine ecosystems. The Index is a collaborative effort, made possible through contributions from more than 65 scientists/ocean experts and partnerships between organizations including the National Center for Ecological Analysis and Synthesis, Sea Around Us, Conservation International, National Geographic, and the New England Aquarium. The Index assesses the ocean based on 10 widely-held public goals for a healthy ocean. They are: Food Provision, Artisanal Fishing Opportunities, Natural Products, Carbon Storage, Coastal Protection, Sense of Place, Coastal Livelihoods & Economies, Tourism & Recreation, Clean Waters, Biodiversity.

4.70.1 ohi_ohi The Ocean Health Index

The Ocean Health Index establishes reference points for achieving ten widely accepted socio-ecological objectives, and scores the oceans adjacent to 171 countries and territories on how successfully they deliver these goals. Evaluated globally and by country, these ten public goals represent the wide range of benefits that a healthy ocean can provide; each country's overall score is the average of its respective goal scores. The ten socio-ecological objectives are: Food Provision, Artisanal Fishing Opportunities, Natural Products, Carbon Storage, Coastal Protection, Coastal Livelihoods & Economies, Tourism & Recreation, Sense of Place, Clean Waters, Biodiversity.

<http://www.systemicpeace.org/inscrdata.html>
(Marshall et al., 2015)
(Data downloaded: 2016-09-16)

Polity IV Annual Time-Series, 1800-2015 The Polity project is one of the most widely used data resource for studying regime change and the effects of regime authority. Polity IV Project, Political Regime Characteristics and Transitions, 1800-2014, annual, cross-national, time-series and polity-case formats coding democratic and autocratic "patterns of authority" and regime changes in

all independent countries with total population greater than 500,000 in 2014 (167 countries in 2014). Please note that the codes -99, -88, -77 and -66 has been recoded to missing.

4.71.1 p_autoc Institutionalized Autocracy

Institutionalized Autocracy: "Authoritarian regime" in Western political discourse is a pejorative term for some very diverse kinds of political systems whose common properties are a lack of regularized political competition and concern for political freedoms. Authors use the more neutral term Autocracy and define it operationally in terms of the presence of a distinctive set of political characteristics. In mature form, autocracies sharply restrict or suppress competitive political participation. Their chief executives are chosen in a regularized process of selection within the political elite, and once in office they exercise power with few institutional constraints. Most modern autocracies also exercise a high degree of directiveness over social and economic activity, but authors regard this as a function of political ideology and choice, not a defining property of autocracy. Social democracies also exercise relatively high degrees of directiveness. Authors prefer to leave open for empirical investigation the question of how Autocracy, Democracy, and Directiveness (performance) have covaried over time.

An eleven-point Autocracy scale is constructed additively. This operational indicator of autocracy is derived from codings of the competitiveness of political participation (variable p_parcomp), the regulation of participation (variable p_parreg), the openness and competitiveness of executive recruitment (variables p_xropen and p_xrcomp), and constraints on the chief executive (variable p_xconst).

Min. Year:2010 Max. Year: 2014
N: 164

Min. Year:1946 Max. Year: 2015
N: 181 n: 8917 \bar{N} : 127 \bar{T} : 49

4.71.2 p_democ Institutionalized Democracy

Institutionalized Democracy: Democracy is conceived as three essential, interdependent elements. One is the presence of institutions and procedures through which citizens can express effective preferences about alternative policies and leaders. Second is the existence of institutionalized constraints on the exercise of power by the executive. Third is the guarantee of civil liberties to all citizens in their daily lives and in acts of political participation. Other aspects of plural democracy, such as the rule of law, systems of checks and balances, freedom of the press, and so on are means to, or specific manifestations of, these general principles. Authors do not include coded data on civil liberties.

The Democracy indicator is an additive eleven-point scale (0-10). The operational indicator of democracy is derived from coding of the competitiveness of political participation (variable p_parcomp), the openness and competitiveness of executive recruitment (variables p_xropen and p_xrcomp), and constraints on the chief executive (variable p_xconst).

4.71.3 p_durable Regime Durability

Regime Durability: The number of years since the most recent regime change (defined by a three point change in the p_polity score over a period of three years or less) or the end of transition period

defined by the lack of stable political institutions (denoted by a standardized authority score). In calculating the `p_durable` value, the first year during which a new (post-change) polity is established is coded as the baseline "year zero" (value = 0) and each subsequent year adds one to the value of the `p_durable` variable consecutively until a new regime change or transition period occurs

Min. Year:2013 Max. Year: 2013
N: 166

Min. Year:1946 Max. Year: 2015
N: 182 n: 9285 \bar{N} : 133 \bar{T} : 51

4.71.4 `p_flag` Tentative Coding

Tentative Coding: Trichotomous "flag" variable indicating confidence of codings (recent year codings only).

- 0. Confident: Reasonably confident coding of established authority patterns that have been "artificially smoothed" to present consistency over time between substantive polity changes.
- 1. Tentative: Reasonably confident coding of emerging authority patterns that have not been smoothed over time; these codes are "free floating," that is, they are based on information available in the case-year and are not tied to prior year coding(s). Codes are considered tentative for up to five years following a substantive polity change.
- 2. Tenuous: Best judgment coding based on limited information and/or insufficient time span since a substantive polity change and the emergence of new authority patterns.

Min. Year:2013 Max. Year: 2013
N: 166

Min. Year:1946 Max. Year: 2015
N: 182 n: 9314 \bar{N} : 133 \bar{T} : 51

4.71.5 `p_fragment` Polity Fragmentation

Polity Fragmentation: This variable codes the operational existence of a separate polity, or polities, comprising substantial territory and population within the recognized borders of the state and over which the coded polity exercises no effective authority (effective authority may be participatory or coercive). Local autonomy arrangements voluntarily established and accepted by both central and local authorities are not considered fragmentation. A polity that cannot exercise effective authority over at least 50 percent of its established territory is necessarily considered to be in a condition of "state failure" (i.e., interruption or interregnum, see below, or civil war). Polity fragmentation may result from open warfare (active or latent) or foreign occupation and may continue in the absence of open warfare if a situation of de facto separation remains unresolved and unchallenged by the state.

- 0. No overt fragmentation.
- 1. Slight fragmentation: Less than ten percent of the country's territory is effectively under local authority and actively separated from the central authority of the regime.
- 2. Moderate fragmentation: Ten to twenty-five percent of the country's territory is effectively ruled by local authority and actively separated from the central authority of the regime.
- 3. Serious fragmentation: Over twenty-five percent (and up to fifty percent) of the country's territory is effectively ruled by local authority and actively separated from the central authority of the regime.

Min. Year:2013 Max. Year: 2013

Min. Year:1976 Max. Year: 2015
N: 168 n: 2705 \bar{N} : 68 \bar{T} : 16

4.71.6 p_parcomp The Competitiveness of Participation

The Competitiveness of Participation: The competitiveness of participation refers to the extent to which alternative preferences for policy and leadership can be pursued in the political arena. Political competition implies a significant degree of civil interaction, so polities which are coded Unregulated ("1") on Regulation of Participation are coded "0" (Not Applicable) for competitiveness. Competitiveness is coded on a five category scale:

0. Not Applicable: This is used for polities that are coded as Unregulated, or moving to/from that position, in Regulation of Political Participation (variable p_parreg).

1. Repressed: No significant oppositional activity is permitted outside the ranks of the regime and ruling party. Totalitarian party systems, authoritarian military dictatorships, and despotic monarchies are typically coded here. However, the mere existence of these structures is not sufficient for a Repressed coding. The regime's institutional structure must also be matched by its demonstrated ability to repress oppositional competition.

2. Suppressed: Some organized, political competition occurs outside government, without serious factionalism; but the regime systematically and sharply limits its form, extent, or both in ways that exclude substantial groups (20% or more of the adult population) from participation. Suppressed competition is distinguished from Factional competition (below) by the systematic, persisting nature of the restrictions: large classes of people, groups, or types of peaceful political competition are continuously excluded from the political process. As an operational rule, the banning of a political party which received more than 10% of the vote in a recent national election is sufficient evidence that competition is "sup-pressed." However, other information is required to determine whether the appropriate coding is (2) Suppressed or (3) Factional competition. This category is also used to characterize transitions between Factional and Repressed competition. Examples of "suppression" are:

- i. Prohibiting some kinds of political organizations, either by type or group of people involved (e.g., no national political parties or no ethnic political organizations).
- ii. Prohibiting some kinds of political action (e.g., Communist parties may organize but are prohibited from competing in elections).
- iii. Systematic harassment of political opposition (leaders killed, jailed, or sent into exile; candidates regularly ruled off ballots; opposition media banned, etc.). This is evidence for Factional, Suppressed, or Repressed, depending on the nature of the regime, the opposition, and the persistence of political groups.

3. Factional: Polities with parochial or ethnic-based political factions that regularly compete for political influence in order to promote particularistic agendas and favor group members to the detriment of common, secular, or cross-cutting agendas.

4. Transitional: Any transitional arrangement from Restricted or Factional patterns to fully competitive patterns, or vice versa. Transitional arrangements are accommodative of competing, parochial interests but have not fully linked parochial with broader, general interests. Sectarian and secular interest groups coexist.

5. Competitive: There are relatively stable and enduring, secular political groups which regularly compete for political influence at the national level; ruling groups and coalitions regularly, voluntarily transfer central power to competing groups. Competition among groups seldom involves coercion or disruption. Small parties or political groups may be restricted in the Competitive pattern.

Min. Year:2010 Max. Year: 2014
N: 164

Min. Year:1946 Max. Year: 2015
N: 181 n: 8917 \bar{N} : 127 \bar{T} : 49

4.71.7 p_parreg Regulation of Participation

Regulation of Participation: Participation is regulated to the extent that there are binding rules on when, whether, and how political preferences are expressed. One-party states and Western democracies both regulate participation but they do so in different ways; the former by channeling participation through a single party structure, with sharp limits on diversity of opinion, and the latter by allowing relatively stable and enduring groups to compete nonviolently for political influence. The polar opposite is unregulated participation, in which there are no enduring national political organizations and no effective regime controls on political activity. In such situations political competition is fluid and often characterized by recurring coercion among shifting coalitions of partisan groups. A five-category scale is used to code this dimension:

1. Unregulated: Political participation is fluid; there are no enduring national political organizations and no systematic regime controls on political activity. Political groupings tend to form around particular leaders, regional interests, religious or ethnic or clan groups, etc.; but the number and relative importance of such groups in national political life varies substantially over time.
2. Multiple Identities: There are relatively stable and enduring political groups which compete for political influence at the national level - parties, regional groups, or ethnic groups, not necessarily elected - but there are few recognized, overlapping (common) interests.
3. Sectarian: Political demands are characterized by incompatible interests and intransigent posturing among multiple identity groups and oscillate more or less regularly between intense factionalism and government favoritism, that is, when one identity group secures central power it favors group members in central allocations and restricts competing groups' political activities, until it is displaced in turn (i.e., active factionalism). Also coded here are polities in which political groups are based on restricted membership and significant portions of the population historically have been excluded from access to positions of power (latent factionalism, e.g., indigenous peoples in some South American countries).
4. Restricted: Some organized political participation is permitted without intense factionalism, but significant groups, issues, and/or types of conventional participation are regularly excluded from the political process.
5. Regulated: Relatively stable and enduring political groups regularly compete for political influence and positions with little use of coercion. No significant groups, issues, or types of conventional political action are regularly excluded from the political process.

Min. Year:2010 Max. Year: 2014
N: 164

Min. Year:1946 Max. Year: 2015
N: 181 n: 8917 \bar{N} : 127 \bar{T} : 49

4.71.8 p_polity Combined Polity Score

Combined Polity Score: The polity score is computed by subtracting the p_autoc score from the p_democ score; the resulting unified polity scale ranges from +10 (strongly democratic) to -10 (strongly autocratic)

Min. Year:2010 Max. Year: 2014
N: 164

Min. Year:1946 Max. Year: 2015
N: 181 n: 8917 \bar{N} : 127 \bar{T} : 49

4.71.9 p_polity2 Revised Combined Polity Score

Revised Combined Polity Score: The polity score is computed by subtracting the p_autoc score from the p_democ score; the resulting unified polity scale ranges from +10 (strongly democratic) to -10 (strongly autocratic). The revised version of the polity variable is designed to facilitate the use of the polity regime measure in time-series analyses. It modifies the combined annual polity score by applying a simple treatment, or "fix" to convert instances of "standardized authority scores" (i.e., -66, -77, and -88) to conventional polity scores (i.e., within the range, -10 to +10). The values have been converted according to the following rule set:

- (-66) Cases of foreign "interruption" are treated as "system missing."
- (-77) Cases of "interregnum," or anarchy, are converted to a "neutral" Polity score of "0."
- (-88) Cases of "transition" are prorated across the span of the transition.

For example, country X has a p_polity score of -7 in 1957, followed by three years of -88 and, finally, a score of +5 in 1961. The change (+12) would be prorated over the intervening three years at a rate of per year, so that the converted scores would be as follow: 1957 -7; 1958 -4; 1959 -1; 1960 +2; and 1961 +5.

Note: Ongoing (-88) transitions in the most recent year are converted to "system missing" values. Transitions (-88) following a year of independence, interruption (-66), or interregnum (-77) are prorated from the value "0".

Min. Year:2013 Max. Year: 2014
N: 165

N: 182 n: 9214 \bar{N} : 132 \bar{T} : 51

4.71.10 p_sf State Failure

State Failure: Variable p_sf is a flag variable that designates (by code "1") every year during which a Polity is considered to be in a condition of "complete collapse of central authority" or "state failure" (i.e., -77). The variable p_sf is also coded "1" for years when a state disintegrates and when a profound revolutionary change in political authority occurs (during which the authority of the previous Polity is assumed to have collapsed completely prior to the revolutionary seizure of power and subsequent restructuring of authority). Using the p_sf variable to select regime information will facilitate identification of periods of state failure.

Min. Year:1949 Max. Year: 2015
N: 39 n: 174 \bar{N} : 3 \bar{T} : 4

4.71.11 p_xconst Executive Constraints (Decision Rules)

Executive Constraints (Decision Rules): According to Eckstein and Gurr, decision rules are defined in the following manner: "Superordinate structures in action make decisions concerning the direction of social units. Making such decisions requires that supers and subs be able to recognize when decision-processes have been concluded, especially "properly" concluded. An indispensable ingredient of the processes, there-fore, is the existence of Decision Rules that provide basic criteria under which decisions are considered to have been taken." (Eckstein and Gurr 1975, p.121) Operationally, this variable refers to the extent of institutionalized constraints on the decision-making powers of chief executives, whether individuals or collectivities. Such limitations may be imposed by any "accountability groups". In Western democracies these are usually legislatures. Other kinds of accountability groups are the ruling party in a one-party state; councils of nobles or powerful advisors in monarchies; the military in coup-prone polities; and in many states a strong, independent judiciary. The concern is therefore with the checks and balances between the various parts of the decision-making process. A seven-category scale is used.

1. Unlimited Authority: There are no regular limitations on the executive's actions (as distinct from irregular limitations such as the threat or actuality of coups and assassinations). Examples of evidence:

i. Constitutional restrictions on executive action are ignored. ii. Constitution is frequently revised or suspended at the executive's initiative. iii. There is no legislative assembly, or there is one but it is called and dismissed at the ex-ecutive's pleasure. iv. The executive appoints a majority of members of any accountability group and can re-move them at will. v. The legislature cannot initiate legislation or veto or suspend acts of the executive. vi. Rule by decree is repeatedly used.

Note: If the executive is given limited or unlimited power by a legislature to cope with an emergency and relents this power after the emergency has passed, this is not a change to unlimited authority.

2. Intermediate Category

3. Slight to Moderate Limitation on Executive Authority: There are some real but limited restraints on the executive. Evidence: i. The legislature initiates some categories of legislation. ii. The legislature blocks implementation of executive acts and decrees. iii. Attempts by the executive to change some constitutional restrictions, such as prohibitions on succeeding himself, or extending his term, fail and are not adopted. iv. The ruling party initiates some legislation or takes some administrative action independently of the executive. v. The legislature or party approves some categories of appointments nominated by the executive. vi. There is an independent judiciary. vii. Situations in which there exists a civilian executive, but in which policy decisions, for all practical purposes, reflect the demands of the military.

4. Intermediate Category

5. Substantial Limitations on Executive Authority: The executive has more effective authority than any accountability group but is subject to substantial constraints by them. Examples: i. A legislature or party council often modifies or defeats executive proposals for action. ii. A council or legislature sometimes refuses funds to the executive. iii. The accountability group makes important appointments to administrative posts. iv. The legislature refuses the executive permission to leave the country.

6. Intermediate Category

7. Executive Parity or Subordination: Accountability groups have effective authority equal to or greater than the executive in most areas of activity. Examples of evidence: i. A legislature, ruling party, or council of nobles initiates much or most important legislation. ii. The executive (president, premier, king, cabinet, council) is chosen by the accountability group and is dependent on its continued support to remain in office (as in most parliamentary systems). iii. In multi-party democracies, there is chronic "cabinet instability".

Min. Year:2010 Max. Year: 2014
N: 164

Min. Year:1946 Max. Year: 2015
N: 181 n: 8917 \bar{N} : 127 \bar{T} : 49

4.71.12 p_xrcomp Competitiveness of Executive Recruitment

Competitiveness of Executive Recruitment: Competitiveness refers to "the extent that prevailing modes of advancement give subordinates equal opportunities to become superordinates (Gurr 1974, p.1483)." For example, selection of chief executives through popular elections involving two or more viable parties or candidates is regarded as competitive. If power transfers are coded Unregulated ("1") in the Regulation of Executive Recruitment (variable p_xrreg), or involve a transition to/from unregulated, Competitiveness is coded "0" (Not Applicable). Four categories are used to measure this concept:

0. Not Applicable: This is used for polities that are coded as Unregulated, or moving to/from that position, in Regulation of Chief Executive Recruitment (variable p_xrreg).
1. Selection: Chief executives are determined by hereditary succession, designation, or by a combination of both, as in monarchies whose chief minister is chosen by king or court. Examples of pure designative selection are: rigged, unopposed elections; repeated replacement of presidents before their terms end; recurrent military selection of civilian executives; selection within an institutionalized single party; recurrent incumbent selection of successors; repeated election boycotts by the major opposition parties, etc.
2. Dual/Transitional: Dual executives in which one is chosen by hereditary succession, the other by competitive election. Also used for transitional arrangements between selection (ascription and/or designation) and competitive election.
3. Election: Chief executives are typically chosen in or through competitive elections involving two or more major parties or candidates. (Elections may be popular or by an elected assembly).

Min. Year:2010 Max. Year: 2014
N: 164

Min. Year:1946 Max. Year: 2015
N: 181 n: 8917 \bar{N} : 127 \bar{T} : 49

4.71.13 p_xropen Openness of Executive Recruitment

Openness of Executive Recruitment: Recruitment of the chief executive is "open" to the extent that all the politically active population has an opportunity, in principle, to attain the position through a regularized process. If power transfers are coded Unregulated (1) in the Regulation of Executive Recruitment (p_xrreg), or involve a transition to/from Unregulated, Openness is coded "0" (Not Applicable). Five categories are used:

0. Not Applicable: This is used for polities that are coded as Unregulated, or moving to/from that position, in Regulation of Chief Executive Recruitment (variable p_xrreg).
1. Closed: Chief executives are determined by hereditary succession, e.g. kings, emperors, beys, emirs, etc., who assume executive powers by right of descent. An executive selected by other means may proclaim himself a monarch but the polity he governs is not coded "closed" unless a relative actually succeeds him as ruler.
2. Dual Executive-Designation: Hereditary succession plus executive or court selection of an effective chief minister.

3. Dual Executive-Election: Hereditary succession plus electoral selection of an effective chief minister.
4. Open: Chief executives are chosen by elite designation, competitive election, or transitional arrangements between designation and election.

N: 164

Min. Year:1946 Max. Year: 2015
N: 181 n: 8917 \bar{N} : 127 \bar{T} : 49

4.71.14 p_xrreg Regulation of Chief Executive Recruitment

Regulation of Chief Executive Recruitment: In considering recruitment, we must first determine whether there are any established modes at all by which chief executives are selected. Regulation refers to the extent to which a polity has institutionalized procedures for transferring executive power. Three categories are used to differentiate the extent of institutionalization:

1. Unregulated: Changes in chief executive occur through forceful seizures of power. Such caesaristic transfers of power are sometimes legitimized after the fact in noncompetitive elections or by legislative enactment. Despite these "legitimization" techniques, a polity remains unregulated until the de facto leader of the coup has been replaced as head of government either by designative or competitive modes of executive selection. However, unregulated recruitment does not include the occasional forceful ouster of a chief executive if elections are called within a reasonable time and the previous pattern continues.
2. Designational/Transitional: Chief executives are chosen by designation within the political elite, without formal competition (i.e., one-party systems or "rigged" multiparty elections). Also coded here are transitional arrangements intended to regularize future power transitions after an initial unregulated seizure of power (i.e., after constitutional legitimization of military rule or during periods when the leader of the coup steps down as head of state but retains unrivaled power within the political realm as head of the military). This category also includes polities in transition from designative to elective modes of executive selection (i.e., the period of "guided democracy" often exhibited during the transition from military to civilian rule) or vice versa (i.e., regimes ensuring electoral victory through the intimidation of oppositional leaders or the promulgation of a "state of emergency" before executive elections).
3. Regulated: Chief executives are determined by hereditary succession or in competitive elections. Ascriptive/designative and ascriptive/elective selections (i.e., an effective king and premier) are also coded as regulated. The fundamental difference between regulated selection and unregulated recruitment is that regulated structures require the existence of institutionalized modes of executive recruitment, either through constitutional decree or lineage. Moreover, in regulated competitive systems, unlike the designational/transitional mode, the method of future executive selection is not dependent on the particular party or regime currently holding power.

Electoral Integrity Project (Version 3.5) A global expert survey on Perceptions of Electoral Integrity (PEI). This study is conducted by Pippa Norris, Ferran Martínez i Coma and Richard W. Frank for the Electoral Integrity Project based at the Universities of Sydney and Harvard. The PEI asks experts to evaluate electoral integrity.

The concept of electoral integrity refers to international standards and global norms governing the appropriate conduct of elections. These standards have been endorsed in a series of authoritative conventions, treaties, protocols, and guidelines by agencies of the international community, notably by the decisions of the UN General Assembly, by regional bodies such as the Organization for Security and Cooperation in Europe (OSCE), the Organization of American States (OAS), and the African Union (AU), and by member states in the United Nations. Following endorsement, these standards apply universally to all countries throughout the electoral cycle, including during the pre-electoral period, the campaign, on polling day, and in its aftermath.

To operationalize this notion, the PEI asks experts to evaluate elections using 49 indicators, grouped into eleven categories reflecting the whole electoral cycle. The dataset also includes a summary 100-point PEI Index based on summing all 49 indicators. The PEI index provides one way to summarize the overall integrity of the election. Alternatively, analysts can examine indices for each of the eleven dimensions, or use the disaggregated scores for each of the 49 individual indicators. In this way, data can be reaggregated flexibly to construct any measure which is preferred conceptually. The PEI dataset is designed to provide a comprehensive, systematic and reliable way to monitor the quality of elections worldwide. The third release of the dataset (PEI_3) included 2012 and 2013 cases and expands the comparison by including all national elections held from January 1st to December 31st 2014. In total PEI_3 included expert evaluations of 127 elections held in 107 countries. In addition, in 2014 elections in Haiti, Lebanon, and Comoros were delayed or suspended. Those are thus not included in the dataset. The election in Thailand was held and later annulled. Results are included in the data release.

4.72.1 pei_eir Electoral Integrity Rating

Overall how would you rate the integrity of this election on a scale from 1 (very poor) to 10 (very good)?

Min. Year: 2015 Max. Year: 2015
N: 117

Variable not included
in Time-Series Data

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.72.2 pei_eirhci Electoral Integrity Rating, Higher C.I.

The higher bound of the 95% confidence interval for either the election or the country level.

Min. Year: 2015 Max. Year: 2015
N: 117

Variable not included
in Time-Series Data

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.72.3 pei_eirlci Electoral Integrity Rating, Lower C.I.

The lower bound of the 95% confidence interval for either the election or the country level.

Min. Year: 2015 Max. Year: 2015
N: 117

Variable not included
in Time-Series Data

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.72.4 pei_off Elected Office

What government body was this election for?

1. Legislative
2. Presidential
3. Both

Min. Year: 2015 Max. Year: 2015
N: 125

Variable not included
in Time-Series Data

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.72.5 pei_peii Perception of Electoral Integrity Index

The PEI index is designed to provide an overall summary evaluation of expert perceptions that an election meets international standards and global norms. It is generated at the individual level using experts' answers to the 49 substantive variables below. Therefore, an Index score is missing if an expert does not answer a question. The 49 scores are summed and then standardized to a 100 point scale.

Min. Year: 2015 Max. Year: 2015
N: 96

Variable not included
in Time-Series Data

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.72.6 pei_peiihci Perception of Electoral Integrity Index, Higher C.I.

The higher bound of the 95% confidence interval for either the election or the country level.

Min. Year: 2015 Max. Year: 2015

4.73 Persson & Tabellini

<http://didattica.unibocconi.eu/myigier/index.php?IdUte=48805&idr=4273&lingua=eng&comando=Apri>

(Persson & Tabellini, 2005)

(Data downloaded: 2016-09-28)

The Economic Effects of Constitutions Persson and Tabellini only include countries of democratic rule in their sample. To be included in the cross-section, an average of the Freedom House indices for civil liberties and political rights (fh_cl and fh_pr) lower than an average of 5 for the 1990-1998 period is required. For the 1960-1998 panel data, Persson and Tabellini include country-years that obtain a score greater than zero on the Polity democracy indicator (p_polity2) (For details, see Persson and Tabellini 2003, 74-77).

4.73.1 pt_federal Federal Political Structure

Dummy variable:

1. If the country has a federal political structure
0. Otherwise

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1960 Max. Year: 1998
N: 63 n: 2185 \bar{N} : 56 \bar{T} : 35

4.73.2 pt_maj Majoritarian Electoral Systems

Dummy variable:

1. The lower house is selected under plurality rule
0. Otherwise.

Only legislative elections (lower house) are considered.

Variable not included
in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1960 Max. Year: 1998
N: 63 n: 2117 \bar{N} : 54 \bar{T} : 34

4.73.3 pt_pres Forms of Government

Dummy variable:

1. For presidential regimes
0. Otherwise.

Only regimes in which the confidence of the assembly is not necessary for the executive to stay in power (even if an elected president is not the chief executive, or if there is no elected president) are included among presidential regimes. Most semi-presidential and premier-presidential systems are classified as parliamentary.

Variable not included
in Cross-Section Data

(Feenstra et al., 2015)
(Data downloaded: 2016-10-11)

Penn World Table PWT version 9.0 is a database with information on relative levels of income, output, inputs and productivity, covering 182 countries between 1950 and 2014. In Penn World Table the users are offered two different series of data for China. "China Version 1" uses the official growth rates for the whole period. "China Version 2" uses the recent modifications of official Chinese growth rates. We have chosen to include China Version 1.

4.75 Dahlstrom et al.

<http://www.qog.pol.gu.se/data/datadownloads/qogexpertsurveydata/>
(Dahlstrom et al., 2015)
(Data downloaded: 2016-09-08)

The QoG Expert-Survey The QoG Survey is a data set on the structure and behavior of public administration, based on a web survey. The dataset covers key dimensions of quality of government, such as politicization, professionalization, openness, and impartiality.

Included in the QoG dataset are three indexes, each based on a group of questions from the survey. When constructing the indexes authors excluded countries with less than three responding experts.

The confidence interval variables give the higher and lower limits of the 95% confidence interval.

4.75.1 qs_closed Closed Public Administration

Closed Public Administration: The index measures to what extent the public administration is more closed or public-like, rather than open or private-like. Higher values indicate a more closed public administration. It is based on three questions from the survey. The index is constructed by first taking the mean for each responding expert of the three questions above. The value for each country is then calculated as the mean of all the experts' means. (If one or more answers are missing, these questions are ignored when calculating the mean value for each expert).

in Time-Series Data

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.75.4 qs_impar Impartial Public Administration

Impartial Public Administration: The index measures to what extent government institutions exercise their power impartially. The impartiality norm is defined as: "When implementing laws and policies, government officials shall not take into consideration anything about the citizen/case that is not beforehand stipulated in the policy or the law."

The index is constructed by adding each measure weighted by the factor loading obtained from a principle components factor analysis. Missing values on one or more of the questions have been imputed on the individual expert level. After that, aggregation to the country level has been made (mean value of all experts per country).

 \bar{T} : N/A

4.75.7 qs_proff Professional Public Administration

Professional Public Administration: The index measures to what extent the public administration is professional rather than politicized. Higher values indicate a more professionalized public administration. It is based on four questions from the survey.

The index is constructed by first taking the mean for each responding expert of the four questions above. The value for each country is then calculated as the mean of all the experts' means. (If one or more answers are missing, these questions are ignored when calculating the mean value for each expert. The scales of the second and third questions are reversed so that higher values indicate more professionalism).

4.77 Michael L Ross

<https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10.7910/DVN/ZTPW0Y>
(Ross & Mahdavi, 2015)
(Data downloaded: 2016-10-11)

Oil and Gas Data, 1932-2014 Global dataset of oil and natural gas production, prices, exports, and net exports. These data are based on the best available information about the volume and value of oil and natural gas production in all countries from 1932 to 2014. The volume figures are from the documents listed in original source; to calculate the total value of production, author multiply the volume by the world price for oil or gas. Since these are world prices for a single (benchmark) type of oil/gas, they only approximate the actual price - which varies by country according to the quality, the terms of contracts, the timing of the transactions, and other factors. These figures do not tell how much revenues were collected by governments or companies - only the approximate volume and value of production. Data on oil production from 1946 to 1969, and gas production from 1955 (when it first was reported) to 1969, are from the US Geological Survey Minerals Yearbook, for various years.

4.78 Reporters Sans Frontières

<http://en.rsf.org/>
(Reporters Without Borders, 2016)
(Data downloaded: 2015-11-27)

Press Freedom The Reporters Without Borders World Press Freedom Index ranks the performance of 180 countries according to a range of criteria that include media pluralism and independence, respect for the safety and freedom of journalists, and the legislative, institutional and infrastructural environment in which the media operate.

4.78.1 rsf_pfi Press Freedom Index

The Press Freedom index measures the amount of freedom journalists and the media have in each country and the efforts made by governments to see that press freedom is respected. It does not take account of all human rights violations, only those that affect press freedom. Neither is it an indicator of the quality of a country's media.

Note: With the exception of the year 2012 the index ranges between 0 (total press freedom) and 100 (no press freedom). However for the 2012 data release RSF changed the scale so that negative values can be and indeed are assigned to countries with more press freedom. We have decided leave the data as is.

4.79 Putterman (2007)

http://www.brown.edu/Departments/Economics/Faculty/Louis_Putterman/antiquity%20index.htm

(Putterman, 2007)

(Data downloaded: 2016-10-11)

State Antiquity Index The index used by Bockstette et al. was constructed as follows. They began by dividing the period from 1 to 1950 C.E. into 39 half centuries. Years before 1 C.E. were ignored on grounds that the experience of more than 2000 years ago would be unlikely to have much effect today, and in order to avoid low-return research effort using low quality information. For each period of fifty years, they asked three questions (and allocated points) as follows:

1. Is there a government above the tribal level? (1 point if yes, 0 points if no)
2. Is this government foreign or locally based? (1 point if locally based, 0.5 points if foreign [i.e., the country is a colony], 0.75 if in between [a local government with substantial foreign oversight])
3. How much of the territory of the modern country was ruled by this government? (1 point if over 50%, 0.75 points if between 25% and 50%, 0.5 points if between 10% and 25%, 0.3 points if less than 10%).

To combine the data of the 39 periods, Bockstette et al. tried alternative rates for discounting the influence of the past, ranging from 0 to a discount of 50% for each half century.

4.80 Sea Around Us Project

<http://www.seaaroundus.org/data/#/marine-trophic-index>
(Pauly & Zeller, 2016)
(Data downloaded: 2016-10-24)

Sea Around Us Project Data The Sea Around Us Project is a scientific collaboration between the University of British Columbia and the Pew Environment Group that began in July 1999. The aims of the project are to provide an integrated analysis of the impacts of fisheries on marine ecosystems, and to devise policies that can mitigate and reverse harmful trends whilst ensuring the social and economic benefits of sustainable fisheries. The Sea Around Us has assembled global databases of catches, distribution of commercial marine species, countries fishing access agreements, ex-vessel prices, marine protected areas and other data-all available online.

4.80.1 sau_mti Marine Trophic Index

The Marine Trophic Index is an index of marine biodiversity. Note: The data for the following countries has been set to missing due to the fact that they have several data observations (in parentheses) in the original data: USA (Alaska, East Coast, Gulf of Mexico, West Coast, Hawaii Main Islands and Hawaii Northwest Islands), Turkey (Black sea, Mediterranean Sea), Indonesia (Eastern, Western), Malaysia (Peninsula East, Peninsula West, Sabah, Sarawak), Russia (Baltic Sea (Kaliningrad)), Baltic Sea (St. Petersburg), Barents Sea, Black Sea, Pacific, Siberia), Japan (Main Islands, Outer Islands), Saudi Arabia (Persian Gulf, Red Sea) etc. The countries that have mainland and islands, only index of mainland included as an index for the specific country (e.x. Brazil).

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.9 scip_abestw1f Accident, first week gross benefit, family APW

Accident, first week gross benefit, family APW. Standard amount of average weekly gross benefit paid to familied worker in first week of work accident spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.10 scip_abestw1s Accident, first week gross benefit, single APW

Accident, first week gross benefit, single APW. Standard amount of gross benefit paid to single worker in first week of work accident spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.11 scip_abetesw26f Accident, 26 weeks average gross benefit, family APW

Accident, 26 weeks average gross benefit, family APW. Standard amount of average weekly gross familied worker benefit over 26-week work accident spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.12 scip_ abesw26s Accident, 26 weeks average gross benefit, single APW

Accident, 26 weeks average gross benefit, single APW. Standard amount of average weekly gross single worker benefit over 26-week work accident spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.13 scip_ accfanet Accident net benefit 26w + APWW 26w, family

Accident net benefit 26w + APWW 26w, family. Net income for a family with one wage earner with 26-weeks of APW and 26-weeks with work accident insurance benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.14 scip_ accsinet Accident net benefit 26w + APWW 26w, single

Accident net benefit 26w + APWW 26w, single. Net income for single person with 26-weeks of APW and 26-weeks with work accident insurance benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.15 scip_ acontper Accident, contribution period

Accident, contribution period. Amount of weeks of contribution required to qualify for benefit, made in course of reference period.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 215 \bar{N} : 4 \bar{T} : 11

4.82.16 scip_acovratl Accident, labour force coverage rate

Accident, labour force coverage rate. Coverage ratio as proportion of labour force (scip_anoinsur / scip_alabforc).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.17 scip_aduratio Accident, duration

Accident, duration. Amount of weeks during which sickness benefit is payable to single industrial worker with work record as detailed in general information (indefinite duration maximised at 156 weeks, or three years).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.18 scip_afinempr Accident, financing by employer

Accident, financing by employer. Total proportion of insurance fund receipts derived from employer contributions.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.19 scip_afininsr Accident, financing by insured

Accident, financing by insured. Total proportion of insurance fund receipts derived from contributions by the individuals insured.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.20 scip_afinstat Accident, financing by state

Accident, financing by state. Total proportion of insurance fund receipts derived from state general revenue.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.21 scip_agapweek Gross APW weekly wage

Gross APW weekly wage. Gross average industrial production worker's wage per week.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.22 scip_ainceil Accident, income ceiling

Accident, income ceiling. Maximum annual income which workers may earn and still be qualified for benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 215 \bar{N} : 4 \bar{T} : 11

4.82.23 scip_alabforc Number in labour force

Number in labour force. Number in labour force (in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.24 scip_ameantst Accident, means-test

Accident, means-test. Dummy variable indicating whether individual and/or household means test is applied to determine male worker's qualification for benefit.

- 1. Means test
- 0. None

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 215 \bar{N} : 4 \bar{T} : 11

4.82.25 scip_anoinsur Accident, number of insured

Accident, number of insured. Total number of people formally entitled to work accident insurance benefits (in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 215 \bar{N} : 4 \bar{T} : 11

4.82.26 scip_atatfulf Accident, Full gross RR (26w), family

Accident, Full gross RR (26w), family. Full gross replacement rate, familied worker (scip_atatminf / scip_scip_agapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.27 scip_atatfuls Accident, Full gross RR (26w), single worker

Accident, Full gross RR (26w), single worker. Full gross replacement rate, single worker (scip_abenfuls / scip_scip_agapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.28 scip_aratmaxf Accident, Maximum gross RR (26w), family

Accident, Maximum gross RR (26w), family. Maximum gross replacement rate, familied worker (scip_aratmaxf / scip_scip_agapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.29 scip_aratmaxs Accident, Maximum gross RR (26w), single worker

Accident, Maximum gross RR (26w), single worker. Maximum gross replacement rate, single worker (scip_abenmaxs /scip_scip_agapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.30 scip_aratminf Accident, Minimum gross RR (26w), family

Accident, Minimum gross RR (26w), family. Minimum gross replacement rate, familied worker (scip_abenminf / scip_scip_agapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.31 scip_aratmins Accident, Minimum gross RR (26w), single worker

Accident, Minimum gross RR (26w), single worker. Minimum gross replacement rate, single worker (scip_abenmins/scip_scip_agapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.32 scip_ arefrper Accident, reference period

Accident, reference period. Amount of weeks within which contribution record must have been fulfilled in order to qualify for benefit.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 215 \bar{N} : 4 \bar{T} : 11

4.82.33 scip_ artstw1f Accident, gross first week RR, family APW

Accident, gross first week RR, family APW. Standard gross first week replacement rate, familial worker (scip_ abestw1f / scip_ scip_ agapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.34 scip_ artstw1s Accident, gross first week RR, single APW

Accident, gross first week RR, single APW. Standard gross first week replacement rate, single worker (scip_ abestw1s / scip_ scip_ agapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.35 scip_ artsw26f Accident, gross 26-week RR, family APW

Accident, gross 26-week RR, family APW. Standard gross 26-week replacement rate, familial worker (scip_ abesw26f / scip_ agapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.36 scip_artsw26s Accident, gross 26-week RR, single APW

Accident, gross 26-week RR, single APW. Standard gross 26-week replacement rate, single worker ($\text{scip_scip_abesw26s} / \text{scip_agapweek}$).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.37 scip_awaiting Accident, waiting days

Accident, waiting days. Number of legislated administrative "waiting days" of sickness at beginning of work accident spell when no benefits are paid out.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.38 scip_az2indf Accident, net APW RR average 1 and 26 weeks, family

Accident, net APW RR average 1 and 26 weeks, family. $(\text{scip_a1stnerf} + \text{scip_azrr26fa}) / 2$. Average of two components: a four-person family, first week after waiting days and 26 weeks with benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.39 scip_az2inds Accident, net APW RR average 1 and 26 weeks, single

Accident, net APW RR average 1 and 26 weeks, single. $(\text{scip_a1stners} + \text{scip_azrr26si}) / 2$. Average of two components: a single person, first week after waiting days and 26 weeks with benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.40 scip_az4ind Accident, net RR average 1 and 26 weeks

Accident, net APW RR average 1 and 26 weeks. $(scip_alstners + scip_alstnerf + scip_azrr26si + scip_azrr26fa) / 4$. Average of four components: a single person and a four-person family, for first week after waiting days and 26 weeks with benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.41 scip_azrr26fa Accident, 26 weeks net RR, family

Accident, 26 weeks net APW RR exclusive, family. Standard net familial worker replacement rate for total 26-week period of work accident benefit, excluding prior half-year's wage income from numerator and denominator.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.42 scip_azrr26si Accident, 26 weeks net RR, single

Accident, 26 weeks net APW RR exclusive, single. Standard net single worker replacement rate for total 26-week period of work accident benefit, excluding prior half-year's wage income from numerator and denominator.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.43 scip_employees Number of employees

Number of employees. Number of dependent employees (in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 213 \bar{N} : 4 \bar{T} : 11

4.82.44 scip_gapw26wy Gross APWW 26 weeks

Gross APWW 26 weeks. Gross wage for an APW after 26 weeks of work.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.45 scip_gapwyear Gross APW wage

Gross APW wage. Gross average industrial production worker's wage per year.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.46 scip_n26apwfa Net APWW 26 weeks, family

Net APWW 26 weeks, family. Net wage for a familied APW, after 26 weeks of work.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.47 scip_n26apwsi Net APWW 26 weeks, single

Net APWW 26 weeks, single. Net wage for a single APW, after 26 weeks of work.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.48 scip_napwekfa Net APWW per week, family

Net APWW per week, family. Net wage for a familied APW, per week.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.49 scip_napweksi Net APWW per week, single

Net APWW per week, single. Net wage for a single APW, per week.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.50 scip_netapwco Net APWW yearly, couple

Net APWW yearly, couple. Net wage for APW couple (single worker and homemaker spouse, no children), over entire year.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.51 scip_netapwfa Net APWW yearly, family

Net APWW yearly, family. Net wage for a familied APW, over entire year.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.52 scip_netapwsi Net APWW yearly, single

Net APWW yearly, single. Net wage for a single APW, over entire year.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.53 scip_pbeaverp Pension, average paid gross

Pension, average paid gross. The average pension paid to old-age pensioners (At the end of the year in question).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 194 \bar{N} : 3 \bar{T} : 10

4.82.54 scip_pbefulco Pension, full standard worker gross, couple

Pension, full standard worker gross, couple. Full old-age pension benefit for a married couple where only one spouse have been an average production worker per year (refers to the case where the conditions are fulfilled to the widest extent possible).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.55 scip_pbemaxco Pension, maximum gross, couple

Pension, maximum gross, couple. Maximum benefit for a married couple where only one spouse have been a wage earner per year (refers to the income-related benefits above that of an APW wage).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 215 \bar{N} : 4 \bar{T} : 11

4.82.56 scip_pbeminco Pension, minimum gross, couple

Pension, minimum gross, couple. Minimum old-age pension benefit for a married couple where only one spouse have been gainfully employed per year (reflects the floor of the pension insurance).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.57 scip_pbenfuls Pension, full standard worker gross, single

Pension, full standard worker gross, single. Full old-age pension benefit for a single average production worker per year (refers to the case where the conditions are fulfilled to the widest extent possible).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.58 scip_pbenmaxs Pension, maximum gross, single

Pension, maximum gross, single. Maximum benefit for a single person per year (refers to the income-related benefits above that of an APW wage).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 215 \bar{N} : 4 \bar{T} : 11

4.82.59 scip_pbenmins Pension, minimum gross, single

Pension, minimum gross, single. Minimum old-age pension benefit for a single person per year (reflects the floor of the pension insurance).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.60 scip_pbenstws Pension, standard worker gross, single

Pension, standard worker gross, single. Standard old-age pension benefit for a single average production worker per year (refers to the eligibility status specific for the APW, see description of APWW).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.61 scip_pbestwco Pension, standard worker gross, couple

Pension, standard worker gross, couple. Standard old-age pension benefit for a married couple where only one spouse have been an average production worker per year (refers to the eligibility status specific for the APW, see description of APWW).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.62 scip_pcontper Pension, contribution period

Pension, contribution period. Amount of weeks of contribution required to qualify for benefit, made in course of reference period.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.63 scip_pcovratp Pension, coverage

Pension, coverage. Coverage ratio in population 15-65 years of age.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.64 scip_pfinempr Pension, financing by employer

Pension, financing by employer. Total proportion of insurance fund receipts derived from employer contributions.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 213 \bar{N} : 4 \bar{T} : 11

4.82.65 scip_pfininsr Pension, financing by insured

Pension, financing by insured. Total proportion of insurance fund receipts derived from contributions by the individuals insured.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.66 scip_pfinothr Pension, financing by other

Pension, financing by other. Total proportion of insurance fund receipts derived from other financing sources (e.g. municipalities, interest income accruing from fund reserves, etc.).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 15 n: 107 \bar{N} : 2 \bar{T} : 7

4.82.67 scip_pfinstat Pension, financing by state

Pension, financing by state. Total proportion of insurance fund receipts derived from state general revenue.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.68 scip_pfulneco Pension, yearly full net, couple

Pension, yearly full net, couple. Full yearly amount of net pensions paid to couple.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.69 scip_pfulnesi Pension, yearly full net, single

Pension, yearly full net, single. Full yearly amount of net pensions paid to single worker.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.70 scip_pinceil Pension, income ceiling

Pension, income ceiling. Maximum annual income which workers may earn and still be qualified for benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.71 scip_pmaxneco Pension, yearly maximum net, couple

Pension, yearly maximum net, couple. Maximum yearly amount of net pensions paid to couple.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 205 \bar{N} : 3 \bar{T} : 11

4.82.72 scip_pmaxnesi Pension, yearly maximum net, single

Pension, yearly maximum net, single. Maximum yearly amount of net pensions paid to single worker.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 205 \bar{N} : 3 \bar{T} : 11

4.82.73 scip_pmeantst Pension, means test

Pension, means test. Dummy variable indicating whether individual and/or household means test is applied to determine male worker's qualification for benefit.

- 1. Means test
- 0. None

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.74 scip_pminneco Pension, yearly minimum net, couple

Pension, yearly minimum net, couple. Minimum yearly amount of net pensions paid to couple.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.75 scip_pminnesi Pension, yearly minimum net, single

Pension, yearly minimum net, single. Minimum yearly amount of net pensions paid to single worker.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.76 scip_pnerfuco Pension, yearly full net RR, couple

Pension, yearly full net RR, couple. Net full annual single APW replacement rate. (Old age pension).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.77 scip_pnerfusi Pension, yearly full net RR, single

Pension, yearly full net RR, single. Net full annual single APW replacement rate. (Old age pension).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.78 scip_pnermico Pension, yearly minimum net RR, couple

Pension, yearly minimum net RR, couple. Net minimum annual replacement rate for couple with one previously gainfully employed. (Old age pension).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.79 scip_pnermisi Pension, yearly minimum net RR, single

Pension, yearly minimum net RR, single. Net minimum annual single worker replacement rate. (Old age pension).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.80 scip_pnermxco Pension, yearly maximum net RR, couple

Pension, yearly maximum net RR, couple. Net Maximum annual single worker replacement rate. (Old age pension).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 205 \bar{N} : 3 \bar{T} : 11

4.82.81 scip_pnermxsi Pension, yearly maximum net RR, single

Pension, yearly maximum net RR, single. Net Maximum annual single worker replacement rate. (Old age pension).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 205 \bar{N} : 3 \bar{T} : 11

4.82.82 scip_pnerswco Pension, yearly standard worker net RR, couple

Pension, yearly net APW RR, couple. Net annual single APW replacement rate. (Old age pension).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.83 scip_pnerswsi Pension, yearly standard worker net RR, single

Pension, yearly net APW RR, single. Net annual single APW replacement rate. (Old age pension).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.84 scip_pnoinsur Pension, number of insured

Pension, number of insured. Total number of people formally entitled to old-age pension (in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.85 scip_popu1564 Working aged population

Working aged population. Total number of people in population 15-64 years of age (in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 213 \bar{N} : 4 \bar{T} : 11

4.82.86 scip_popu65ab Population above age of 65

Population above age of 65. Total number of persons that possibly could receive old-age pension at the age of 65 years (i.e. population 65 years and older, in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.87 scip_popuabpa Population above normal pension age

Population above normal pension age. Total number of persons that possibly could receive old-age pension at the normal pension age (i.e. population above the normal pension age, in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.88 scip_pratfuls Pension, full gross RR, single

Pension, full gross RR, single. Pension replacement rate full single (scip_pbenfuls/ scip_gapwyear).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.89 scip_pratmaxs Pension, maximum gross RR, single

Pension, maximum gross RR, single. Pension replacement rate maximum single (scip_pbenmaxs/ scip_gapwyear).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.90 scip_pratmins Pension, minimum gross RR, single

Pension, minimum gross RR, single. Pension replacement rate minimum single (scip_pbenmins/ scip_gapwyear).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.91 scip_pratstws Pension, standard worker gross RR, single

Pension, standard worker gross RR, single. Pension replacement rate standard worker single (scip_pbenstws/ scip_gapwyear).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.92 scip_prefrper Pension, reference period

Pension, reference period. Amount of years within which contribution record must have been fulfilled in order to qualify for benefit (if there is no specific reference period and the scheme is contributory, 50 years is coded).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.93 scip_presitst Pension, residence test

Pension, residence test. Dummy variable indicating whether there is a conditional residence test for benefit eligibility:

1. Residence test
0. None

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.94 scip_prtaverp Pension, average paid gross RR

Pension, average paid gross RR. The average pension replacement rate (scip_pbeaverp/ scip_gapwyear).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 191 \bar{N} : 3 \bar{T} : 10

4.82.95 scip_prtfulco Pension, full gross RR, couple

Pension, full gross RR, couple. Pension replacement rate full couple (scip_pbenfulco/ scip_gapwyear).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.96 scip_prtmaxco Pension, maximum gross RR, couple

Pension, maximum gross RR, couple. Pension replacement rate max couple (scip_pbenmaxco/scip_gapwyear).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.97 scip_prtminco Pension, minimum gross RR, couple

Pension, minimum gross RR, couple. Pension replacement rate minimum couple (scip_pbenminco/scip_gapwyear).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.98 scip_prtstwco Pension, standard worker gross RR, couple

Pension, standard worker gross RR, couple. Pension replacement rate standard worker couple (scip_pbenstwco/scip_gapwyear).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.99 scip_pstwneco Pension, yearly standard worker net, couple

Pension, yearly standard worker net, couple. Standard yearly amount of net pensions paid to APW couple.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.100 scip_pstwnesi Pension, yearly standard worker net, single

Pension, yearly standard worker net, single. Standard yearly amount of net pensions paid to single APW.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.101 scip_ptakeupn Number of old-age pensioners

Number of old-age pensioners. Total number of persons actually receiving old-age pension (in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 211 \bar{N} : 4 \bar{T} : 11

4.82.102 scip_pturat65 Pension, take up rate above age 65

Pension, take up rate above age 65. Share of pensioners in population above 65 years of age.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 212 \bar{N} : 4 \bar{T} : 11

4.82.103 scip_pturatpa Pension, take up rate above pension age

Pension, take up rate above pension age. Share of pensioners in population above normal pension age.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 212 \bar{N} : 4 \bar{T} : 11

4.82.104 scip_px2indst Pension, net RR index, STW

Pension, net APW RR average, $((\text{scip_pnerswsi} + \text{scip_pnerswco})/2)$.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.105 scip_s1stnerf Sickness, first week net RR, family

Sickness, first week net APW RR, family. Net familial worker replacement rate in first week with sickness benefit: $(\text{scip_sbestw1f} / \text{scip_napwekfa})$ for years and in countries when benefit not taxable, and $(\text{scip_sbestw1f} / \text{scip_scip_sgapweek})$ for years and in countries when benefit taxable.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.106 scip_s1stners Sickness, first week net RR, single

Sickness, first week net APW RR, single. Net single worker replacement rate in first week with sickness benefit: $(\text{scip_sbestw1s} / \text{scip_napweksi})$ for years and in countries when benefit not taxable, and $(\text{scip_sbestw1s} / \text{scip_scip_sgapweek})$ for years and in countries when benefit taxable.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.107 scip_sbenfulf Sickness, weekly full gross benefit (26w), family

Sickness, weekly full gross benefit (26w), family. Full amount of average weekly gross familial worker benefit over 26-week sickness spell (calculated on assumptions parallel to those above).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.108 scip_sbenfuls Sickness, weekly full gross benefit (26w), single worker

Sickness, weekly full gross benefit (26w), single worker. Full amount of average weekly gross single worker benefit over 26-week spell .

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.109 scip_sbenmaxf Sickness, weekly maximum gross benefit (26w), family

Sickness, weekly maximum gross benefit (26w), family. Maximum amount of average weekly gross familied worker benefit over 26-week sickness spell (calculated on assumptions parallel to those above).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.110 scip_sbenmaxs Sickness, weekly maximum gross benefit (26w), single worker

Sickness, weekly maximum gross benefit (26w), single worker. Maximum amount of average weekly gross single worker benefit over 26-week spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.111 scip_sbenminf Sickness, weekly minimum gross benefit (26w), family

Sickness, weekly minimum gross benefit (26w), family. Minimum amount of average weekly gross familied worker benefit over 26-week sickness spell (calculated on assumptions parallel to those above).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 211 \bar{N} : 4 \bar{T} : 11

4.82.112 scip_sbenmins Sickness, weekly minimum gross benefit (26w), single worker

Sickness, weekly minimum gross benefit (26w), single worker. Minimum amount of average weekly gross single worker benefit over 26-week spell (as calculated on basis of earnings of worker in lowest insured wage class specified in legislation; or, in some countries, on the basis of legislated minimum absolute levels of daily insurance or assistance benefit).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 211 \bar{N} : 4 \bar{T} : 11

4.82.113 scip_sbestw1f Sickness, first week gross benefit (26w), family APW

Sickness, first week gross benefit (26w), family APW. Standard amount of average weekly gross benefit paid to familial worker in first week of sickness spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.114 scip_sbestw1s Sickness, first week gross benefit, single APW

Sickness, first week gross benefit, single APW. Standard amount of gross benefit paid to single worker in first week of sickness spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.115 scip_sbesw26f Sickness, 26 weeks average gross benefit, family APW

Sickness, 26 weeks average gross benefit, family APW. Standard amount of average weekly gross familial worker benefit over 26-week sickness spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.116 scip_sbesw26s Sickness, 26 weeks average gross benefit, single APW

Sickness, 26 weeks average gross benefit, single APW. Standard amount of average weekly gross single worker benefit over 26-week sickness spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.117 scip_scontper Sickness, contribution period

Sickness, contribution period. Amount of weeks of contribution required to qualify for benefit, made in course of reference period.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.118 scip_scovratl Sickness, labour force coverage rate

Sickness, labour force coverage rate. Coverage ratio as proportion of labour force (scip_snoinsur / scip_slabforc).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.119 scip_scovratp Sickness, population coverage rate

Sickness, population coverage rate. Coverage ratio as proportion of population (scip_snoinsur / scip_spop1564).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.120 scip_sduratio Sickness, duration

Sickness, duration. Amount of weeks during which sickness benefit is payable to single industrial worker with work record as detailed in general information (indefinite duration maximised at 156 weeks, or three years).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.121 scip_sfinempr Sickness, financing by employer

Sickness, financing by employer. Total proportion of insurance fund receipts derived from employer contributions.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 215 \bar{N} : 4 \bar{T} : 11

4.82.122 scip_sfininsr Sickness, financing by insured

Sickness, financing by insured. Total proportion of insurance fund receipts derived from contributions by the individuals insured.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 215 \bar{N} : 4 \bar{T} : 11

4.82.123 scip_sfinothr Sickness, financing by other

Sickness, financing by other. Total proportion of insurance fund receipts derived from other financing sources (e.g. municipalities, interest income accruing from fund reserves, etc.).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 15 n: 109 \bar{N} : 2 \bar{T} : 7

4.82.124 scip_sfinstat Sickness, financing by state

Sickness, financing by state. Total proportion of insurance fund receipts derived from state general revenue.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 215 \bar{N} : 4 \bar{T} : 11

4.82.125 scip_sgapweek Gross APW weekly wage

Gross APW weekly wage. Gross average industrial production worker's wage per week.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.126 scip_sicfanet Sickness, net benefit 26w + APWW 26w, family

Sickness, net benefit 26w + APWW 26w, family. Net income for a family with one wage earner with 26-weeks of APW and 26-weeks with sickness insurance benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.127 scip_sicsinet Sickness, net benefit 26w + APWW 26w, single

Sickness, net benefit 26w + APWW 26w, single. Net income for single person with 26-weeks of APW and 26-weeks with sickness insurance benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.128 scip_sinceil Sickness, income ceiling

Sickness, income ceiling. Maximum annual income which workers may earn and still be qualified for benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.129 scip_slabforc Number in labour force

Number in labour force. Number in labour force (in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 213 \bar{N} : 4 \bar{T} : 11

4.82.130 scip_smeantst Sickness, means-test

Sickness, means-test. Dummy variable indicating whether individual and/or household means test is applied to determine male worker's qualification for benefit.

1. Means test
0. None

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.131 scip_snoinsur Sickness, number of insured

Sickness, number of insured. Total number of people formally entitled to sickness insurance benefits (in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.132 scip_spop1564 Population

Population. Number in population between 15-64 year old (in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 213 \bar{N} : 4 \bar{T} : 11

4.82.133 scip_sratfulf Sickness, Full gross RR (26w), family

Sickness, Full gross RR (26w), family. Full gross replacement rate, familial worker (scip_sratminf / scip_sgapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.134 scip_sratfuls Sickness, Full gross RR (26w), single worker

Sickness, Full gross RR (26w), single worker. Full gross replacement rate, single worker (scip_sbenfuls / scip_sgapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.135 scip_sratmaxf Sickness, Maximum gross RR (26w), family

Sickness, Maximum gross RR (26w), family. Maximum gross replacement rate, familial worker (scip_sratmaxf / scip_sgapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.136 scip_sratmaxs Sickness, Maximum gross RR (26w), single worker

Sickness, Maximum gross RR (26w), single worker. Maximum gross replacement rate, single worker (scip_sbenmaxs / scip_sgapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.137 scip_sratminf Sickness, Minimum gross RR (26w), family

Sickness, Minimum gross RR (26w), family. Minimum gross replacement rate, familied worker (scip_sbenminf / scip_sgapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 211 \bar{N} : 4 \bar{T} : 11

4.82.138 scip_sratmins Sickness, Minimum gross RR (26w), single worker

Sickness, Minimum gross RR (26w), single worker. Minimum gross replacement rate, single worker (scip_sbenmins / scip_sgapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 211 \bar{N} : 4 \bar{T} : 11

4.82.139 scip_srefrper Sickness, reference period

Sickness, reference period. Amount of weeks within which contribution record must have been fulfilled in order to qualify for benefit.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.140 scip_srtstw1f Sickness, Standard gross first week RR, family APW

Sickness, Standard gross first week RR, family APW. Standard gross first week replacement rate, familied worker (scip_sbestw1f / scip_sgapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.141 scip_srtstw1s Sickness, gross first week RR, single APW

Sickness, gross first week RR, single APW. Standard gross first week replacement rate, single worker (scip_sbestw1s / scip_sgapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.142 scip_srtsw26f Sickness, Standard gross 26-week RR, family APW

Sickness, Standard gross 26-week RR, family APW. Standard gross 26-week replacement rate, familied worker (scip_sbesw26f / scip_sgapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.143 scip_srtsw26s Sickness, gross 26-week RR, single APW

Sickness, gross 26-week RR, single APW. Standard gross 26-week replacement rate, single worker (scip_sbesw26s / scip_sgapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.144 scip_swaiting Sickness, waiting days

Sickness, waiting days. Number of legislated administrative "waiting days" of sickness at beginning of sickness spell when no benefits are paid out.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.145 scip_sz2indf Sickness, net APW RR average 1 and 26 weeks, family

Sickness, net APW RR average 1 and 26 weeks, family. $(scip_s1stnerf+scip_szrr26fa)/2$. Average of two components: a four-person family, first week after waiting days and 26 weeks with benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.146 scip_sz2inds Sickness, net APW RR average 1 and 26 weeks, single

Sickness, net APW RR average 1 and 26 weeks, single. $(scip_s1stners+scip_szrr26si)/2$. Average of two components: a single person, first week after waiting days and 26 weeks with benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.147 scip_sz4ind Sickness, net RR average 1 and 26 weeks

Sickness, net APW RR average 1 and 26 weeks. $(scip_s1stners+scip_s1stnerf+scip_szrr26si+scip_szrr26fa)/4$. Average of four components: a single person and a four-person family, for first week after waiting days and 26 weeks with benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.148 scip_szrr26fa Sickness, 26 weeks net RR, family

Sickness, 26 weeks net APW RR exclusive, family. Standard net familial worker replacement rate for total 26-week period of sickness benefit, excluding prior half-year's wage income from numerator and denominator.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.149 scip_szrr26si Sickness, 26 weeks net RR, single

Sickness, 26 weeks net APW RR exclusive, single. Standard net single worker replacement rate for total 26-week period of sickness benefit, excluding prior half-year's wage income from numerator and denominator.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.150 scip_u1stnerf Unemployment, first week net RR, family

Unemployment, first week net APW RR, family. Net familial worker replacement rate in first week of unemployment spell: (UBESTW1F / NAPWEKFA) for years and in countries when benefit not taxable, and (UBESTW1F / UGAPWEEK) for years and in countries when benefit taxable.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.151 scip_u1stners Unemployment, first week net RR, single

Unemployment, first week net APW RR, single. Net single worker replacement rate in first week of unemployment spell: (UBESTW1S / NAPWEKSI) for years and in countries when benefit not taxable, and (UBESTW1S / UGAPWEEK) for years and in countries when benefit taxable.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.152 scip_ubenfulf Unemployment, weekly full gross benefit (26w), family

Unemployment, weekly full gross benefit (26w), family. Full amount of average weekly gross familial worker benefit over 26-week spell (calculated on assumptions parallel to those above).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.153 scip_ubenfuls Unemployment, weekly full gross benefit (26w), single worker

Unemployment, weekly full gross benefit (26w), single worker. Full amount of average weekly gross single worker benefit over 26-week spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.154 scip_ubenmaxf Unemployment, weekly maximum gross benefit (26w), family

Unemployment, weekly maximum gross benefit (26w), family. Maximum amount of average weekly gross familial worker benefit over 26-week spell (calculated on assumptions parallel to those above).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 214 \bar{N} : 4 \bar{T} : 11

4.82.155 scip_ubenmaxs Unemployment, weekly maximum gross benefit (26w), single worker

Unemployment, weekly maximum gross benefit (26w), single worker. Maximum amount of average weekly gross single worker benefit over 26-week spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 214 \bar{N} : 4 \bar{T} : 11

4.82.156 scip_ubenminf Unemployment, weekly minimum gross benefit (26w), family
Unemployment, weekly minimum gross benefit (26w), family. Minimum amount of average weekly gross familial worker benefit over 26-week spell (calculated on assumptions parallel to those above).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 208 \bar{N} : 4 \bar{T} : 11

4.82.157 scip_ubenmins Unemployment, weekly minimum gross benefit (26w), single worker

Unemployment, weekly minimum gross benefit (26w), single worker . Minimum amount of average weekly gross single worker benefit over 26-week spell (as calculated on basis of earnings of worker in lowest insured wage class specified in legislation; or, in some countries, on the basis of legislated minimum absolute levels of daily insurance or assistance benefit).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 208 \bar{N} : 4 \bar{T} : 11

4.82.158 scip_ubestw1f Unemployment, first week gross benefit (26w), family APW

Unemployment, first week gross benefit (26w), family APW . Standard amount of average weekly gross benefit paid to familial worker in first week of unemployment spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.159 scip_ubestw1s Unemployment, first week gross benefit, single APW

Unemployment, first week gross benefit, single APW. Standard amount of gross benefit paid to single worker in first week of unemployment spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.160 scip_ubesw26f Unemployment, 26 weeks average gross benefit, family APW

Unemployment, 26 weeks average gross benefit, family APW. Standard amount of average weekly gross familial worker benefit over 26-week spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.161 scip_ubesw26s Unemployment, 26 weeks average gross benefit, single APW

Unemployment, 26 weeks average gross benefit, single APW. Standard amount of average weekly gross single worker benefit over 26-week unemployment spell.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.162 scip_ucontper Unemployment, contribution period

Unemployment, contribution period. Amount of weeks of contribution required to qualify for benefit, made in course of reference period.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.163 scip_ucovrate Unemployment, employee coverage rate

Unemployment, employee coverage rate. Unemployment insurance coverage ratio as proportion of employees ($\text{scip_unoinsur} / \text{scip_emplyes}$).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.164 scip_ucovratl Unemployment, labour force coverage rate

Unemployment, labour force coverage rate. Unemployment insurance coverage ratio as proportion of labour force ($\text{scip_unoinsur} / \text{scip_ulabforc}$).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.165 scip_uduratio Unemployment, duration

Unemployment, duration. Amount of weeks during which unemployment benefit is payable to single industrial worker with work record as detailed in general information (indefinite duration maximised at 156 weeks, or three years).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.166 scip_ufinmpr Unemployment, financing by employer

Unemployment, financing by employer. Total proportion of insurance fund receipts derived from employer contributions.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.167 scip_ufinnsr Unemployment, financing by insured

Unemployment, financing by insured. Total proportion of insurance fund receipts derived from contributions by the individuals insured.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.168 scip_ufinstat Unemployment, financing by state

Unemployment, financing by state. Total proportion of insurance fund receipts derived from state general revenue.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 216 \bar{N} : 4 \bar{T} : 11

4.82.169 scip_ugapweek Gross APW weekly wage

Gross APW weekly wage. Gross average industrial production worker's wage per week.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.170 scip_uinceil Unemployment, income ceiling

Unemployment, income ceiling. Maximum annual income which workers may earn and still be qualified for benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.171 scip_ulabforc Number in labour force

Number in labour force. Number in labour force (in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 213 \bar{N} : 4 \bar{T} : 11

4.82.172 scip_umeantst Unemployment, means-test

Unemployment, means-test. Dummy variable indicating whether individual and/or household means test is applied to determine male worker's qualification for benefit:

- (1) means test,
- (0) none.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.173 scip_unmfanet Unemployment, net benefit 26w + APWW 26w, family

Unemployment, net benefit 26w + APWW 26w, family. Net income for a family with one wage earner with 26-weeks of APW and 26-weeks with unemployment insurance benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.174 scip_unmsinet Unemployment, net benefit 26w + APWW 26w, single

Unemployment, net benefit 26w + APWW 26w, single. Net income for single person with 26-weeks of APW and 26-weeks with unemployment insurance benefits.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2005
N: 19 n: 217 \bar{N} : 4 \bar{T} : 11

4.82.175 scip_unoinsur Unemployment, number of insured

Unemployment, number of insured. Total number of people formally entitled to unemployment insurance benefits (in hundreds of thousands).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005
N: 19 n: 215 \bar{N} : 4 \bar{T} : 11

4.82.176 scip_uratfulf Unemployment, full gross RR (26w), family

Unemployment, full gross RR (26w), family. Full gross replacement rate, familial worker (scip_uratminf / scip_ugapweek).

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1947 Max. Year: 2005

4.83 Sustainable Governance Indicators

<http://www.sgi-network.org/2015/Downloads>
(Kroll & Schrad-Tischler, 2016)
(Data downloaded: 2016-10-11)

Sustainable Governance Indicators How successful are OECD/EU member states in achieving sustainable policy outcomes? How well developed are the governance capacities of OECD/EU countries in terms of the interaction between government and societal actors? What is the quality of their democratic order? The SGI answer these key questions by carrying out a systematic, indicator-based comparison of all OECD and EU countries, thus providing insight into the analyzed nations' political and social sustainability. Some 100 international experts participate in this broad-based study, carried out by the Bertelsmann Foundation. The first two editions of the SGI were published in 2009 and 2011, the third edition in 2014. Based on qualitative and quantitative indicators, the SGI provide a detailed picture of the countries' strengths and weaknesses in terms of sustainable governance. The individual country reports as well as all quantitative data are freely accessible online at www.sgi-network.org. With the SGI, we seek to contribute to the debate on "good governance" and sustainable policymaking, identify successful models and foster international learning processes within the OECD/EU and beyond.

4.83.11 **sgi_go Governance**

This pillar of the SGI examines the governance capacities of a political system in terms of its executive capability and accountability. Sustainable governance is defined here as the political management of public affairs that adopts a long-term view of societal development, takes into account the interests of future generations, and facilitates capacities for social change.

The Governance index examines how effective governments are in directing and implementing policies appropriate to these three goals. As a measuring tool grounded in practical evidence, the Governance index draws on 37 qualitative indicators posed in an expert survey that measure a country's institutional arrangements against benchmarks of good practices in governance. Governance in this context implies both the capacity to act ("executive capacity") and the extent to which non-governmental actors and institutions are endowed with the participatory competence to hold the government accountable to its actions ("executive accountability"). This includes citizens, legislatures, parties, associations and the media, that is, actors that monitor the government's activities and whose effective inclusion in the political process improve the quality of governance.

The dimension of Executive Capacity draws on the categories of steering capability, policy implementation and institutional learning. Steering capability questions explore the roles of strategic planning and expert advice, the effectiveness of interministerial coordination and regulatory impact assessments, and the quality of consultation and communication policies. Questions about implementation assess the government's ability to ensure effective and efficient task delegation to ministers, agencies or subnational governments. Questions on institutional learning refer to a government's ability to reform its own institutional arrangements and improve its strategic orientation.

The dimension of Executive Accountability is comprised of three categories corresponding to actors or groups of actors considered to be important agents of oversight and accountability in theories of democracy and governance. The questions here are designed to examine the extent to which citizens are informed of government policies, whether the legislature is capable of evaluating and acting as a "check" on the executive branch, and whether intermediary organizations (i.e., media, parties, interest associations) demonstrate relevance and policy know-how in exercising oversight. This approach is based on a dynamic understanding of governance in which power and authority is dispersed throughout the institutions, processes and structures of government. In order to account for the diversity of institutional arrangements, the index explicitly considers functional equivalencies in different countries, and pays equal attention to formal and informal as well as hierarchical and non-hierarchical institutional arrangements.

4.83.14 sgi_pp Policy Performance

This pillar of the SGI examines each country's policy performance in terms of three dimensions of sustainable development. If the goal of politics is to promote sustainable development, and if citizens are to be empowered to live their lives in accordance with their own individual talents, then governments must be able to establish and maintain the social, economic and environmental conditions for such well-being and empowerment. The conditions for social progress must be generated by suitable outcomes in certain policy fields. Such outcomes are examined by the Policy Performance pillar, which is comprised of 16 policy fields grouped in terms of economic, social and environmental sustainability. Each policy field is addressed by a qualitative assessment and additional quantitative data. The point here is to examine domestic policymaking as well as the extent to which governments actively contribute to the provision of global public goods. The areas examined are:

1. Economic Policies: economy, labor markets, taxes, budgets, research and innovation, global financial system
2. Social Policies: education, social inclusion, health, families, pensions, integration policy, safe living conditions, global inequalities
3. Environmental Policies: environment policy, global environmental protection

4.83.15 sgl_qd Quality of Democracy

This pillar of the SGI examines the quality of democracy in each country. From the perspective of long-term system stability and political performance, the quality of democracy and political participation are crucial aspects of a society's success. The stability and performance of a political system depends in large part upon the assent and confidence of its citizens. Democratic participation and oversight are also essential to genuine learning and adaptation processes, and to the ability to change. In this sense, guaranteeing opportunities for democratic participation and oversight, as well as the presence of due process and respect for civil rights, are fundamental prerequisites for the legitimacy of a political system. The quality of democracy in each country is measured against a definitional norm that considers issues relating to participation rights, electoral competition, access to information and the rule of law. Given that all OECD and EU member states constitute democracies, the questions posed here focus on the quality rather than the presence of democracy. Individual indicators monitor the following criteria:

1. Electoral processes
2. Access to information
3. Civil rights and political liberties
4. Rule of law

4.83.20 sgi_qdrlc Quality of Democracy: Rule of Law - Corruption Prevention

Quality of Democracy: Rule of Law - Corruption Prevention. To what extent are public officeholders prevented from abusing their position for private interests? This question addresses how the state and society prevent public servants and politicians from accepting bribes by applying mechanisms to guarantee the integrity of officeholders: auditing of state spending; regulation of party financing; citizen and media access to information; accountability of officeholders (asset declarations, conflict of interest rules, codes of conduct); transparent public procurement systems; effective prosecution of corruption. (1, 2): Public officeholders can exploit their offices for private gain as they see fit without fear of legal consequences or adverse publicity. (3, 4, 5): Some integrity mechanisms function, but do not effectively prevent public officeholders from abusing their positions. (6, 7, 8): Most integrity mechanisms function effectively and provide disincentives for public officeholders willing to abuse their positions. (9, 10): Legal, political and public integrity mechanisms effectively prevent public officeholders from abusing their positions.

4.85 Nunn (2008)

<http://scholar.harvard.edu/nunn/pages/data-0>
(Nunn, 2008)
(Data downloaded: 2016-10-11)

"The Long-Term Effects of Africa's Slave Trades" Dataset To construct a measure of the total number of slaves taken from each country during the four slave trades between 1400 and 1900, Nunn collected data that report the total number of slaves exported from each port or region in Africa and data that reports the ethnic identity of slaves shipped from Africa.

There were a number of ways Nunn identified the ethnicity or "nation" of a slave:

"The easiest was often by a slave's name. Slaves were often given a Christian first name and a surname that identified their ethnicity (e.g., Tardieu [2001]). As well, a slave's ethnicity could often be determined from ethnic markings, such as cuts, scars, hairstyles, or the filing of teeth (Karasch 1987, pp. 4-9)."

"Information on the ethnicities of slaves shipped during the trans-Atlantic slave trade comes from 54 different samples, totalling 80,656 slaves, with 229 distinct ethnic designations reported. Table I summarizes information about the samples used in the trans-Atlantic slave trade. The table reports the location, the years covered, the number of slaves, and the number of ethnicities that could be identified for each sample. Similar tables for the other three slave trades are reported in Nunn (2007).

The ethnicity data for the Indian Ocean slave trade come from six samples, with a total of 21,048 slaves and 80 different ethnicities reported. The data for the Red Sea slave trade are from two samples: one from Jeddah, Saudi Arabia, and the other from Bombay, India. The samples provide information for 67 slaves, with 32 different reported ethnicities. For the trans-Saharan slave trade two samples are available: one from central Sudan and the other from western Sudan. The samples provide information on the origins of 5,385 slaves, with 23 different ethnicities recorded. The shipping data from Austen (1992) also provide additional information on which caravan slaves were shipped on, the city or town that the caravan originated in, the destination of the caravan, and in some cases the ethnic identity of the slaves being shipped."

Nunn combines the data in the following way:

Using the shipping data, Nunn first calculates the number of slaves shipped from each coastal country in Africa. In an example 100,000 slaves were shipped from Country A and 250,000 were shipped from Country C. The problem with relying on the shipping data alone is that many of slaves shipped from Country A may have come from Country B, which lies landlocked behind Country A. Then, using the ethnicity data, Nunn calculates the ratio of slaves from each coastal country relative to any landlocked countries located inland of the coastal country. This requires to map ethnicities to countries and aggregate up to the country level. In practice, this step relied on a great amount of past research by African historians, linguists, and ethnographers. The sources most heavily used are Koelle (1854), Murdock (1959), Curtin (1969), Higinson (1984), and Hall (2005).

4.87 Transparency International

<http://www.transparency.org/research/cpi/overview>
(International, 2015)
(Data downloaded: 2016-09-20)

Corruption Perceptions Database The CPI focuses on corruption in the public sector and defines corruption as the abuse of public office for private gain. The surveys used in compiling the CPI tend to ask questions in line with the misuse of public power for private benefit, with a focus, for example, on bribe-taking by public officials in public procurement. The sources do not distinguish between administrative and political corruption. The CPI Score relates to perceptions of the degree of corruption as seen by business people, risk analysts and the general public and ranges between 10 (highly clean) and 0 (highly corrupt).

Note: The time-series information in the CPI scores can only be used if interpreted with caution. Year-to-year shifts in a country's score can result not only from a changing perception of a country's performance but also from a changing sample and methodology. That is, with differing respondents and slightly differing methodologies, a change in a country's score may also relate to the fact that different viewpoints have been collected and different questions have been asked. Moreover, each country's CPI score is composed as a 3-year moving average, implying that if changes occur they only gradually affect a country's score. For a more detailed discussion of comparability over time in the CPI, see Lambsdorff 2005.

Note: In 2012 TI changed to a scale ranging from 0-100 only assigning whole numbers. We have decided to multiply the values for years before 2012 by 10. Note also that there seems to have been some adjustment in the relative grading.

Also, the observation "Belgium/Luxembourg" from the 1995 data has been dropped.

The World Top Incomes Database Built to accompany the publishing of the two books *Top Incomes : a Global Perspective* (2010, Oxford University Press) and *Top Incomes over the XXth Century* (2007, Oxford University Press), the World Top Incomes Database offers the most comprehensive set of historical series on income inequality available so far. In the 2010 book, the authors analyze the long term evolution of top incomes in 12 new countries (after the 10 initial countries analysed in the 2007 book). The results presented in the books and the website have considerably renewed our knowledge of the long run dynamics of inequality. In particular, they radically question Kuznets' optimistic hypothesis on the interplay between economic development and the distribution of income.

4.89 UCDP/PRIO

<https://www.prio.org/Data/Armed-Conflict/UCDP-PRIO/>
(Erik Melander, 2016) (N. P. Gleditsch et al., 2002)
(Data downloaded: 2016-10-11)

UCDP/PRIO Armed Conflict Dataset The UCDP/PRIO Armed Conflict Dataset is a joint project between the Uppsala Conflict Data Program (UCDP) at the Department of Peace and Conflict Research, Uppsala University and the Centre for the Study of Civil War at the International Peace Research Institute in Oslo (PRIO). The dataset was first presented in Gleditsch, Wallensteen, Eriksson, Sollenberg & Strand (2002). The project is part of the larger Uppsala Conflict Data Program.

Both UCDP and PRIO offer a range of other datasets, compatible with the UCDP/PRIO dataset. Of special importance is the UCDP Dyadic dataset which is based on the UCDP/PRIO Armed Conflict Dataset, but goes beneath the conflict level and focuses on different dyads within each conflict. For more information on the UCDP Dyadic dataset, and for free download visit UCDP's web page. Further compatible datasets can be found on both PRIO's and UCDP's web pages.

4.89.1 ucdp_type1 Extrasystemic armed conflict

Number of extrasystemic armed conflicts per country in a given year. Extrasystemic armed conflict occurs between a state and a non-state group outside its own territory. (In the COW project,

extrasystemic war is subdivided into colonial war and imperial war, but this distinction is not used here.) These conflicts are by definition territorial, since the government side is fighting to retain control of a territory outside the state system.

4.90 Daniel Pemstein, Stephen A. Meserve, James Melton

<http://www.unified-democracy-scores.org/uds.html>

(Pemstein et al., 2010)

(Data downloaded: 2016-10-10)

Unified Democracy Scores Unified Democracy Scores (UDS), now covering the time period 1946-2012. These new scores incorporate recent updates to three of the ten original measures - Freedom House (2014), Polity IV (Marshall et al. 2012), and VanHanen (2012) - that feature in the analysis that we report in our 2010 article. In addition, the current release adds a recently developed measure of democracy - Economist Intelligence Unit (2012) - to our framework. Using the most current release of the UDS, we have replicated figure 3 from the original article to provide users with a snapshot of the updated scores, focusing on the year 2000.

4.91 UNDP

<http://hdr.undp.org/en/data>
(United Nations Development Program, 2015)
(Data downloaded: 2016-10-03)

Human Development Report The Human Development Report (HDR) is an annual report published by the Human Development Report Office of the United Nations Development Programme (UNDP)

4.91.1 undp_hdi Human Development Index

The HDI was created to emphasize that people and their capabilities should be the ultimate criteria for assessing the development of a country, not economic growth alone. The HDI can also be used to question national policy choices, asking how two countries with the same level of GNI per capita can end up with different human development outcomes. These contrasts can stimulate debate about government policy priorities. The Human Development Index (HDI) is a summary measure of average achievement in key dimensions of human development: a long and healthy life, being knowledgeable and have a decent standard of living. The HDI is the geometric mean of normalized indices for each of the three dimensions. The health dimension is assessed by life expectancy at birth, the education dimension is measured by mean of years of schooling for adults aged 25 years and more and expected years of schooling for children of school entering age. The standard of living dimension is measured by gross national income per capita. The HDI uses the logarithm of income, to reflect the diminishing importance of income with increasing GNI. The scores for the three HDI dimension indices are then aggregated into a composite index using geometric mean. Refer to Technical notes for more details. The HDI simplifies and captures only part of what human development entails. It does not reflect on inequalities, poverty, human security, empowerment, etc. The HDRO offers the other composite indices as broader proxy on some of the key issues of human development, inequality, gender disparity and human poverty.

4.93 UN Statistics

<http://unstats.un.org/unsd/snaama/dnllist.asp>
(UN Statistics, 2016)
(Data downloaded: 2016-10-07)

National Accounts Main Aggregates Database The National Accounts Main Aggregates Database presents a series of analytical national accounts tables from 1970 onwards for more than 200 countries and areas of the world. It is the product of a global cooperation effort between the Economic Statistics Branch of the United Nations Statistics Division, international statistical agencies and the national statistical services of these countries and is developed in accordance with the recommendation of the Statistical Commission at its first session in 1947 that the Statistics Division should publish regularly the most recent available data on national accounts for as many countries and areas as possible.

4.94 Vanhanen, Tatu

https://services.fsd.uta.fi/catalogue/FSD1289?tab=download&lang=en&study_language=en
(Vanhanen, 2016)
(Data downloaded: 2015-11-24)

Measures of Democracy 1810-2014 The data contain three different variables, created by Tatu Vanhanen in his long-term research, for each year from 1810 to 2012. The variables in question are political competition, political participation and the index of democratization.

4.94.1 van_comp Competition

The competition variable portrays the electoral success of smaller parties, that is, the percentage of votes gained by the smaller parties in parliamentary and/or presidential elections. The variable is calculated by subtracting from 100 the percentage of votes won by the largest party (the party which wins most votes) in parliamentary elections or by the party of the successful candidate in presidential elections. Depending on their importance, either parliamentary or presidential elections are used in the calculation of the variable, or both elections are used, with weights. If information on the distribution of votes is not available, or if the distribution does not portray the reality accurately, the distribution of parliamentary seats is used instead. If parliament members are elected but political parties are not allowed to take part in elections, it is assumed that one party has taken all votes or seats. In countries where parties are not banned but yet only independent candidates participate in elections, it is assumed that the share of the largest party is not over 30 percent.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1946 Max. Year: 1979
N: 159 n: 3694 \bar{N} : 109 \bar{T} : 23

4.94.2 van_index Index of Democratization

The index of democratization is formed by multiplying the competition and the participation variables and then dividing the outcome by 100.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1946 Max. Year: 1979
N: 159 n: 3694 \bar{N} : 109 \bar{T} : 23

4.94.3 van_part Participation

The political participation variable portrays the voting turnout in each election, and is calculated as the percentage of the total population who actually voted in the election. In the case of indirect elections, only votes cast in the final election are taken into account. If electors have not been elected by citizens, only the number of actual electors is taken into account, which means that the degree of participation drops to the value 0. If an election to choose electors has been held, the participation variable is calculated from the number and distribution of votes in that election. National referendums raise the variable value by five percent and state (regional) referendums by one percent for the year they are held. Referendums can add the degree of participation at maximum by 30 percent a year. The value of the combined degree of participation cannot be higher than 70 percent, even in cases where the sum of participation and referendums would be higher than 70.

Variable not included in Cross-Section Data

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1946 Max. Year: 1979
N: 159 n: 3694 \bar{N} : 109 \bar{T} : 23

4.95 Varieties of Democracy (V-Dem) Project

<https://v-dem.net/en/data/>
(Coppedge et al., 2016b) (Coppedge et al., 2016a)
(Data downloaded: 2016-01-12)

Varieties of Democracy Dataset version 6.2 Varieties of Democracy (V-Dem) is a new approach to conceptualizing and measuring democracy. It is a collaboration among more than 50 scholars worldwide which is co-hosted by the Department of Political Science at the University of Gothenburg, Sweden; and the Kellogg Institute at the University of Notre Dame, USA.

4.95.1 vdem_corr Political corruption

Political corruption. Question: How pervasive is political corruption?

Clarification: The directionality of the V-Dem corruption index runs from less corrupt to more corrupt (unlike the other V-Dem variables that generally run from less democratic to more democratic situation). The corruption index includes measures of six distinct types of corruption that cover both different areas and levels of the polity realm, distinguishing between executive, legislative and judicial corruption. Within the executive realm, the measures also distinguish between corruption mostly pertaining to bribery and corruption due to embezzlement. Finally, they differentiate between corruption in the highest echelons of the executive (at the level of the rulers/cabinet) on the one hand, and in the public sector at large on the other. The measures thus tap into several distinguished types of corruption: both 'petty' and 'grand'; both bribery and theft; both corruption aimed and influencing law making and that affecting implementation. Aggregation: The index is arrived at by taking the average of (a) public sector corruption index; (b) executive corruption index; (c) the indicator for legislative corruption; and (d) the indicator for judicial corruption. In other words, these four different government spheres are weighted equally in the resulting index. V-Dem replace missing values for countries with no legislature by only taking the average of (a), (b) and (d).

Min. Year:2012 Max. Year: 2013

4.95.2 vdem_delibdem Deliberative democracy index

Deliberative democracy index. Question: To what extent is the ideal of deliberative democracy achieved?

Clarification: The deliberative principle of democracy focuses on the process by which decisions are reached in a polity. A deliberative process is one in which public reasoning focused on the common good motivates political decisions - as contrasted with emotional appeals, solidary attachments, parochial interests, or coercion. According to this principle, democracy requires more than an aggregation of existing preferences. There should also be respectful dialogue at all levels - from preference formation to final decision - among informed and competent participants who are open to persuasion. To make it a measure of not only the deliberative principle but also of democracy, the index also takes the level of electoral democracy into account.

Min. Year:2012 Max. Year: 2014
N: 164

N: 174 n: 8733 \bar{N} : 125 \bar{T} : 50

4.95.3 vdem_dl_delib Deliberative component index

Deliberative component index. Question: To what extent is the deliberative principle of democracy achieved?

Clarification: The deliberative principle of democracy focuses on the process by which decisions are reached in a polity. A deliberative process is one in which public reasoning focused on the common good motivates political decisions - as contrasted with emotional appeals, solidary attachments,

parochial interests, or coercion. According to this principle, democracy requires more than an aggregation of existing preferences. There should also be respectful dialogue at all levels - from preference formation to final decision - among informed and competent participants who are open to persuasion. To measure these features of a polity we try to determine the extent to which political elites give public justifications for their positions on matters of public policy, justify their positions in terms of the public good, acknowledge and respect counter-arguments; and how wide the range of consultation is at elite levels. Aggregation: The index is formed by point estimates drawn from a Bayesian factor analysis model including the following indicators: reasoned justification, common good justification, respect for counterarguments, range of consultation, and engaged society.

Min. Year:2012 Max. Year: 2013

4.95.4 vdem_edcomp_thick Electoral component index

Electoral component index. Question: To what extent is the electoral principle of democracy achieved?

Clarification: The electoral principle of democracy seeks to achieve responsiveness and accountability between leaders and citizens through the mechanism of competitive elections. This is presumed to be achieved when suffrage is extensive; political and civil society organizations can operate freely; elections are clean and not marred by fraud or systematic irregularities; and the chief executive of a country is selected (directly or indirectly) through elections. Aggregation: The electoral component index is operationalized as a chain defined by its weakest link of freedom of association, suffrage, clean elections, and elected executive.

Min. Year:2012 Max. Year: 2014
N: 165

Min. Year:1946 Max. Year: 2015
N: 175 n: 8766 \bar{N} : 125 \bar{T} : 50

4.95.5 vdem_egal Egalitarian component index

Egalitarian component index. Question: To what extent is the egalitarian principle achieved?

Clarifications: The egalitarian principle of democracy holds that material and immaterial inequalities inhibit the exercise of formal rights and liberties, and diminish the ability of citizens from all social groups to participate. Egalitarian democracy is achieved when 1) rights and freedoms of individuals are protected equally across all social groups; and 2) resources are distributed equally across all social groups. The distribution of resources must be sufficient to ensure that citizens' basic needs are met in a way that enables their meaningful participation. Additionally, an equal distribution of resources ensures the potential for greater equality in the distribution of power. Aggregation: This index is formed by averaging the following indices: equal protection index and equal distribution of resources.

Min. Year:2012 Max. Year: 2013
N: 165

Min. Year:1946 Max. Year: 2015
N: 175 n: 8789 \bar{N} : 126 \bar{T} : 50

4.95.6 vdem_egaldem Egalitarian democracy index

Egalitarian democracy index. Question: To what extent is the ideal of egalitarian democracy achieved?

Clarifications: The egalitarian principle of democracy holds that material and immaterial inequalities inhibit the exercise of formal rights and liberties, and diminish the ability of citizens from all social groups to participate. Egalitarian democracy is achieved when 1) rights and freedoms of individuals are protected equally across all social groups; and 2) resources are distributed equally across all social groups. The distribution of resources must be sufficient to ensure that citizens' basic needs are met in a way that enables their meaningful participation. Additionally, an equal distribution of resources ensures the potential for greater equality in the distribution of power. To make it a measure of egalitarian democracy, the index also takes the level of electoral democracy into account.

4.95.7 vdem_elvotbuy Election vote buying

Election vote buying. Question: In this national election, was there evidence of vote and/or turnout buying?

Clarification: Vote and turnout buying refers to the distribution of money or gifts to individuals, families, or small groups in order to influence their decision to vote/not vote or whom to vote for. It does not include legislation targeted at specific constituencies, i.e., "porkbarrel" legislation. V-Dem uses a specifically designed measurement model to provide country-year point estimates, aggregated from multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

4.95.16 vdem_libdem Liberal democracy index

Liberal democracy index. Question: To what extent is the ideal of liberal democracy achieved?

Clarifications: The liberal principle of democracy emphasizes the importance of protecting individual and minority rights against the tyranny of the state and the tyranny of the majority. The liberal model takes a "negative" view of political power insofar as it judges the quality of democracy by the limits placed on government. This is achieved by constitutionally protected civil liberties, strong rule of law, an independent judiciary, and effective checks and balances that, together, limit the exercise of executive power. To make this a measure of liberal democracy, the index also takes the level of electoral democracy into account.

Min. Year:2012 Max. Year: 2014
N: 165

Min. Year:1946 Max. Year: 2015
N: 175 n: 8766 \bar{N} : 125 \bar{T} : 50

4.95.17 vdem_liberal Liberal component index

Liberal component index. Question: To what extent is the liberal principle of democracy achieved?

Clarification: The liberal principle of democracy emphasizes the importance of protecting individual and minority rights against the tyranny of the state and the tyranny of the majority. The liberal model takes a "negative" view of political power insofar as it judges the quality of democracy by the limits placed on government. This is achieved by constitutionally protected civil liberties, strong rule of law, an independent judiciary, and effective checks and balances that, together, limit the exercise of executive power. Aggregation: This index is formed by averaging the following indices: equality before the law and individual liberties, judicial constraints on the executive, and legislative constraints on the executive.

Min. Year:2012 Max. Year: 2013

4.95.19 vdem_partip Participatory component index

Participatory component index. Question: To what extent is the participatory principle achieved?

Clarification: The participatory principle of democracy emphasizes active participation by citizens in all political processes, electoral and non-electoral. It is motivated by uneasiness about a bedrock practice of electoral democracy: delegating authority to representatives. Thus, direct rule by citizens is preferred, wherever practicable. This model of democracy thus takes suffrage for granted, emphasizing engagement in civil society organizations, direct democracy, and subnational elected bodies. Aggregation: This index is formed by averaging the following indices: civil society participation, direct popular vote, elected local government power, and elected regional government power.

Min. Year:2012 Max. Year: 2013
N: 165

Min. Year:1946 Max. Year: 2015

N: 175 n: 8766 \bar{N} : 125 \bar{T} : 50

4.95.21 vdem_polyarchy Electoral democracy index

Electoral democracy index. Question: To what extent is the ideal of electoral democracy in its fullest sense achieved?

Clarifications: The electoral principle of democracy seeks to embody the core value of making rulers responsive to citizens, achieved through electoral competition for the electorate's approval under circumstances when suffrage is extensive; political and civil society organizations can operate freely; elections are clean and not marred by fraud or systematic irregularities; and elections affect the composition of the chief executive of the country. In between elections, there is freedom of expression and an independent media capable of presenting alternative views on matters of political relevance. In the VDem conceptual scheme, electoral democracy is understood as an essential element of any other conception of (representative) democracy - liberal, participatory, deliberative, egalitarian, or some other. Aggregation: The index is formed by taking the average of, on the one hand, the sum of the indices measuring freedom of association (thick), suffrage, clean elections, elected executive (de jure) and freedom of expression; and, on the other, the five-way interaction between those indices. This is half way between a straight average and strict multiplication, meaning the average of the two. It is thus a compromise between the two most well known aggregation formulas in the literature, both allowing "compensation" in one sub-component for lack of polyarchy in the others, but also punishing countries not strong in one sub-component according to the "weakest link" argument. The aggregation is done at the level of Dahls sub-components (with the one exception of the non-electoral component).

4.96 Jelle Visser

<http://uva-aias.net/en/ictwss>
(Visser, 2015)
(Data downloaded: 2016-09-22)

The ICTWSS database The ICTWSS database covers four key elements of modern political economies: trade unionism, wage setting, state intervention and social pacts. The database contains annual data for all OECD and EU member states.

4.96.1 vi_ext Extension of Collective Agreements

Mandatory extension of collective agreements to non-organised employers.

0. There are neither legal provisions for mandatory extension, nor is there a functional equivalent.
1. Extension is rather exceptional, used in some industries only, because of absence of sector agreements, very high thresholds (supermajorities of 60% or more, public policy criteria, etc.), and/or resistance of employers.
2. Extension is used in many industries, but there are thresholds and Ministers can (and sometimes do) decide not to extend (clauses in) collective agreements.
3. Extension is virtually automatic and more or less general (including enlargement).

4.96.2 vi_mws Minimum Wage Setting

Minimum Wage Setting.

0. No statutory minimum wage, no sectoral or national agreements.
1. Minimum wages are set by (sectoral) collective agreement or tripartite wage boards in (some) sectors.
2. Minimum wages are set by national (cross-sectoral or inter-occupational) agreement ("autonomous agreement") between unions and employers.
3. National minimum wage is set by agreement (as in 1 or 2) but extended and made binding by law or Ministerial decree.
4. National minimum wage is set through tripartite negotiations.
5. National minimum wage is set by government, but after (non-binding) tripartite consultations.
6. Minimum wage set by judges or expert committee, as in award-system.
7. Minimum wage is set by government but government is bound by fixed rule (index-based minimum wage).
8. Minimum wage is set by government, without fixed rule.

4.96.11 vi_wcoord Coordination of Wage-Setting

Coordination of Wage-Setting.

1. Fragmented wage bargaining, confined largely to individual firms or plants.
2. Mixed industry and firm-level bargaining, with no or little pattern bargaining and relatively weak elements of government coordination through the setting of minimum wage or wage indexation.
3. Negotiation guidelines based on a) centralized bargaining by peak associations with or without government involvement b) informal centralisation of industry-level bargaining c) government arbitration or intervention.
4. Wage norms or guidelines (recommendations) based on a) centralized bargaining by peak associations with or without government involvement b) informal centralisation of industry-level bargaining by a powerful and monopolistic union confederation c) extensive, regularized pattern setting coupled with high degree of union concentration.
5. Maximum or minimum wage rates/increases based on a) centralized bargaining by peak association(s), with or without government involvement, and/or government imposition of wage schedule/freeze, with peace obligation b) informal centralisation of industry-level bargaining by a powerful and monopolistic union confederation c) extensive, regularized pattern setting and highly synchronized bargaining coupled with coordination of bargaining by influential large firms.

4.96.12 vi_wgi Government Intervention in Wage Bargaining

Government Intervention in Wage Bargaining.

1. None of the following.
2. The government influences wage bargaining by providing an institutional framework of consultation and information exchange, by conditional agreement to extend private sector agreements, and/or by providing a conflict resolution mechanism which links the settlement of disputes across the economy and/or allows the intervention of state arbitrators or Parliament.
3. The government influences wage bargaining outcomes indirectly through price-ceilings, indexation, tax measures, minimum wages, and/or pattern setting through public sector wages.
4. The government participates directly in wage bargaining (tripartite bargaining, as in social pacts).
5. The government imposes private sector wage settlements, places a ceiling on bargaining outcomes or suspends bargaining.

4.96.13 vi_wl Wage Bargaining Level

The predominant level at which wage bargaining takes place.

1. Bargaining predominantly takes place at the local or company level.
2. Intermediate or alternating between sector and company bargaining.
3. Bargaining predominantly takes place at the sector or industry level.
4. Intermediate or alternating between central and industry bargaining.
5. Bargaining predominantly takes place at central or cross-industry level and there are centrally determined binding norms or ceilings to be respected by agreements negotiated at lower levels.

4.97 Vision of Humanity

<http://www.visionofhumanity.org/#/page/indexes/terrorism-index>
(Vision of Humanity, 2015)
(Data downloaded: 2015-11-23)

Global Terrorism Index The Global Terrorism Index (GTI) is a comprehensive study which accounts for the direct and indirect impact of terrorism in 162 countries in terms of its effect on lives lost, injuries, property damage and the psychological after-effects of terrorism. This study covers 99.6 per cent of the world's population. It aggregates the most authoritative data source on terrorism today, the Global Terrorism Database (GTD) collated by the National Consortium for the Study of Terrorism and Responses to Terrorism (START) into a composite score in order to provide an ordinal ranking of nations on the negative impact of terrorism. The GTD is unique in that it consists of systematically and comprehensively coded data on domestic as well as international terrorist incidents and now includes more than 140,000 cases.

4.98 Worldbank

<http://info.worldbank.org/governance/wgi/index.aspx#home>
(Kaufmann et al., 2010)
(Data downloaded: 2016-09-16)

The Worldwide Governance Indicators These indicators are based on several hundred individual variables measuring perceptions of governance, drawn from 31 separate data sources constructed by 25 different organizations. These individual measures of governance are assigned to categories capturing key dimensions of governance. An unobserved component model is used to construct six aggregate governance indicators. Point estimates of the dimensions of governance, the margins of error as well as the number of sources are presented for each country. The governance estimates are normally distributed with a mean of zero and a standard deviation of one each year of measurement. This implies that virtually all scores lie between -2.5 and 2.5, with higher scores corresponding to better outcomes.

WARNING: Since the estimates are standardized (with a mean of zero and a standard deviation of one) each year of measurement, they are not directly suitable for over-time comparisons within countries. Kaufmann et al. (2006) however find no systematic time-trends in a selection of indicators that do allow for comparisons over time, which suggests that time-series information in the WBGI scores can be used if interpreted with caution.

4.98.1 wsgi_cce Control of Corruption

Control of Corruption - Estimate: "Control of Corruption" measures perceptions of corruption, conventionally defined as the exercise of public power for private gain. The particular aspect of corruption measured by the various sources differs somewhat, ranging from the frequency of "additional payments to get things done", to the effects of corruption on the business environment, to measuring "grand corruption" in the political arena or in the tendency of elite forms to engage in "state capture".

4.98.4 wbgi_gee Government Effectiveness

Government Effectiveness - Estimate: "Government Effectiveness" combines into a single grouping responses on the quality of public service provision, the quality of the bureaucracy, the competence of civil servants, the independence of the civil service from political pressures, and the credibility of the government's commitment to policies. The main focus of this index is on "inputs" required for the government to be able to produce and implement good policies and deliver public goods.

4.98.10 wsgi_rle Rule of Law

Rule of Law - Estimate: "Rule of Law" includes several indicators which measure the extent to which agents have confidence in and abide by the rules of society. These include perceptions of the incidence of crime, the effectiveness and predictability of the judiciary, and the enforceability of contracts. Together, these indicators measure the success of a society in developing an environment in which fair and predictable rules form the basis for economic and social interactions and the extent to which property rights are protected.

4.99.15 wdi_agedr Age dependency ratio (% of working-age population)

Age dependency ratio is the ratio of dependents—people younger than 15 or older than 64—to the working-age population—those ages 15-64. Data are shown as the proportion of dependents per 100 working-age population.

Min. Year:2013 Max. Year: 2013
N: 183

Min. Year:1960 Max. Year: 2014
N: 189 n: 8463 \bar{N} : 154 \bar{T} : 45

4.99.16 wdi_agrland Agricultural land (% of land area)

Agricultural land refers to the share of land area that is arable, under permanent crops, and under permanent pastures. Arable land includes land defined by the FAO as land under temporary crops

(double-cropped areas are counted once), temporary meadows for mowing or for pasture, land under market or kitchen gardens, and land temporarily fallow. Land abandoned as a result of shifting cultivation is excluded. Land under permanent crops is land cultivated with crops that occupy the land for long periods and need not be replanted after each harvest, such as cocoa, coffee, and rubber. This category includes land under flowering shrubs, fruit trees, nut trees, and vines, but excludes land under trees grown for wood or timber. Permanent pasture is land used for five or more years for forage, including natural and cultivated crops.

N: 183 n: 1318 \bar{N} : 43 \bar{T} : 7

4.99.28 wdi_brdeath Battle-related deaths (number of people)

Battle-related deaths are deaths in battle-related conflicts between warring parties in the conflict dyad (two conflict units that are parties to a conflict). Typically, battle-related deaths occur in warfare involving the armed forces of the warring parties. This includes traditional battlefield fighting, guerrilla activities, and all kinds of bombardments of military units, cities, and villages, etc. The targets are usually the military itself and its installations or state institutions and state representatives, but there is often substantial collateral damage in the form of civilians being killed in crossfire, in indiscriminate bombings, etc. All deaths—military as well as civilian—incurred in such situations, are counted as battle-related deaths.

4.99.30 wdi_broadb Fixed broadband subscriptions (per 100 people)

Fixed broadband subscriptions refers to fixed subscriptions to high-speed access to the public Internet (a TCP/IP connection), at downstream speeds equal to, or greater than, 256 kbit/s. This includes cable modem, DSL, fiber-to-the-home/building, other fixed (wired)-broadband subscriptions, satellite broadband and terrestrial fixed wireless broadband. This total is measured irrespective of the method of payment. It excludes subscriptions that have access to data communications (including the Internet) via mobile-cellular networks. It should include fixed WiMAX and any other fixed wireless technologies. It includes both residential subscriptions and subscriptions for organizations.

4.99.37 wdi_debt Central government debt, total (% of GDP)

Debt is the entire stock of direct government fixed-term contractual obligations to others outstanding on a particular date. It includes domestic and foreign liabilities such as currency and money deposits, securities other than shares, and loans. It is the gross amount of government liabilities reduced by

the amount of equity and financial derivatives held by the government. Because debt is a stock rather than a flow, it is measured as of a given date, usually the last day of the fiscal year.

4.99.81 wdi_eodb Ease of doing business index

Ease of doing business ranks economies from 1 to 189, with first place being the best. A high ranking (a low numerical rank) means that the regulatory environment is conducive to business operation. The index averages the country's percentile rankings on 10 topics covered in the World Bank's Doing Business. The ranking on each topic is the simple average of the percentile rankings on its component indicators.

N: 187 n: 3144 \bar{N} : 70 \bar{T} : 17

4.99.84 wdi_expeduge Expenditure on education as % of total government expenditure (%)

Total general (local, regional and central) government expenditure on education (current, capital, and transfers), expressed as a percentage of total general government expenditure on all sectors (including health, education, social services, etc.). It includes expenditure funded by transfers from international sources to government. Public education expenditure includes spending by local/municipal, regional and national governments (excluding household contributions) on educational institutions (both public and private), education administration, and subsidies for private entities (students/households and other private entities). In some instances data on total public expenditure on education refers only to the ministry of education and can exclude other ministries that spend a part of their budget on educational activities. The indicator is calculated by dividing total public expenditure on education incurred by all government agencies/departments by the total government expenditure and multiplying by 100. For more information, consult the UNESCO Institute of Statistics website: <http://www.uis.unesco.org/Education/>

4.99.85 wdi_expedup Expenditure on primary as % of government expenditure on education (%)

Expenditure on education by level of education, expressed as a percentage of total general government expenditure on education. Divide government expenditure on a given level of education (ex. primary, secondary) by total government expenditure on education (all levels combined), and multiply by 100. A high percentage of government expenditure on education spent on a given level denotes a high priority given to that level compared to others. When interpreting this indicator, one

should take into account enrolment at that level, and the relative costs per student between different levels of education. For more information, consult the UNESCO Institute of Statistics website: <http://www.uis.unesco.org/Education/>

4.99.93 wdi_expml Military expenditure (% of GDP)

Military expenditures data from SIPRI are derived from the NATO definition, which includes all current and capital expenditures on the armed forces, including peacekeeping forces; defense ministries and other government agencies engaged in defense projects; paramilitary forces, if these are judged to be trained and equipped for military operations; and military space activities. Such expenditures include military and civil personnel, including retirement pensions of military personnel and social services for personnel; operation and maintenance; procurement; military research and development; and military aid (in the military expenditures of the donor country). Excluded are civil defense and current expenditures for previous military activities, such as for veterans' benefits, demobilization, conversion, and destruction of weapons. This definition cannot be applied for all countries, however, since that would require much more detailed information than is available about what is included in military budgets and off-budget military expenditure items. (For example, military budgets might or might not cover civil defense, reserves and auxiliary forces, police and paramilitary forces, dual-purpose forces such as military and civilian police, military grants in kind, pensions for military personnel, and social security contributions paid by one part of government to another.)

4.99.105 wdi_fooddef Depth of the food deficit

The depth of the food deficit indicates how many calories would be needed to lift the undernourished from their status, everything else being constant. The average intensity of food deprivation of the undernourished, estimated as the difference between the average dietary energy requirement and the

average dietary energy consumption of the undernourished population (food-deprived), is multiplied by the number of undernourished to provide an estimate of the total food deficit in the country, which is then normalized by the total population.

4.99.132 wdi_gini GINI index (World Bank estimate)

Gini index measures the extent to which the distribution of income (or, in some cases, consumption expenditure) among individuals or households within an economy deviates from a perfectly equal distribution. A Lorenz curve plots the cumulative percentages of total income received against the cumulative number of recipients, starting with the poorest individual or household. The Gini index measures the area between the Lorenz curve and a hypothetical line of absolute equality, expressed as a percentage of the maximum area under the line. Thus a Gini index of 0 represents perfect equality, while an index of 100 implies perfect inequality.

4.99.133 wdi_gniatlcur GNI, Atlas method (current US dollar)

GNI (formerly GNP) is the sum of value added by all resident producers plus any product taxes (less subsidies) not included in the valuation of output plus net receipts of primary income (compensation of employees and property income) from abroad. Data are in current U.S. dollars. GNI, calculated in national currency, is usually converted to U.S. dollars at official exchange rates for comparisons across economies, although an alternative rate is used when the official exchange rate is judged to diverge by an exceptionally large margin from the rate actually applied in international transactions. To smooth fluctuations in prices and exchange rates, a special Atlas method of conversion is used by the World Bank. This applies a conversion factor that averages the exchange rate for a given year and the two preceding years, adjusted for differences in rates of inflation between the country, and through 2000, the G-5 countries (France, Germany, Japan, the United Kingdom, and the United States). From 2001, these countries include the Euro area, Japan, the United Kingdom, and the United States.

4.99.144 wdi_homicides Intentional homicides (per 100,000 people)

Intentional homicides are estimates of unlawful homicides purposely inflicted as a result of domestic disputes, interpersonal violence, violent conflicts over land resources, intergang violence over turf or control, and predatory violence and killing by armed groups. Intentional homicide does not include all intentional killing; the difference is usually in the organization of the killing. Individuals or small groups usually commit homicide, whereas killing in armed conflict is usually committed by fairly cohesive groups of up to several hundred members and is thus usually excluded.

4.99.147 wdi_imigs International migrant stock (% of population)

International migrant stock is the number of people born in a country other than that in which they live. It also includes refugees. The data used to estimate the international migrant stock at a particular time are obtained mainly from population censuses. The estimates are derived from the data on foreign-born population—people who have residence in one country but were born in another country. When data on the foreign-born population are not available, data on foreign population—that is, people who are citizens of a country other than the country in which they reside—are used as estimates. After the breakup of the Soviet Union in 1991 people living in one of the newly independent countries who were born in another were classified as international migrants. Estimates of migrant stock in the newly independent states from 1990 on are based on the 1989 census of the Soviet Union. For countries with information on the international migrant stock for at least two points in time, interpolation or extrapolation was used to estimate the international migrant stock on July 1 of the reference years. For countries with only one observation, estimates for the reference years were derived using rates of change in the migrant stock in the years preceding or following the single observation available. A model was used to estimate migrants for countries that had no data.

4.99.208 wdi_nerp Net enrolment rate, primary, both sexes (%)

Total number of students in the theoretical age group for primary education enrolled in that level, expressed as a percentage of the total population in that age group. Divide the number of students enrolled who are of the official age group for primary education by the population for the same age group and multiply the result by 100. NER at each level of education should be based on enrolment of the relevant age group in all types of schools and education institutions, including public, private and all other institutions that provide organized educational programmes. A high NER denotes a high degree of coverage for the official school-age population. The theoretical maximum value is 100%. Increasing trends can be considered as reflecting improving coverage at the specified level of education. When the NER is compared with the GER, the difference between the two highlights the incidence of under-aged and over-aged enrolment. If the NER is below 100%, then the complement, i.e. the difference with 100%, provides a measure of the proportion of children not enrolled at the specified level of education. However, since some of these children/youth could be enrolled at other levels of education, this difference should in no way be considered as indicating the percentage of students not enrolled. To measure universal primary education, for example, adjusted primary NER is calculated on the basis of the percentage of children in the official primary school age range who are enrolled in either primary or secondary education. A more precise complementary indicator is the Age-specific enrolment ratio (ASER) which shows the participation in education of the population of each particular age, regardless of the level of education.

N: 181 n: 2904 \bar{N} : 65 \bar{T} : 16

4.99.211 wdi_nerpr Adjusted net enrolment rate, primary, both sexes (%)

Total number of students of the official primary school age group who are enrolled at primary or secondary education, expressed as a percentage of the corresponding population. Divide the total number of students in the official primary school age range who are enrolled in primary or secondary education by the population of the same age group and multiply the result by 100. NERA should be based on total enrolment of the official primary school participation age group in primary and secondary education for all types of schools and education institutions, including public, private and all other institutions that provide organized educational programmes (pre-primary education must be excluded). NERA gives more precise measure of the participation of the official primary school age population to the education system (excluding pre-primary education). It reflects the actual level of achievement of the Universal Primary Education (UPE) goal. In fact, while the Net enrolment rate (NER) shows the coverage of pupils in the official primary school age group in the primary education level only, the NERA extends the measure to those of the official primary school age range who have reached secondary education because they might access primary education earlier than the official entrance or they might skip some grades due to their performance. Increasing NERA might mirror improving participation of children in the official primary school age, the decrease of the target population or both. A value of 100% indicates theoretically that the country has accomplished the UPE goal. However, this condition is not sufficient for UPE due to, for example, a high repetition rate, which might lead pupils to dropout after primary school age without completing primary education. The difference between NERA and NER provides a measure of the proportion of children in the official primary age group who are enrolled in secondary education.

4.99.212 wdi_nerprf Adjusted net enrolment rate, primary, female (%)

Total number of students of the official primary school age group who are enrolled at primary or secondary education, expressed as a percentage of the corresponding population. Divide the total number of students in the official primary school age range who are enrolled in primary or secondary education by the population of the same age group and multiply the result by 100. NERA should be based on total enrolment of the official primary school participation age group in primary and secondary education for all types of schools and education institutions, including public, private and all other institutions that provide organized educational programmes (pre-primary education must be excluded). NERA gives more precise measure of the participation of the official primary school age population to the education system (excluding pre-primary education). It reflects the actual level of achievement of the Universal Primary Education (UPE) goal. In fact, while the Net enrolment rate (NER) shows the coverage of pupils in the official primary school age group in the primary education level only, the NERA extends the measure to those of the official primary school age range who have reached secondary education because they might access primary education earlier than the official entrance or they might skip some grades due to their performance. Increasing NERA might mirror improving participation of children in the official primary school age, the decrease of the target

population or both. A value of 100% indicates theoretically that the country has accomplished the UPE goal. However, this condition is not sufficient for UPE due to, for example, a high repetition rate, which might lead pupils to dropout after primary school age without completing primary education. The difference between NERA and NER provides a measure of the proportion of children in the official primary age group who are enrolled in secondary education.

4.99.231 wdi_povgap190 Poverty gap at dollar1.90 a day (2011 PPP) (%)

Poverty gap at dollar1.90 a day (2011 PPP) is the mean shortfall in income or consumption from the poverty line dollar1.90 a day (counting the nonpoor as having zero shortfall), expressed as a percentage of the poverty line. This measure reflects the depth of poverty as well as its incidence. As a result of revisions in PPP exchange rates, poverty rates for individual countries cannot be compared with poverty rates reported in earlier editions. Note: five countries – Bangladesh, Cabo Verde, Cambodia, Jordan, and Lao PDR – use the 2005 PPP conversion factors and corresponding dollar1.25 a day and dollar2 a day poverty lines. This is due to the large deviations in the rate of change in PPP factors relative to the rate of change in domestic consumer price indexes. See Box 1.1 in the Global Monitoring Report 2015/2016 (<http://www.worldbank.org/en/publication/global-monitoring-report>) for a detailed explanation.

4.101 Christian Welzel

<http://www.leuphana.de/en/university/staff-members/cristian-welzel.html>

(Welzel, 2013)

(Data downloaded: 2015-04-14)

Data from Freedom Rising by Christian Welzel The World Values Survey measures of secular values and emancipative values are theoretically explained and empirically tested for their cross-cultural reliability and validity in Freedom Rising , pp. 57-105. The backward estimates of emancipative values for decades before available survey data are explained in Freedom Rising, pp. 157-161.

4.101.1 wel_aa Associational Activity

Meaning: Formative 7-item index measuring to what extent people are active in all of the associations from type 1 to type 3 (see above). At the country level, the indicator measures the prevalence of such activity in a given society, using the population average.

Source: World Values Surveys, all countries and time points with available data.

Scaling: Variables are rescaled such that non-membership is coded 0, inactive membership coded 0.5 and active membership 1 for each association. Then the average over the associations is calculated. Country-level scores are the average of each national sample from the WVS.

Min. Year: 2010 Max. Year: 2014
N: 53

Variable not included
in Time-Series Data

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.101.2 wel_aa1 Associational Activity (Type 1)

Meaning: Formative 3-item index measuring to what extent people are active in recreational, humanitarian and environmental associations. At the country level, the indicator measures the prevalence of such activity in a given society, using the population average.

Source: World Values Surveys, all countries and time points with available data.

Scaling: Variables are rescaled such that non-membership is coded 0, inactive membership coded 0.5 and active membership 1 for each association. Then the average over the associations is calculated. Country-level scores are the average of each national sample from the WVS.

Min. Year: 2010 Max. Year: 2014

 \bar{T} : N/A

4.101.3 wel_aa2 Associational Activity (Type 2)

Meaning: Formative 3-item index measuring to what extent people are active in the church or religious organizations. At the country level, the indicator measures the prevalence of such activity in a given society, using the population average.

Source: World Values Surveys, all countries and time points with available data.

Scaling: Variables are rescaled such that non-membership is coded 0, inactive membership coded 0.5 and active membership 1. Country-level scores are the average of each national sample from the WVS.

Min. Year: 2010 Max. Year: 2014
N: 56

Variable not included
in Time-Series Data

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.101.4 wel_aa3 Associational Activity (Type 3)

Meaning: Formative 3-item index measuring to what extent people are active in political parties, labour unions and professional associations. At the country level, the indicator measures the prevalence of such activity in a given society, using the population average.

Source: World Values Surveys, all countries and time points with available data.

Scaling: Variables are rescaled such that non-membership is coded 0, inactive membership coded 0.5 and active membership 1 for each association. Then the average over the associations is calculated. Country-level scores are the average of each national sample from the WVS.

Min. Year: 2010 Max. Year: 2014
N: 53

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.101.5 wel_citrig Citizen Rights

Meaning: Conditional index that measures the prevalence of citizen rights as the presence of respect of political participation rights on the condition of the presence of respect of personal autonomy rights, using multiplication to combine the two [CitRig = PAR * PPR].

Source: Welzel's (2013: 254-263) "citizen rights index," available annually for most countries in the world from 1981 to 2010.

Scaling: Index scores range from 0 for the complete absence of citizen rights in law and practice to 1 for their full presence in law and practice, with proper fractions for intermediate positions.

Links: Data sources, rescaling procedures and replication data are meticulously documented in the Online Appendix to Welzel's (2013) Freedom Rising at www.cambridge.com/welzel (p. 72). Test statistics documenting this index's superior validity in comparison to alternative democracy measures are reported in Welzel (2013: 267-271).

Note: the missing code (-99) has been recoded to missing (.).

Min. Year: 2010 Max. Year: 2010
N: 187

Min. Year: 1981 Max. Year: 2010
N: 191 n: 4533 \bar{N} : 151 \bar{T} : 24

4.101.6 wel_cm Cognitive Mobilization

Meaning: Formative multi-item index measuring the extent of people's cognitive mobilization over the domains of informational connectedness, perceived stimulation and emancipative values [(InfCon + PerSti + EVI) / 3] calculated at the individual level and then aggregated to the country level.

Source: Index invented by Welzel, based on data from the World Values Surveys, all countries from rounds five and six.

Scaling: Multi-point index with original scores on each of the multiple items rescaled from minimum 0 to maximum 1, with proper fractions for intermediate positions, and then averaged over the three measures. Components load on the same dimension at the individual level, with pretty similar loadings, and their combination produces a highly reliable overall index (alpha above .80). Country scores are population averages (arithmetic mean) on the 0-1 index.

Remarks: Individual-level scores are normally distributed around the mean in each national sample.

Min. Year: 2010 Max. Year: 2014
N: 54

Variable not included
in Time-Series Data

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.101.7 wel_coc Control of Corruption

Meaning: Factor scale from the World Bank's "global governance indicators" measuring the degree of corruption control in a country.

Source: Alexander and Welzel (2011); Alexander, Inglehart and Welzel (2012). Categorization is available in annual measures for most countries of the world from 1996 to 2006.

Scaling: The factor scores are standardized into a range from minimum 0 (for the lowest ever observed corruption control) to maximum 1.0 (for the highest ever observed corruption control), with fractions for intermediate positions. Note: In the original data there exists two different observations for Dominica, the value has been recoded to missing for this country.

Min. Year: 2012 Max. Year: 2012
N: 185

Min. Year: 1996 Max. Year: 2012
N: 188 n: 2544 \bar{N} : 150 \bar{T} : 14

4.101.8 wel_culture Culture Zone

Meaning: Culture zone scheme, attributing each country to one of ten distinct culture zones created on the basis of religious traditions, imperial/colonial legacies and ethno-linguistic composition. Source: Classification invented and developed in Welzel, Freedom Rising (2013: 23-34), www.cambridge.org/welzel (Online Appendix, p. 8-11).

Coding:

1. "Reformed West" (Western European societies strongly affected by the Reformation)
2. "New West" (overseas offshoots of Western Europe)
3. "Old West" (mostly Catholic parts of Western Europe being core parts of the Roman Empire)
4. "Returned West" (Catholic and Protestant parts of post-communist Europe returning to the EU)
5. "Orthodox East" (Christian Orthodox or Islamic parts of the post-communist world, mostly parts of former USSR)
6. "Indic East" (parts of South and South East Asia under the historic influence of Indian culture)
7. "Islamic East" (regions of the Islamic world that have been parts of the Arab/Caliphate, Persian and Ottoman empires)
8. "Sinic East" (parts of East Asia under the historic influence of Chinese culture)
9. "Latin America" (Central and South America and the Caribbean)
10. "Sub-Saharan Africa" (African countries South of the Sahara).

Remarks: A cluster analysis asking to place countries into ten different clusters on the basis of religious traditions, imperial legacies and ethno-linguistic composition variables produces a ninety percent overlapping classification of countries.

Min. Year:2010 Max. Year: 2014
N: 56

Min. Year:1981 Max. Year: 2014
N: 104 n: 286 \bar{N} : 8 \bar{T} : 3

4.101.9 wel_cwi Cool Water Index

Meaning: The indicator measures the prevalence of relatively cool temperatures in each season combined with abundant fresh water resources throughout the year, on a country's historically most populated areas.

Source: Index construction based on geo-climate data from the Harvard Geography Project, as documented in the appendix to Welzel's (2013) Freedom Rising, online at www.cambridge.org/welzel, pp. 105-112.

Scaling: Scores range from 0 for the hottest and driest countries to 1 for countries combining highly consistent precipitation with cold temperatures.

Min. Year:2010 Max. Year: 2014
N: 56

Min. Year:1981 Max. Year: 2014
N: 103 n: 285 \bar{N} : 8 \bar{T} : 3

4.101.10 wel_demenl Enlightened Understanding of Democracy

Meaning: 6-item index measuring the extent to which people's understanding of democracy is enlightened in the sense that they define democracy "correctly" by its liberal core and at the same time explicitly reject non-liberal alternative notions.

Source: Index invented and documented in Welzel, Freedom Rising (2013: 79; 310-315), www.cambridge.org/welzel (Online Appendix, p. 100), based on data from the World Values Surveys, countries from rounds five and six.

Scaling: Multi-point index from minimum 0 when all three liberal notions of democracy are fully rejected and all three non-liberal notion fully accepted, to maximum 1.0, when the exact opposite is the case, with proper fractions for intermediate positions. Country scores are population averages (arithmetic mean) on the 0-1 index.

Remarks: Individual-level scores are normally distributed around the mean in each national sample.

Min. Year:2010 Max. Year: 2014

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.101.11 wel_demlib Liberal Understanding of Democracy

Meaning: 3-item index measuring the extent to which people's understanding of democracy is liberal in the sense that they define democracy "correctly" by its liberal, including free elections, civil liberties and equal rights.

Source: Index invented and documented in Welzel, Freedom Rising (2013: 79; 310-315), www.cambridge.org/welzel (Online Appendix, p. 100), based on data from the World Values Surveys, countries from rounds five

and six.

Scaling: Multi-point index from minimum 0 when all three liberal notions of democracy are fully rejected, to maximum 1.0, when the exact opposite is the case, with proper fractions for intermediate positions. Country scores are population averages (arithmetic mean) on the 0-1 index.

Remarks: Individual-level scores are normally distributed around the mean in each national sample.

4.101.12 wel_demnlib Non-Liberal Understanding of Democracy

Meaning: 3-item index measuring the extent to which people's understanding of democracy is non-liberal in the sense that they define democracy "incorrectly" by non-liberal attributes, including religious authority over the laws, military authority over government and unemployment benefits.

Source: Index invented and documented in Welzel, *Freedom Rising* (2013: 79; 310-315), www.cambridge.org/welzel (Online Appendix, p. 100), based on data from the World Values Surveys, countries from rounds five and six.

Scaling: Multi-point index from minimum 0 when all three non-liberal notions of democracy are fully rejected, to maximum 1.0, when the exact opposite is the case, with proper fractions for intermediate positions. Country scores are population averages (arithmetic mean) on the 0-1 index.

Remarks: Individual-level scores are normally distributed around the mean in each national sample.

4.101.13 wel_dr Democratic Rights

Meaning: 14-point index measuring the prevalence of democratic rights based on Freedom House's "civil liberties" and "political rights" ratings.

Source: Alexander and Welzel (2011); Alexander, Inglehart and Welzel (2012). Categorization is available in annual measures for most countries of the world from 1996 to 2006.

Scaling: The two Freedom House scales are inverted, averaged and standardized into a range from minimum 0 (no democratic rights) to 100 (maximum democratic rights), with percentages of the maximum rights for intermediate positions. Note: In the original data there exists two different observations for Dominica, the value has been recoded to missing for this country.

Min. Year:2012 Max. Year: 2012
N: 188

Min. Year:1996 Max. Year: 2012
N: 189 n: 2620 \bar{N} : 154 \bar{T} : 14

4.101.14 wel_edi Effective Democracy Index

Meaning: Conditional multi-point index measuring the extent of effective democracy, understood as the presence of democratic rights on the condition that honest governance puts them into real practice [EDI = DemRig * HonGov].

Source: Alexander and Welzel (2011); Alexander, Inglehart and Welzel (2012). Categorization is available in annual measures for most countries of the world from 1996 to 2006.

Scaling: Scores are weighted percentages ranging from a theoretical minimum of 0 for the least effective or absent democracy to 100 for the most effective democracy. Note: In the original data there exists two different observations for Dominica, the value has been recoded to missing for this country.

Min. Year:2012 Max. Year: 2012
N: 187

Min. Year:1996 Max. Year: 2012
N: 189 n: 2557 \bar{N} : 150 \bar{T} : 14

4.101.15 wel_evau Emancipative Values: Autonomy Component

Meaning: 3-item index measuring a national culture's emphasis on universal freedoms in the domain of personal autonomy (independence, imagination and non-obedience as desired child qualities).

Source: Index invented and documented in Welzel, Freedom Rising (2013: 66-69), www.cambridge.org/welzel (Online Appendix, p. 20-29), based on data from the World Values Surveys, all countries and time points.

Scaling: Four-point scale, ranging from a theoretical minimum of 0 when the least secular position is taken on all 3 items, to a maximum of 1.0 when the most secular position is taken on all 3 items. Intermediate positions are given in fractions of 1.0. Country scores are population averages (arithmetic mean) on the 0-1 index.

Min. Year:2010 Max. Year: 2014
N: 56

Min. Year:1981 Max. Year: 2014
N: 104 n: 284 \bar{N} : 8 \bar{T} : 3

4.101.16 wel_evch Emancipative Values: Choice Component

Meaning: 3-item index measuring a national culture's emphasis on universal freedoms in the domain of reproductive choices (acceptance of divorce, abortion, homosexuality). Source: Index invented and documented in Welzel, Freedom Rising (2013: 66-69), www.cambridge.org/welzel (Online Appendix, p. 20-29), based on data from the World Values Surveys, all countries and time points. Scaling: Multi-point scale, ranging from a theoretical minimum of 0 when the least emancipative position is taken on all 3 items, to a maximum of 1.0 when the most emancipative position is taken on all 3 items. Intermediate positions are given in fractions of 1.0. Country scores are population averages (arithmetic mean) on the 0-1 index.

Min. Year:2010 Max. Year: 2014
N: 55

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.101.18 wel_evi Emancipative Values Index

Meaning: "Protective-vs.-Emancipative Values" - 12-item index measuring a national culture's emphasis on universal freedoms in the domains of (1) reproductive choice (acceptance of divorce, abortion, homosexuality), (2) gender equality (support of women's equal access to education, jobs and power), (3) people's voice (priorities for freedom of speech and people's say in national, local and job affairs), and (4) personal autonomy (independence, imagination and non-obedience as desired child qualities). Source: Index invented and documented in Welzel, Freedom Rising (2013: 66-69), www.cambridge.org/welzel (Online Appendix, p. 20-29), based on data from the World Values Surveys, all countries and time points.

Scaling: Continuous scale, ranging from a theoretical minimum of 0 when the least emancipative position is taken on all 12 items, to a maximum of 1.0 when the most emancipative position is taken on all 12 items. Intermediate positions are given in fractions of 1.0. Country scores are population averages (arithmetic mean) on the 0-1 index.

Remarks: The EVI is a conceptual refinement of Inglehart and Welzel's (2005) "Survival-vs.-Self-expression Values." Individual-level scores are normally distributed around the mean in each national sample. In the context of Freedom Rising's human empowerment framework, emancipative values are interpreted as motivational empowerment.

Min. Year:2010 Max. Year: 2014
N: 56

N: 104 n: 281 \bar{N} : 8 \bar{T} : 3

4.101.19 wel_evvo Emancipative Values: Voice Component

Meaning: 3-item index measuring a national culture's emphasis on universal freedoms in the domain of people's voice (priorities for freedom of speech and people's say in national and local affairs).

Source: Index invented and documented in Welzel, *Freedom Rising* (2013: 66-69), www.cambridge.org/welzel (Online Appendix, p. 20-29), based on data from the World Values Surveys, all countries and time points.

Scaling: Multi-point scale, ranging from a theoretical minimum of 0 when the least emancipative position is taken on all 3 items, to a maximum of 1.0 when the most emancipative position is taken on all 3 items. Intermediate positions are given in fractions of 1.0. Country scores are population averages (arithmetic mean) on the 0-1 index.

Remarks: This index partly overlaps with Inglehart's (1977; 1997) measure of postmaterialist values.

Min. Year: 2010 Max. Year: 2014
N: 55

Min. Year: 1981 Max. Year: 2014
N: 103 n: 282 \bar{N} : 8 \bar{T} : 3

4.101.20 wel_hei Human Empowerment Index

Meaning: The indicator measures to what extent a population is intellectually, motivationally and institutionally empowered, calculating the average over the three partial empowerments [(IntEmp + MotEmp + IntEmp) / 3].

Source: Welzel, Human Empowerment Project.

Scaling: Index scores range from 0 for the least to 1.0 for the most possible human empowerment. The three partial empowerments are strongly one-dimensional, with equal loadings of around .92 on their common underlying factor. The overall index is highly reliable (alpha above .80).

Links: Data sources, rescaling procedures and replication data are meticulously documented in the Online Appendix to Welzel's (2013) *Freedom Rising* at www.cambridge.com/welzel (p. 72). Test statistics documenting this index's superior validity in comparison to alternative democracy measures are reported in Welzel (2013: 267-271).

Min. Year: . Max. Year: .

 \bar{T} : N/A

4.101.21 wel_ic Informational Connectedness

Meaning: 8-item index measuring the diversity of information sources used by the average individual in a nation.

Source: Index invented and documented in Welzel, *Freedom Rising* (2013: 79), www.cambridge.org/welzel (Online Appendix, p. 29-30), based on data from the World Values Surveys, countries from rounds five and six.

Scaling: Multi-point index, ranging from a theoretical minimum of 0, when not a single one of the eight information sources has been used "last week," to a maximum of 1.0, when all eight sources were used. Intermediate positions are measured in fractions of 1. Country scores are population averages (arithmetic mean) on the 0-1 index.

Remarks: Individual-level scores are normally distributed around the mean in each national sample. In *Freedom Rising's* (2013) human empowerment framework, informational connectedness is interpreted as connective empowerment.

 \bar{T} : N/A

4.101.22 wel_ie Individual Empowerment

Meaning: Formative multi-item index measuring the extent to which the people in a society are mentally and habitually empowered to make their own choices and to pursue them in their actions. The index covers the domains of motivational empowerment (emancipative values), connective empowerment (informational connectedness), perceptive empowerment (perceived stimulation), intellectual empowerment (formal education) and behavioural empowerment (social movement activity) [(EVI + InfCon + PerSti + ForEdu + SMA) / 5 calculated at the individual level and then aggregated to the country level].

Source: Index invented by Welzel, based on data from the World Values Surveys, all countries from rounds five and six.

Scaling: Multi-point index with original scores on each of the multiple items rescaled from minimum 0 to maximum 1, with proper fractions for intermediate positions, and then averaged over all the measures. Components load on the same dimension at the individual level, with pretty similar loadings, and their combination produces a highly reliable overall index (alpha above .80). Country scores are population averages (arithmetic mean) on the 0-1 index.

Remarks: Individual-level scores are normally distributed around the mean in each national sample.

 \bar{T} : N/A

4.101.23 wel_insemp Institutional Empowerment

Meaning: The indicator measures to what extent a country enacts personal autonomy rights and political participation rights by law and respects them practice.

Source: Welzel's (2013: 254-263) "citizen rights index" based on Freedom House's "civil liberties" and "political rights" ratings as well as Cingranelli/Richards' "integrity rights" and "empowerments rights" ratings. Freedom House measures are taken as the base but downgraded for uncovered rights violations tapped by the Cingranelli/Richards measures. Measures to create the Human Empowerment Index (see below) are averaged over the years 1995 to 2005.

Scaling: Index scores range from 0 for the complete absence of citizen rights in law and practice to 1 for their full presence in law and practice, with proper fractions for intermediate positions.

Links: Data sources, rescaling procedures and replication data are meticulously documented in the Online Appendix to Welzel's (2013) Freedom Rising at www.cambridge.com/welzel (p. 72). Test statistics documenting this index's superior validity in comparison to alternative democracy measures are reported in Welzel (2013: 267-271).

4.101.25 wel_mob Mobilization Potential for Democratizing Pressures

Meaning: Index measures the extent to which people's enlightened democratic desires exceed the perceived democraticness of their country, assuming that this gap between desired and perceived democraticness creates mass mobilization potential for democratic reform movements. The potential is the 0-to-1 standardized residuals obtained from regressing EnlDes on PerDem at the individual level and aggregating these scores to the country level by using the mean.

Source: Welzel, based on data from the World Values Surveys, all countries from rounds five and six. Scaling: Multi-point index ranging from minimum 0, when a respondent's enlightened democratic desire is much lower than what her democracy assessment predicts, to maximum 1.0, when the enlightened democratic desire is much higher than what the democracy assessment predicts. Country scores are population averages (arithmetic mean) on the 0-1 index.

Remarks: Individual-level scores are normally distributed around the mean in each national sample.

4.101.26 wel_motemp Motivational Empowerment

Meaning: The indicator measures to what extent a population is motivated by emancipative values. These values are considered as an empowering motivation because they make people urge for control over their lives.

Source: Welzel's (2013: 254-263) "emancipative values index" (EVI, see above), covering the years 1995 to 2005, with variable time points for different countries.

Scaling: Index scores range from 0 for the weakest possible to 1.0 for the strongest possible emphasis on emancipative values.

Min. Year: . Max. Year: .
N: 103

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.101.27 wel_par Personal Autonomy Rights

Meaning: The indicator measures to what extent a country enacts personal autonomy rights by law and respects them practice.

Source: Welzel's (2013: 254-263) "personal autonomy rights index" based on Freedom House's "civil liberties" as well as Cingranelli/Richards' "integrity rights." Freedom House civil liberties are inverted and then standardized into a range from minimum 0 to maximum 1.0. CIRI integrity rights are also standardized into a range from minimum 0 to maximum 1.0. Then the average of the two is taken to measure personal autonomy rights. Measures exist on an annual basis from 1981 to 2010 for most countries in the world.

Scaling: Index scores range from 0 for the completely absent or disrespected personal autonomy rights to 1.0 for their full presence and respect, with proper fractions for intermediate positions.

Links: Data sources, rescaling procedures and replication data are meticulously documented in the Online Appendix to Welzel's (2013) Freedom Rising at www.cambridge.com/welzel (p. 72). Test statistics documenting this index's superior validity in comparison to alternative democracy measures are reported in Welzel (2013: 267-271).

4.101.28 wel_ppr Political Participation Rights

Meaning: The indicator measures to what extent a country enacts political participation rights by law and respects them practice.

Source: Welzel's (2013: 254-263) "political participation rights index" based on Freedom House's "political rights" as well as Cingranelli/Richards' "empowerment rights." Freedom House political rights are inverted and then standardized into a range from minimum 0 to maximum 1.0. CIRI empowerment rights are also standardized into a range from minimum 0 to maximum 1.0. Then the average of the two is taken to measure political participation rights. Measures exist on an annual basis from 1981 to 2010 for most countries in the world.

Scaling: Index scores range from 0 for completely absent or disrespected political participation rights to 1.0 for their full presence and respect, with proper fractions for intermediate positions.

Links: Data sources, rescaling procedures and replication data are meticulously documented in the Online Appendix to Welzel's (2013) Freedom Rising at www.cambridge.com/welzel (p. 72). Test statistics documenting this index's superior validity in comparison to alternative democracy measures are reported in Welzel (2013: 267-271).

4.101.29 wel_ps Perceived Stimulation

Meaning: 3-item index measuring the extent of people's perceived cognitive stimulation based on whether they perceive their daily tasks as mostly "routine versus creative," mostly "manual versus intellectual" and as mostly "remote controlled versus supervised," with the latter option in each of these three (1 to 10 scaled) polarities indicating stronger perceived stimulation.

Source: Welzel, based on data from the World Values Surveys, all countries from rounds five and six. Scaling: Multi-point index with original scores on each of the three items rescaled from minimum 0 to maximum 1, with proper fractions for intermediate positions, and then averaged over the three measures. Country scores are population averages (arithmetic mean) on the 0-1 index.

Remarks: Individual-level scores are normally distributed around the mean in each national sample. In Welzel's human empowerment framework, perceived stimulation is interpreted as perceptive empowerment.

Min. Year:2010 Max. Year: 2014
N: 56

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A

4.101.34 wel_sma Social Movement Activity

Meaning: 3-item index measuring to what extent three types of peaceful social movement activities (petitions, demonstrations, boycotts) are part of a national culture's action repertoire.

Source: Index invented and documented in Welzel, Freedom Rising (2013: 222-225), www.cambridge.org/welzel (Online Appendix, p. 66-70), based on data from the World Values Surveys.

Scaling: Multi-point index from a theoretical minimum 0 when none of the three activities is part of the action repertoire to 1.0 when all three of them are. On each activity, non-execution is coded 0, anticipated execution .33 and actual execution 1. Then for each individual the average over the three activities is calculated. Country scores are population averages (arithmetic mean) on the 0-1 index.

Remarks: Individual-level scores are normally distributed around the mean in each national sample. In the context of Freedom Rising's human empowerment framework, social movement activity is interpreted as behavioural empowerment.

4.101.38 wel_svre Secular Values: Relativism Component

Meaning: 3-item index measuring a national culture's distance to "sacred" sources of authority in the domain of normative authority (anti-bribery, anti-cheating and anti-evasion norms).

Source: Index invented and documented in Welzel, *Freedom Rising* (2013: 63-66), www.cambridge.org/welzel (Online Appendix, p. 12-19), based on data from the World Values Surveys, all countries and time points.

Scaling: Multi-point scale, ranging from a theoretical minimum of 0 when the least secular position is taken on all 3 items, to a maximum of 1.0 when the most secular position is taken on all 3 items. Intermediate positions are given in fractions of 1.0. Country scores are population averages (arithmetic mean) on the 0-1 index.

Min. Year:2010 Max. Year: 2014
N: 56

Min. Year:1981 Max. Year: 2014
N: 103 n: 279 \bar{N} : 8 \bar{T} : 3

4.101.39 wel_svsk Secular Values: Skepticism Component

Meaning: 3-item index measuring a national culture's distance to "sacred" sources of authority in the domain of order institutions (army, police, courts).

Source: Index invented and documented in Welzel, *Freedom Rising* (2013: 63-66), www.cambridge.org/welzel (Online Appendix, p. 12-19), based on data from the World Values Surveys, all countries and time points.

Scaling: Multi-point scale, ranging from a theoretical minimum of 0 when the least secular position is taken on all 3 items, to a maximum of 1.0 when the most secular position is taken on all 3 items. Intermediate positions are given in fractions of 1.0. Country scores are population averages (arithmetic mean) on the 0-1 index.

4.101.40 wel_sys Political System Type

Meaning: 4-fold system typology derived from cross-tabulating democratic rights and honest governance.

Source: Alexander and Welzel (2011); Alexander, Inglehart and Welzel (2012). Categorization is available in annual measures for most countries of the world from 1996 to 2006.

1. "Unbound Autocracy": both democratic rights and honest governance below their scale mid-points
2. "Bounded Autocracy": democratic rights below, honest governance above the scale midpoint
3. "Ineffective Democracy": democratic rights above, honest governance below the scale midpoint
4. "Effective Democracy": both democratic rights and honest governance above the scale midpoint.

Note: In the original data there exists two different observations for Dominica, the value has been recoded to missing for this country.

4.101.41 wel_trgen Generalized Trust

Meaning: Multi-item formative index measuring to what extent trust in others is general, assigning increasing weights to trust's generality from close to unspecified to remote others [(IngTru + 2 * UnsTru + 3 * OutTru) / 6 calculated at the individual level and then aggregated to the country level using the population average].

Source: Index invented and documented in Welzel, *Freedom Rising* (2013: 199-200), www.cambridge.org/welzel (Online Appendix, p. 62-63), based on data from the World Values Surveys, countries from rounds five and six.

Scaling: Multi-point index ranging from 0 when there is no generalized trust to 1.0 for the opposite case, with proper fractions for intermediate positions. Country-level scores are the average of each national sample.

Remarks: Individual-level scores are normally distributed around the mean in each national sample.

Min. Year: 2010 Max. Year: 2014

4.101.42 wel_trigr In-Group Trust

Meaning: 3-item formative index measuring to what extent people trust others to whom they are acquainted.

Source: Delhey, Newton and Welzel (2011), based on the Welzel-trust items in the World Values Surveys, all countries and time points from rounds 5 and 6.

Scaling: 4-point rating scales recoded from lowest trust (0) to highest trust (1) and averaged over the three items. Country-level scores are the average of each national sample.

Remarks: Individual-level scores are normally distributed around the mean in each national sample.

Min. Year: 2010 Max. Year: 2014

 \bar{T} : N/A

4.101.44 wel_trstd Trust (Standard)

Meaning: Dummy coded standard trust question indicating to what extent people believe that they can trust unspecified other people.

Source: World Values Surveys, all countries and time points from rounds 1 to 6.

Scaling: Dummy index standardized into 0 for non-trust and 1.0 for trust in unspecified others. Country-level scores are the average of each national sample, thus transforming the individual-level dummy codes into a continuous 0-to-1.0 scale.

Min. Year: 2010 Max. Year: 2014
N: 56

Min. Year: 1981 Max. Year: 2014
N: 104 n: 286 \bar{N} : 8 \bar{T} : 3

4.101.45 wel_trunsp Unspecific Trust

Meaning: 3-item formative index measuring to what extent people trust others or believe them to be fair when these others are neither specified as close or remote or in any other way [(PerFai + StaTru) / 2 calculated at the individual level and then aggregated to the country level using the population average].

Source: Index invented and documented in Welzel, Freedom Rising (2013: 199-200), www.cambridge.org/welzel (Online Appendix, p. 62-63), based on data from the World Values Surveys, countries from rounds five and six.

Scaling: Multi-point index ranging from 0 when there is no trust and perceived fairness of unspecified others to 1.0 for the opposite case, with proper fractions for intermediate positions. Country-level scores are the average of each national sample.

4.102 World Happiness Report

<http://worldhappiness.report/>
(Helliwell et al., 2015)
(Data downloaded: 2015-10-20)

National Average Happiness The World Happiness Report is a landmark survey of the state of global happiness. The first report was published in 2012, the second in 2013, and the third on April 23, 2015. Leading experts across fields - economics, psychology, survey analysis, national statistics, health, public policy and more - describe how measurements of well-being can be used effectively to assess the progress of nations. The reports review the state of happiness in the world today and show how the new science of happiness explains personal and national variations in happiness. They reflect a new worldwide demand for more attention to happiness as a criteria for government policy.

4.102.1 whr_hap National-level average scores for subjective well-being

National-level average scores for subjective well-being, as measured by answers to the Cantril ladder question asking people to evaluate the quality of their current lives on a scale of 0 to 10, where 0 represents the worst possible life for them, and 10 the best.

(Data downloaded: 2016-09-21)

Autocratic Breakdown and Regime Transitions: A New Data Set Data to identify and analyze autocracy-to-autocracy transitions. Version 1.2. When the leader of an autocratic regime loses power, one of three things happens. The incumbent leadership group is replaced by democratically elected leaders. Someone from the incumbent leadership group replaces him, and the regime persists. Or the incumbent leadership group loses control to a different group that replaces it with a new autocracy. Much scholarship exists on the first kind of transition, but little on transitions from one autocracy to another, though they make up about half of all regime changes.

4.104.1 wr_nonautocracy Non-Autocracy

Variable on what substituted the autocracy. Classes are:

1. Democracy
2. Foreign-Occupied
3. Not-Independent
4. Provisional
5. Warlord
